TAKE UP PELMANISM

for Courage and Clear-Thinking

The Grasshopper Mind

YOU know the people with "Grasshopper Minds" as well as you know yourself. Their minds nibble at everything and master nothing.

At home in the evening they tune in the radio or television—tire of it—then glance through a magazine—can't get interested. Finally, unable to concentrate on anything, they either go to the pictures or fall asleep in the chair. At their work they always take up the easiest job first, put it down when it gets hard and start something else. Jump from one thing to another all the time.

There are thousands of these people with "Grasshopper Minds" in the world. In fact they are the very people who do the world's most tiresome tasks—and get but a pittance for their work. They do the world's clerical work and the routine drudgery.

If you have a "Grasshopper Mind" you know that this is true. Even the blazing sun can't burn a hole in a piece of tissue-paper unless its rays are focused and concentrated on one spot! A mind that balks at sticking to one thing for more than a few minutes surely cannot be depended upon to get you anywhere in your years of life!

What Can You Do About It?

Take up Pelmanism now! A course of Pelmanism brings out the mind's latent powers and develops them to the highest point of efficiency. It develops strong, positive, vital qualities such as Optimism, Concentration, and Reliability, all qualities of the utmost value in any walk of life.

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches **French, German, Spanish,** and **Italian** without translation. Write for particulars and specimen lesson of the language that interests you, which will be sent gratis and post free.

Pelman Languages Institute
200 Norfolk Mansions, Wigmore Street
London, W.1

What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

But Pelmanism does more than eliminate failings It awakens dormant faculties. It develops powers you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops:—

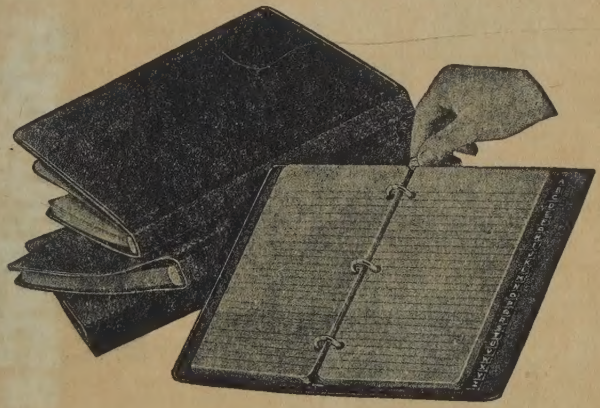
—Optimism	**—Initiative**
—Judgment	**—Reliability**
—Self-Control	**—Will-Power**
—Concentration	**—Resourcefulness**
—Self-Confidence	**—Presence of Mind**

Pelmanists are not left to make the applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

Remember—Everything you do is preceded by your attitude of mind

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.

Send for the Free Book



The Pelman Course is simple and interesting and takes up very little time. You can enrol on the most convenient terms. The Course is fully described in ***The Science of Success,*** which will be sent you, gratis and post free, on application to:—

THE MARK OF QUALITY

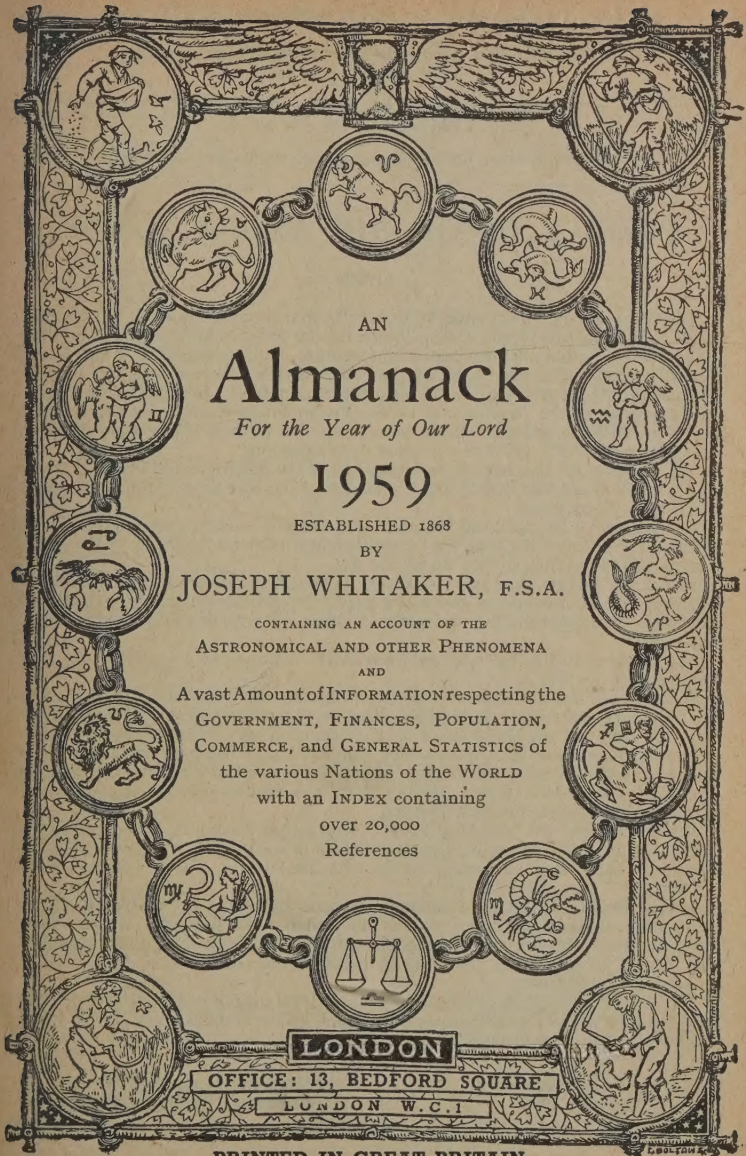
LOOSE LEAF BOOKS

FOR ALL PURPOSES

Highly treasured by professional and business men

Made by the Manufacturers of
WALKER'S DIARIES

Associated with rapid progress in many new fields of electrical endeavour, the BTH symbol continues to express permanent values. Machines themselves may change, but their quality and dependability is constant. BTH provides every stage of every industry with equipment for the generation, distribution, utilisation and control of electric power. Whether you need a sub-station to provide power for the whole plant—or a fractional horse-power motor—BTH machines will serve you well. Here are a few of the many BTH industrial products:



Generators; motors; rheostatic and electronic control gear; switchgear; transformers; rectifiers; high-precision helical gearing; a wide range of electronic devices; ignition equipment; resistors; high-frequency, and induction heating equipment.

OFFICE: 13, BEDFORD SQUARE

LONDON W.C.1

PRINTED IN GREAT BRITAIN

Note—"WHITAKER" for 1959 is published in three editions:—

Library Edition, Leather Binding with 16 Coloured Maps, 1,188 pages — 35*s.* *net*

Complete Edition, Red and Green Cloth Cover, 1,188 pages — 18*s.* 6*d.* *net*

Shorter Edition, Orange Paper Cover, 692 pages — 10*s.* *net*

PREFACE TO THE 91ST ANNUAL VOLUME

(1959)

The Editor has once more endeavoured, in the 91st annual edition of "WHITAKER", while continuing and supplementing all the regular features of the Almanack, to give full scope to matters of great topical importance, and in particular to the feats of scientific development for which the year under review will be memorable.

Thus, details are provided of the various earth satellites launched during the year, of the voyage of the *Nautilus* and of Sir Vivian Fuchs' crossing of the Antarctic continent, and the scientific implications and value of these exploits are discussed. In addition, they are all commemorated by illustrations.

The illustrations also include a photograph of the newly-created Prince of Wales, whose elevation to that title by the Queen during the year gave so much pleasure to Her Majesty's subjects.

The passage of the new Life Peerages Act, whereby women may now for the first time sit in the House of Lords, has been noted, together with the names of the first life barons and baronesses created under the Act.

The policy of providing more statistics illustrating subjects of particular current interest has been maintained and tables have been introduced dealing with aliens in the United Kingdom and their countries of origin and with domestic production and expenditure.

The Diary of Events has been enlarged by the inclusion of a section dealing with sport during the year.

Several fresh features have been added to the municipal section. Following upon the triennial elections last April, the existing party representation on county councils has been recorded and the dates of the charters of incorporation of the English and Welsh boroughs have been supplied for the first time. The pages on London have been augmented by notes on the main railway stations and a list of the Underground and Green Line Coach routes. Finally, there is an entirely new article giving details of all the New Towns in Great Britain.

While certain of the larger Employers' Associations have long been shown in the Almanack among the principal societies, the list of such bodies has now been greatly increased and placed in juxtaposition with the list of Trade Unions in the "Directory" part of the book.

In the Commonwealth and Foreign pages, separate articles are devoted to the new Federation of the West Indies and to the United Arab Republic, and the Postal Regulations section has been further strengthened by the inclusion, in response to requests, of air mail letter rates and by notes on the areas covered by the various London postal districts.

The Editor is always guided by the various helpful suggestions made by the readers of the Almanack and wishes yet again to thank all his many correspondents for the help which they have given him.

"... and I'll leave the residue to a worthwhile cause."

HAIG'S FUND

We would like to remind you that upon the regular replenishment of Haig's Fund depends the existence of the largest welfare organisation in the world — the British Legion. The Legion's responsibilities towards the ex-service community have steadily increased over the years and today commitments are heavier than ever before.

More money is most urgently needed to carry on such vital work as the Legion's Rehabilitation Scheme for disabled ex-servicemen, the maintenance of Country Homes, provision for war orphans, pensions and grants for ex-service people in distress.

Will you therefore please remember that legacies and bequests in favour of Haig's Fund are urgently needed.

BRITISH LEGION HAIG'S FUND

Registered under the War Charities Act, 1940

CLARKSON'S, OLD LONDON

ESTABLISHED OVER A CENTURY

THE SECOND-HAND OPTICAL STORES

Levels, Theodolites, Staves, etc., available for HIRE

338, HIGH HOLBORN, W.C.1

(Opposite Gray's Inn Road.) Telephone: Holborn 2149.

THE ASSOCIATION OF PRACTISING AND COMMERCIAL ACCOUNTANTS LIMITED (BY GUARANTEE)

Fellows and Associates are entitled to describe themselves as Associated Public Accountants and to use the designatory letters—F.P.C.A. and A.P.C.A. Examinations are held in June and December.
For a Syllabus of Examinations and Conditions of Membership write to

The Secretary, STAMFORD HOUSE, LONDON, W.4
Chiswick 6660

The FACULTY *of* SECRETARIES LIMITED (BY GUARANTEE)

Founded in 1930 the Faculty provides a central organisation for Secretaries and Administrative Officers of Public Bodies and Local Government Authorities, and is well represented both at home and abroad including South Africa where there is a large membership.

The examinations have been widely recognised by the Ministry of Labour and by Public and Municipal Undertakings.

Fellows and Associates use the Qualifying letters F.F.C.S., and A.F.C.S., and the distinctive title of "Corporate Secretary".

The official journal is "The Corporate Secretary" published quarterly.

Regulations as to admission to membership, examination syllabus, etc. can be obtained from:

THE ROYAL INSTITUTION OF CHARTERED SURVEYORS

(Incorporated by Royal Charter)

Founded 15th June, 1868

Patron—HER MAJESTY THE QUEEN

A CHARTERED SURVEYOR

is professionally qualified to advise in one or more of the following branches of the profession both at home and overseas.

LAND AGENCY

The management of rural estates ; agricultural valuations ; farm improvements ; and forestry.

VALUATION, SALE, PURCHASE AND MANAGEMENT OF PROPERTY

The valuation of all classes of real property for every purpose ; the management and development of urban estates; and the sale, purchase and letting of property.

HOUSING MANAGEMENT

The development and management of housing estates.

TOWN AND COUNTRY PLANNING

All matters connected with town and country planning and land use.

BUILDING SURVEYING

Building construction and maintenance ; structural surveys; and the treatment of dry rot and other defects in Buildings.

QUANTITY SURVEYING

The preparation of bills of quantities and advice generally upon building specifications, estimates and costs, and upon the value of work executed.

MINING SURVEYING OR MINERAL AGENCY

All types of surveys concerned with mineral properties ; the valuation and management of mineral properties.

LAND SURVEYING

Cadastral, engineering, geodetic, topographical and hydrographic surveying, and photogrammetry.

Where Chartered Surveyors are required for special work or to fill professional appointments, enquiries should be addressed to the Secretary of The Royal Institution of Chartered Surveyors, at

12, GREAT GEORGE STREET, PARLIAMENT SQUARE, WESTMINSTER, S.W.1

Telephone: Whitehall 5322 Telegrams: "Surveyable, Parl., London."

OCCURRENCES DURING PRINTING

The Royal Family and Court

Oct. 16.—The Queen and the Duke of Edinburgh left Balmoral after their holiday and visited Carlisle.

Oct. 17.—The Queen and the Duke of Edinburgh visited Leeds and after attending an evening performance in connection with the Leeds Centenary Musical Festival, stayed at Harewood House.

Oct. 18.—After carrying out further engagements in Leeds and attending the final concert of the Festival, the Queen and the Duke left in the Royal train for London.

Oct. 19.—The restored church of St. Clement Danes was re-consecrated by the Bishop of London as the R.A.F. Memorial Church, in the presence of the Queen, the Duke of Edinburgh, Queen Elizabeth the Queen Mother, Princess Margaret and the Duke and Duchess of Gloucester.

Oct. 20.—Professor Theodor Heuss, President of the German Federal Republic, was greeted at Victoria Station by the Queen and the Duke of Edinburgh on arriving for his state visit. In the evening he was entertained at a banquet at Buckingham Palace.

Oct. 21.—President Heuss was entertained at luncheon at the Guildhall and in the evening gave a dinner and reception at the German Embassy to the Queen, the Duke of Edinburgh and other members of the Royal Family.

Politics

Oct. 8.—The Conservative Party conference opened at Scarborough and carried unanimously a resolution calling for compensation at fair market value for land acquired by public authorities.

Oct. 14.—The Government announced its proposals for a new pensions scheme, with graduated contributions and payments.

Oct. 21.—The first of the new life peers and peeresses took the oath in the House of Lords.

Oct. 23.—Minor Government changes were announced. Lord Mancroft, Minister without Portfolio, and Lord Strathclyde, Minister of State, Scottish Office, resigned and were succeeded by the Earl of Dundee and Lord Forbes. Mr. F. J. Erroll was appointed to the vacant post of Economic Secretary to the Treasury and was succeeded as Parliamentary Secretary to the Board of Trade by Mr. J. C. Rodgers. The Earl of Gosford, Joint Under-Secretary at the Foreign Office and the Marquess of Lansdowne, a Lord-in-Wait ng, exchanged appointments. Mr. E. B. Wakefield became Comptroller of the Household in place of Sir Gerald Wills, who resigned and Mr. M. H. C. Hughes-Young succeeded Mr. Wakefield as a Lord Commissioner of the Treasury.

Aviation

Oct. 4.—Comet jet passenger service across the Atlantic began.

Oct. 22.—B.E.A. Viscount airliner crashed after collision with Italian jet fighter near Anzio, all the passengers and crew, totalling 31, being killed.

Labour

Oct. 21.—B.O.A.C. engineers at London Airport returned to work pending negotiations after being on strike for a week during which time all B.O.A.C. services in and out of the Airport had been stopped.

Commonwealth

Oct. 1.—The British plan for Cyprus took effect. Greek Cypriots staged a strike throughout the island.

Oct. 3.—An English sergeant's wife was murdered by terrorists in Famagusta and another seriously wounded. Archbishop Makarios sent a message to Greek Cypriots urging them to "react vigorously" against implementation of the British plan.

Oct. 7.—President Iskander Mirza of Pakistan declared martial law in the country, dismissed the central and provincial governments, abolished all political parties, abrogated the constitution and appointed Gen. Mohammed Ayub Khan, commander-in-chief of the Army, as chief martial law administrator.

Oct. 13.—The prosecution withdrew the indictment in the South African treason trial, which was adjourned pending possible preparation of a new indictment.

Oct. 16.—The Cyprus Government introduced tighter security measures against terrorism.

Foreign and International

Oct. 5.—The Fifth French Republic officially came into being.

Oct. 6.—The Pope was stated to be gravely ill after a stroke.

The Chinese Communists suspended the shelling of Quemoy and Matsu for one week to allow supplies to be brought in, provided they were not escorted by the Americans. The State Department said that American warships would suspend convoying operations to the offshore islands.

The U.S. atomic submarine *Seawolf* surfaced after record stay underwater of 60 days.

Oct. 9.—After suffering a second stroke on the previous day, Pope Pius XII died in the early hours of the morning.

Oct. 11.—An American rocket, aimed at the moon, was successfully launched from Cape Canaveral, but a slight error in the aiming angle prevented it from reaching its destination and on the following day it was believed to have re-entered the earth's atmosphere and burned out over the Pacific.

Oct. 13.—The Chinese Communists decided to extend the cease-fire in the Quemoy area for a further fortnight.

General de Gaulle issued a strict ban on the Army taking part in politics in Algeria and said the elections there must be entirely independent.

Oct. 14.—The military members withdrew from the Algeria-Sahara committee of public safety.

Oct. 15.—Tunisia broke off diplomatic relations with the United Arab Republic.

Oct. 20.—British troops began withdrawal from Jordan.

Chinese Communists broke the cease-fire and shelled Quemoy heavily.

Oct. 23.—The 1958 Nobel Prize for Literature was awarded to Boris Pasternak, the Russian novelist.

Obituary

Oct. 2.—Dr. Marie Stopes, advocate of birth control, aged 78. Oct. 3.—Dr. George Kennedy Allen Bell, Bishop of Chichester, 1929–58, aged 75. Oct. 8.—Sir Henry Channon, Conservative M.P. for Southend West, aged 61 (by-election pending). Oct. 9.—His Holiness Pope Pius XII, aged 82. Oct. 14.—Sir Douglas Mawson, O.B.E., F.R.S., Antarctic explorer and geologist, aged 76. Dr. Lennox Robinson, Irish dramatist, aged 72. Oct. 16.—Hon. Sir Stephen Henn Collins, former High Court judge, aged 83. Oct. 17.—William Westenra, 6th Baron Rossmore, aged 66. Oct. 22.—Leonard Brassey, 1st Baron Brassey of Apethorpe, former Conservative M.P., aged 88.

PHENOMENA

January 2. Earth at Perihelion, i.e. at least distance (91,500,000 miles) from the Sun.

5d 11h. Jupiter in conjunction with the Moon. Jupiter 2° S.

7d 23h. Saturn in conjunction with the Moon. Saturn 4° S.

10d 11h. Venus in conjunction with the Moon. Venus 6° S.

11d 4h. Mercury in conjunction with Saturn. Mercury 0°·7 S.

18d 23h. Mars in conjunction with the Moon. Mars 5° N.

CONSTELLATIONS

The following constellations are near the meridian at

Mean Longitude of Ascending Node on January 1, 198°.

MONTHLY NOTES

January 1. New Year's Day.

—. Bank Holiday in Scotland.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Dec. 25 last.

6. Dividends on Consols, etc., due.

7. Christmas Fire Insurances must be paid.

** Centenary.

Mean semi-diameter in arc 16′·3; in time 1m 10s.

* In the sense Apparent *minus* Mean. Throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY was at greatest western elongation on December 29, and is a morning star, low in the south-east at sunrise, in the first few days of the month.

VENUS was in superior conjunction in November, and is now moving out from behind the Sun to become an evening star, visible in the south-west at sunset. Magnitude −3·4.

MARS is an evening star in Aries and is in the south in mid-evening. The planet is still a very bright object, but fades rapidly from magnitude −0·6 to +0·2 as its distance from the earth increases from 67 to 93 million miles during the month. Mars passes into Taurus at the end of January, and moves rapidly round the sky during the year; there is no opposition of Mars during 1959, the next one being on December 30, 1960.

JUPITER is a morning star moving direct in Libra, and is in the south at sunrise; magnitude −1·4 to −1·5.

SATURN was in conjunction with the Sun in December, and now begins to rise just before dawn. It will be seen in the constellation Sagittarius throughout the year, and is in opposition in June.

Mean Longitude of Ascending Node on February 1, 196°.

MONTHLY NOTES

February 1. Pheasant and partridge shooting ends.
2. Scottish Term Day.
5. 7 Elizabeth II ends.
6. 8 Elizabeth II begins.
—. New Zealand Day.
8. Half-Quarter D ☽
11. Lent begins (ends midnight March 28).

QUARTER DAYS

(England, Wales and Northern Ireland)

Lady Day.....March 25 *Michaelmas*.....September 29
Midsummer.....June 24 *Christmas*.....December 25

Half-Quarter Days are Feb. 8, May 9, Aug. 11 and Nov. 11.

SCOTTISH TERM DAYS

Candlemas.....February 2 *Lammas*.....August 1
Whitsunday.....May 15 *Martinmas*.....November 11

Removal Terms are May 28 and November 28.

** Centenary.

Mean semi-diameter in arc 16′·2 ; in time 1m 07s.

* In the sense Apparent *minus* Mean. Throughout February subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 14th, but becomes visible as an evening star at the end of the month, low in the west after sunset.

VENUS is a brilliant evening star, to be seen in the west at sunset. By the end of the month the planet is well north of the Sun, and sets about two hours after sunset.

MARS is an evening star in Taurus. It passes south of the Pleiades on the 8th, when it will be about two degrees south of *Alcyone* (mag. +3·0). The planet fades from magnitude +0·2 to +0·8 during the month, but will be a conspicuous object in this part of the sky, particularly towards the end of February, when it will be seen between the star clusters Pleiades and Hyades.

JUPITER rises in the early morning hours in the south-east; it is moving direct in Libra, and its magnitude changes from −1·5 to −1·7 during the month.

SATURN rises about three hours before dawn, and will be seen low in the south-east above the bright stars of the constellation Sagittarius. (Magnitude +0·8.)

URANUS is at opposition on February 3, and is to be found in a rather barren part of the sky to the west of the Sickle of Leo. The planet is about 6 degrees east of the star δ Cancri, which lies just south of the well-known cluster *Praesepe*. Uranus may just be seen by the naked eye; in a telescope it shows a greenish disc of diameter 4″.

26	Th.	Maundy Thursday. A. E. Housman b. 1859**
27	F.	Good Friday [1954
28	S.	Stephen Leacock d. 1944. Francis Brett Young d.
29	S.	Easter Day
30	M.	Easter Monday. E. C. Bentley d. 1956
31	Tu.	Easter Tuesday. Duke of Gloucester b. 1900

PHENOMENA

March 1d 10h. Jupiter in conjunction with the Moon. Jupiter 3° S.

3d 22h. Saturn in conjunction with the Moon. Saturn 4° S.

12d 0h. Venus in conjunction with the Moon. Venus 0° N.

12. Mercury at greatest eastern elongation (18°).

16d 19h. Mars in conjunction with the Moon. Mars 7° N.

21. Vernal Equinox.

24. Partial Eclipse of the Moon. See p. 146.

28d 18h. Jupiter in conjunction with the Moon. Jupiter 3° S.

29. Mercury in inferior conjunction with the Sun.

31d 6h. Saturn in conjunction with the Moon. Saturn 4° S.

CONSTELLATIONS

The following constellations are near the meridian at

d h	d h
Feb. 1 24	Feb. 15 23
Mar. 1 22	Mar. 16 21
April 1 20	April 15 19

Cepheus (below the Pole), Camelopardus, Lynx, Gemini, Cancer, Leo, Canis Minor, Hydra, Monoceros, Canis Major and Puppis (Argo).

PHASES OF THE MOON

	d	h	m
☾ Last Quarter	2	02	54
● New Moon	9	10	51
☽ First Quarter	17	15	10
○ Full Moon	24	20	02
☾ Last Quarter	31	11	06

	d	h
Apogee (251,790 miles)	14	09
Perigee (224,090 „)	26	09

Mean Longitude of Ascending Node on March 1, 195°.

MONTHLY NOTES

March 1. Auditors of Boroughs, Eng. and W., to be elected.

8. Last day for sending list of persons employed in factories.

11. Ramādan begins.

17. Bank Holiday in Northern Ireland.

25. Lady Day. Quarter Day. Accounts of Local Government Authorities, Eng. and W., to be made up to 31st. Quarter Sessions to be held 21 days before or after this date.

27. Good Friday. Banks and Stock Exchange closed.

28. Lent ends at midnight.

30. Bank and General Holiday, England, Wales and N. Ireland.

31. Financial Year 1958–59 ends.

** Centenary.

Mean semi-diameter in arc 16′·1 ; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout March subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest eastern elongation on March 12 and may be looked for in the west after sunset during the period March 7 to 17. The planet Venus is also an evening star at this time, but is much more brilliant and at a much greater elongation from the Sun.

VENUS is now at her best as an evening star, a prominent object in the western sky at sunset. A close conjunction with the crescent Moon on the evening of March 11 will afford a pleasing spectacle; there are several such conjunctions during the year, some of them giving rise to occultations visible in the southern hemisphere (see p. 146).

MARS continues as an evening star and moves rapidly through Taurus, passing 7° north of *Aldebaran* on the 4th. At the end of March the planet is at twice the distance from the earth which it had at the beginning of January, and the magnitude will be only +1·3.

JUPITER is a morning star, rising at midnight in mid-March. The planet is at a stationary point on the 19th, nearly a degree north-west of the third magnitude star β Scorpii, on the borders of Libra and Scorpius. Jupiter is now very low in the sky, being nearly 20° south of the equator. Magnitude −1·7 to −1·9.

SATURN rises in the early hours, and may be seen at dawn low in the south. Saturn's brightest satellite, Titan, is at eastern elongation on March 2 and 18, and at western elongation on March 10 and 26.

A partial Eclipse of the Moon will be visible from this country on the 24th, about a quarter of the Moon being eclipsed in mid-evening (see p. 146).

PHENOMENA

April 8. Annular Eclipse of the Sun. See p. 146.

11d 6h. Venus in conjunction with the Moon. Venus 5° N.

14d 11h. Mars in conjunction with the Moon. Mars 7° N.

25d 0h. Jupiter in conjunction with the Moon. Jupiter 3° S.

26. Mercury at greatest western elongation (27°).

26. Neptune in opposition.

27d 14h. Saturn in conjunction with the Moon. Saturn 4° S.

CONSTELLATIONS

The following constellations are near the meridian at

d	h		d	h

Mean Longitude of Ascending Node on April 1, 193°.

According to the Summer Time Act, 1925, *Summer Time* 1959 should begin at 2 A.M., G.M.T., on April 19 and should end on October 4 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

April 1. Refreshment House Licences to be renewed.

5. Income Tax Year (1958–59) ends.

8. Lady Day Fire Insurances must be paid.

16. Israel Independence Day.

23. First day of Jewish Passover.

** Centenary.

Mean semi-diameter in arc 16′·0; in time 1m 05s.

* In the sense Apparent *minus* Mean. From April 1–16 apply as in March (see page 99) and for the remainder of the month as in May (see page 107).

MORNING AND EVENING STARS

MERCURY is at greatest western elongation on the 26th, but conditions are not favourable for seeing the planet as a morning star in this country.

VENUS continues to shine brilliantly in the western sky at sunset, and remains above the horizon for about three hours after the sun has set. The planet passes about 7° north of *Aldebaran* on the 23rd.

MARS is an evening star and passes into Gemini on the 10th, when it is more than 25° north of the equator. At the end of the month it passes close to the third magnitude star ϵ in this constellation, and the planet is then of about the same brightness as the star Castor (magnitude +1·6).

JUPITER now rises before midnight and is retrograding on the borders of Libra; it still forms an interesting group with the bright stars of Scorpius. The planet is growing noticeably brighter, and reaches magnitude −2·0 at the end of the month.

SATURN is a morning star, reaching a stationary point in Sagittarius on the 16th. After this date its motion is retrograde, and it brightens slowly as it approaches opposition (magnitude +0·6). Titan is at eastern elongation on April 3 and 19 and at western elongation on the 11th and 27th.

NEPTUNE is at opposition on April 26. At the beginning of the year, the planet was actually in Libra, but at opposition it may be found in Virgo, near the border with Libra, almost half-way between the stars κ and λ of Virgo. In a telescope, Neptune shows a greenish disc of diameter $2\frac{1}{2}''$, and magnitude 8.

Mean semi-diameter in arc 15′·8 : in time 1m 07s.

* In the sense Apparent *minus* Mean. Throughout May add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY was at greatest western elongation at the end of April, and is theoretically a morning star, but it is badly placed for observation in this country.

VENUS now sets just before midnight, but as it reaches its greatest northern declination and begins to turn south, it sets earlier each evening. The planet is now almost half a magnitude brighter than it was at the beginning of the year. At the end of the month, Venus will be south of the Twins *Castor* and *Pollux*, and moving towards Mars.

MARS is an evening star, setting about midnight; it moves through Gemini into Cancer at the end of the month. It passes south of *Pollux* on the 21st, and on the last days of the month will be in line with the Twins.

JUPITER is at opposition on the 18th, and is then due south at midnight. The planet is still retrograding in Libra, a few degrees to the west of *Antares* and the bright stars of Scorpius. This is not a very favourable opposition, as the planet is low in the sky, but the phenomena of the satellites are always of interest (see p. 150).

SATURN is still a morning star, retrograding in Sagittarius. The brightness increases during the month (magnitude +0·6 to +0·4) but the planet is very low in the sky for observation in this country. Titan may, however, be seen at eastern elongation on the 5th and 21st, and at western elongation on the 13th and 29th.

30	Tu.	James Gunn b. 1893

Junius, Roman *gens* (family).

Sun's Longitude 90° ♋ 22d 04h

PHENOMENA

June 3. Mercury in superior conjunction with the Sun.

10d 15h. Venus in conjunction with the Moon. Venus 7° N.

10d 18h. Mars in conjunction with the Moon. Mars 6° N.

14d 13h. Venus in conjunction with Mars. Venus 0°·8 N.

18d 11h. Jupiter in conjunction with the Moon. Jupiter 3° S.

21d 5h. Saturn in conjunction with the Moon. Saturn 4° S.

22. Summer Solstice.

23. Venus at greatest eastern elongation (45°).

26. Saturn in opposition.

CONSTELLATIONS

The following constellations are near the meridian at

	d h		d h
May	1 24	May	16 23
June	1 22	June	15 21
July	1 20	July	16 19

Cassiopeia (below the Pole), Ursa Minor, Draco, Ursa Major, Canes Venatici, Bootes, Corona, Serpens, Virgo and Libra.

PHASES OF THE MOON

	d	h	m
● New Moon.....	6	11	53
☽ First Quarter.....	14	05	22
○ Full Moon.....	20	20	00
☾ Last Quarter.....	27	22	12

	d	h
Apogee (252,480 miles)...	4	08
Perigee (223,450 ,,)...	19	13

Mean Longitude of Ascending Node on June 1, 190°.

See note on *Summer Time*, page 102.

MONTHLY NOTES

June 4. Eton celebration day (George III's birthday).

5. Constitution Day, Denmark.

12. Jewish Pentecost (Feast of Weeks) begins.

22. Longest day.

24. Midsummer Day. Quarter Day. Sheriffs of London to be elected by the Liverymen.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following June 24.

** Centenary.

Mean semi-diameter in arc 15′·8 ; in time 1m 09s.

* In the sense Apparent *minus* Mean. From June 1–14 apply as in May (see page 107) and for the remainder of the month as in July (see page 115).

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 3rd, and then becomes an evening star, but will be difficult to see in the bright sky after sunset.

VENUS is at its greatest elongation east of the Sun on the 23rd, but is now south of the Sun, and sets only about two hours after sunset. Venus passes nearly a degree north of Mars on the 14th, and rather more than a degree north of Uranus on the 20th.

MARS is an evening star in Cancer, but passes into Leo at the end of the month. On the night of June 12th, Mars will be found in the southern part of the *Praesepe* cluster, and on the 24th, it passes less than a degree north of Uranus. The planet Mars is now at aphelion, and is about 155 million miles from the Sun and 210 million miles from the earth; by the end of the month it is only of the second magnitude.

JUPITER is still a brilliant evening star (magnitude −2·0) retrograding in Libra.

SATURN is at opposition on the 26th and reaches magnitude +0·2. Although the rings are wide open, the planet is not as bright as it would be at a December opposition, because its distance is much greater. It is now nearing aphelion, at a distance of 840 million miles from the Earth; at a December opposition it would be at perihelion at a distance of about 750 million miles, and fully half a magnitude brighter.

PHENOMENA

July 5. Earth at aphelion, i.e. at greatest distance (94,600,000 miles) from the Sun.

8. Mercury at greatest eastern elongation (26°).

9d 9h. Mars in conjunction with the Moon. Mars 5° N.

9d 23h. Venus in conjunction with the Moon. Venus 3° N.

15d 17h. Jupiter in conjunction with the Moon. Jupiter 3° S.

18d 11h. Saturn in conjunction with the Moon. Saturn 4° S.

26. Venus at greatest brilliancy.

CONSTELLATIONS

The following constellations are near the meridian at

Mean Longitude of Ascending Node on July 1, 188°.

See note on *Summer Time*, page 102.

MONTHLY NOTES

July 1. Special Session for Licences to deal in Game to be held [this month.
3. Dog Days begin (end Aug. 15).
5. Dividends due. Tynwald Day, Isle of Man.
7. Moslem New Year (A.H. 1379).
8. Midsummer Fire Insurances to be paid.
13. Bank and General Holiday, Northern Ireland.
15. Latest date for receiving corrections for next year's "WHITAKER."
21. Belgian Independence Day (1831).
31. Gun and Game Licences expire.

** Centenary.

Mean semi-diameter in arc 15′·8 ; in time $1^m\ 08^s$.

* In the sense Apparent *minus* Mean. Throughout July subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest elongation east on the 8th, but is unlikely to be seen as an evening star during the month.

VENUS is now drawing noticeably nearer to the Sun, and is visible for little more than an hour after sunset; it reaches greatest brilliancy on the 26th, when its magnitude is −4·2. An outstanding event of this month is the occultation of *Regulus* by Venus on the 7th; the phenomenon takes place in daylight (for details see p. 146).

MARS is still an evening star, and forms an interesting group with the stars of the Sickle of Leo. On the 18th Mars passes less than a degree north of *Regulus*, the star (magnitude +1·3) being about three-quarters of a magnitude brighter than the planet.

JUPITER is an evening star and will be seen in the south at sunset. It reaches a stationary point on the 20th, some degrees to the east of α Librae (*Zuben-el-genubi*) and fades slightly during the month to magnitude −1·8.

SATURN is an evening star and is visible in the south in the late evening. It is still much brighter than any of the stars of Sagittarius which will be seen below it. (Magnitude +0·2 to +0·4.) Titan is at eastern elongation on the 8th and 24th, and at western elongation on the 16th.

An occultation of *Aldebaran* by the Moon takes place on July 30, and will be visible in Scotland and northern England (see p. 147).

PHENOMENA

August 5. Mercury in inferior conjunction with the Sun.

6d 22h. Mars in conjunction with the Moon. Mars 3° N.

7d 3h. Venus in conjunction with the Moon. Venus 3° S.

10. Uranus in conjunction with the Sun.

11d 2h. Venus in conjunction with Mars. Venus 7° S.

12d 0h. Jupiter in conjunction with the Moon. Jupiter 3° S.

14d 17h. Saturn in conjunction with the Moon. Saturn 4° S.

23. Mercury at greatest western elongation (18°).

27. Pluto in conjunction with the Sun.

CONSTELLATIONS

The following constellations are near the meridian at

	d h		d h
July	1 24	July	16 23
Aug.	1 22	Aug.	16 21
Sept.	1 20	Sept.	15 19

Draco, Hercules, Lyra, Cygnus, Sagitta, Ophiuchus, Serpens, Aquila and Sagittarius.

PHASES OF THE MOON

Mean semi-diameter in arc 15′·8; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout August subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at inferior conjunction on the 5th and moves rapidly to greatest elongation west on the 23rd. There will be a favourable opportunity of seeing the planet as a morning star low in the dawn sky to the north of east in the last ten days of the month.

VENUS now sets shortly after the Sun and is only likely to be visible as an evening star in the first half of the month.

MARS is also an evening star, and passes from Leo into Virgo at the end of the month. It is now only a second-magnitude object, and is too close to the Sun to be readily visible.

JUPITER is an evening star and now sets before midnight. It is now moving direct again, and fades during the month to magnitude −1·6. The shorter evenings make it possible to observe the phenomena of the four great satellites again (see p. 150).

SATURN is still an evening star, moving retrograde in Sagittarius. Its brightness diminishes during the month to magnitude +0·6. Titan is at western elongation on the 1st and 17th, and at eastern elongation on the 8th and 24th.

The well-known meteor shower of the Perseids comes to a maximum on the 12th; on that date the Moon will be at First Quarter, but it sets before midnight, after which there is always a better chance of seeing a greater number of shooting stars.

PHENOMENA

September 1. Venus in inferior conjunction with the Sun.

4d 12h. Mars in conjunction with the Moon. Mars 1° N.

5d 20h. Mercury in conjunction with Venus. Mercury 11° N.

8d 10h. Jupiter in conjunction with the Moon. Jupiter 3° S.

10d 22h. Saturn in conjunction with the Moon. Saturn 4° S.

17. Mercury in superior conjunction with the Sun.

23. Autumnal Equinox.

29d 18h. Venus in conjunction with the Moon. Venus 2° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d h		d h
Aug.	1 24	Aug.	16 23
Sept.	1 22	Sept.	15 21
Oct.	1 20	Oct.	16 19

Draco, Cepheus, Lyra, Cygnus, Vulpecula, Sagitta, Delphinus, Equuleus, Aquila, Aquarius and Capricornus.

PHASES OF THE MOON

	d	h	m
● New Moon.....	3	01	55
☽ First Quarter.....	9	22	07
○ Full Moon.....	17	00	51
☾ Last Quarter.....	25	02	22

	d	h
Perigee (229,070 miles)...	7	17
Apogee (251,480 „)...	23	01

Mean Longitude of Ascending Node on September 185°.

See note on *Summer time*, page 126.

MONTHLY NOTES

September 1. Partridge shooting begins. Salmon close-time begins.

8. Malta's National Day (1565).

17. Harvest Moon.

28. Sheriffs of London to be sworn in.

29. Michaelmas. Quarter day. Lord Mayor of London elected.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Sept. 29.

** Centenary.

Mean semi-diameter in arc 15′·9; in time 1m 04s.

* In the sense Apparent *minus* Mean. Except on September 1 and 2 (when the rule is reversed) add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 17th, and will not be visible during the month.

VENUS moves to inferior conjunction on the 1st, but moves rapidly out from the Sun to become a brilliant morning star in the east at sunrise. By the end of the month it rises nearly three hours before the Sun.

MARS is now moving direct in Virgo, but set very shortly after the Sun, and will not be seen.

JUPITER is still an evening star, setting about two hours after the Sun; its magnitude fades to −1·4 by the end of the month.

SATURN is an evening star, and will be seen in the south at sunset. It reaches a stationary point on the 5th, and then begins to move direct again; the magnitude fades to +0·7. Titan is at western elongation on the 2nd and 18th, and at eastern elongation on the 9th and 25th.

An occultation of *Aldebaran* by the Moon will be visible throughout the British Isles on the morning of the 23rd at sunrise. A small telescope will be necessary to see this 1st magnitude star disappear at the bright limb of the Moon. (See p. 147 for details.)

	d	h
Perigee (225,970 miles)	4	21
Apogee (252,090 ,,)	20	19

Mean Longitude of Ascending Node on October 1, 184°.

According to the Summer Time Act, 1925, *Summer Time* 1959 should begin at 2 A.M., G.M.T., on April 19 and should end on October 4 at 2 A.M., G.M.T., but other dates may be fixed by Order in Council.

MONTHLY NOTES

October 1. Pheasant shooting begins.
3. Jewish New Year (A.M. 5720).
12. Yom Kippur (Jewish Day of Atonement).
—. Columbus Day, U.S.A.
14. Michaelmas Fire Insurances must be paid.
16. Hunter's Moon.
29. Turkish National Holiday.

** Centenary.

Mean semi-diameter in arc 16′·1; in time 1m 05s.

* In the sense Apparent *minus* Mean. Throughout October add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is an evening star during the month, but will not be favourably placed for observation.

VENUS is a brilliant morning star in the east at sunrise. It is noticeably brighter than it was in the spring when it was an evening star, and at the time of greatest brilliancy on the 8th, it reaches magnitude −4·3. The planet will be seen about 6 degrees south of *Regulus* on the 1st.

MARS is at conjunction on the 30th, and will not be visible during the month.

JUPITER is an evening star, but sets only about an hour after the Sun. It moves into Scorpius during the month, forming an interesting group with the stars of that constellation. On the evening of the 19th it passes less than half a degree south of the third-magnitude star β Scorpii.

SATURN is still visible for an hour or two after sunset in the south-west, but now fades to magnitude +0·8.

A partial Eclipse of the Sun will be visible throughout the British Isles at mid-day on the 2nd; about a third of the Sun's disc will be obscured by the Moon (see p. 146 for details).

Mean Longitude of Ascending Node on November 1, 182°.

MONTHLY NOTES

November 1. Hallowmas. Fox-hunting begins.

8. Remembrance Sunday.

10. Lord Mayor's Day.

11. Martinmas. Scottish Term Day.

—. Half-Quarter Day, Eng. and W.

12. County Sheriffs, Eng. and W., for next year, nominated.

15. Solicitors', notaries', proctors' and sworn clerks' certificates expire. See note, Dec. 15.

26. Thanksgiving Day, U.S.A.

28. Removal Day, Scotland.

** Centenary.

Mean semi-diameter in arc 16′·2; in time 1m 09s.

* In the sense Apparent *minus* Mean. Throughout November add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest elongation east on the 3rd, but conditions are unfavourable for its appearance as an evening star.

VENUS is at greatest western elongation on the 11th, and then rises more than four hours before the Sun; it is now less bright, but is still a magnificent object in the east at dawn.

MARS now appears as a morning star, rising shortly before dawn in the south-east. It is, however, a faint object, and is unlikely to be seen.

JUPITER is an evening star (magnitude −1·3) and passes from Scorpius into the constellation of Ophiuchus. On the 15th its eastward movement carries it 5° north of *Antares*. At the end of the month the planet sets shortly after the Sun.

SATURN may perhaps be seen low in the south-west after sunset (magnitude +0·8). It has now reached its most southerly declination, nearly 23° south of the equator.

An occultation of *Aldebaran* by the Moon, then one day past Full, will take place at a convenient hour in the evening of the 16th (for details see p. 147).

Mean semi-diameter in arc 16′·3 ; in time 1m 11s.

* In the sense Apparent *minus* Mean. From December 1–25 apply as in November (see page 131) and for the remainder of the month as in January (see page 91).

MORNING AND EVENING STARS

MERCURY is at greatest elongation on the 12th, and the planet may perhaps be glimpsed in the south-east at dawn in the first half of the month.

VENUS is still a brilliant morning star, rising more than three hours before the Sun. On the 14th it passes less than a degree north of the planet Neptune, but the latter is only visible in a telescope.

MARS is a morning star in Libra at the beginning of the month, moving direct towards Scorpius and rising about an hour before the Sun. On the 15th the planet will be about 4° north of *Antares*, but its position is then actually in the constellation of Ophiuchus. On the 29th Mars passes less than a degree south of the more brilliant Jupiter. The next opposition of Mars will occur in December, 1960, when the planet will be in Gemini.

JUPITER is in conjunction on the 5th, and will not be visible until the end of the month, when it becomes a morning star. In the New Year the planet, then in the constellation Ophiuchus, will reach its lowest southern declination.

SATURN is also in conjunction this month (31st) and will not be visible. In the spring of 1960 it will be a morning star, still in Sagittarius, and will be at opposition in July.

Another occultation of *Aldebaran*, visible in Scotland, is predicted for the 14th (see p. 147).

Introduction to Astronomical Section

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Nautical Almanac* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0h G.M.T., or the midnight at the beginning of the day named. No allowance is made for Summer Time, the dates of which, although given by the Summer Time Act, 1925, may be altered by Order in Council.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 13th edition, 1957; 17*s.* 6*d.*), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow West, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56°, are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.T.'s for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time if in force.

In accordance with the usual convention in astronomy, + and − indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

The FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

The CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used, in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

The principal PHASES OF THE MOON are the G.M.T.'s when the difference between the longitude of the Moon and that of the Sun is 0°, 90°, 180° or 270°. The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5°, the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. The footnote given each month indicates when the numerical quantities given are to be added and when they are to be subtracted.

The Sidereal Time at 0h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0h) are used for converting mean time to sidereal time and vice versa, as illustrated on page 141.

The time SUN SOUTHS is the G.M.T. of transit of the Sun at Greenwich, or the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Traffic Act, 1956, defines Lighting-up Time for vehicles as being from half an hour after sunset to half an hour before sunrise throughout the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be 34′, and the Sun's semi-diameter to be 16′, the time

given is that when the true zenith distance of the Sun's centre is 90° + 34′ + 16′ or 90° 50′, or, in other words, when the depression of the Sun's centre below the true horizon is 50′. The upper limb is then 34′ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is 90° 50′ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light continues to reach us for some time after sunset, and the interval between sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin and end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

(1) *Sunset*, defined as above.

(2) *Civil twilight*, when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight must cease. In England it varies from about 30 to 50 minutes after sunset.

(3) *Nautical twilight*, when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.

(4) *Astronomical twilight*, when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

These four steps are now tabulated each year in the *Nautical Almanac*. Lighting-up time is a crude attempt to approximate to civil twilight over the British Isles.

Under the heading MORNING AND EVENING STARS will be found notes describing the position and visibility of the planets; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always less by the amount of the horizontal parallax, i.e. nearly 1°.

The lunar terminator is the line separating the bright from the dark part of the Moon's disc. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The tabulated selenographic longitude of the terminator is measured from the mean centre of the visible disc, which may differ from the visible centre by as much as 8°, because of libration. A positive sign indicates westerly longitude, or to the right hand, and applies between New Moon and First Quarter or from Full Moon to Last Quarter. A minus sign indicates easterly longitude and applies from First Quarter to Full Moon and from Last Quarter to New Moon. When the Moon is passing from New to Full the line is called the morning terminator because the Sun is rising on the region of the Moon on which it falls; from Full to New it is the evening terminator. As the terminator changes at New or Full Moon, its longitude changes abruptly from −90° to +90°. Interpolation between two such values may be performed by taking the complement of either of them to 180°, and changing the sign. Thus the value −83° may be treated as +97°, or the value +85° as −95°.

The position angle of the terminator is the position angle of the northern cusp; it is subject to very rapid changes at New and Full Moon. The column PHASE shows the percentage of the area of the Moon's disc illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-axis minor is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about 9″, and is negligible when considering sunrise and sunset, but that of the Moon averages about 57′. Hence the computed time represents the moment when the true zenith distance of the Moon is 90° 50′ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56°. They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be *added* if west (as it usually is in Great Britain) or *subtracted* if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of 1° = 4m and 15′ = 1m.

The column MOON SOUTHS gives the G.M.T.

of transit of the Moon over the meridian of Greenwich. It is independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^h (or 360°) of the longitude, and will be greater than 12^h (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda°/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^h\ 05^m$ east, so $\lambda = 13^h\ 55^m$ and the fraction $\lambda/24$ is 0·58. The transit on the local date 1959 Jan. 7 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich.....Jan.	7	10	24
λ.....		13	55
$0{\cdot}58 \times (11^h\ 22^m - 10^h\ 24^m)$.....			34
G.M.T. of transit at Sydney.....	8	0	53
Corr. to N.S.W. Standard Time....		10	00
Local standard time of transit	8	10	53

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^h\ 55^m$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disc. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

Since the planets cannot be seen when on the horizon, the actual times of rising and setting are not given; instead, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. when the planet souths at Greenwich is also given; it follows columns relating to times when the planet is in the east and precedes those relating to times when the planet is in the west. By this arrangement the times given for any date are consecutive, but it has sometimes been necessary to extend the hours beyond 24; thus Jan. $21^d\ 26^h$ is the same as January $22^d\ 02^h$. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.T.'s of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which, under the Road Traffic Act, 1956, are from half an hour after sunset to half an hour before sunrise throughout the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about 3″ less than the equatorial diameter, while that of Saturn is about 2″ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed in September, 1950, and open at their widest extent in the Summer of 1958.

TIME

Greenwich Mean Time

Time is measured by the rotation of the Earth, and a solar day is the duration of a complete rotation of our sphere with respect to the Sun; it is 4^m longer than a rotation with respect to the stars, because of the revolution of the Earth round the Sun. The length of the solar day varies for two reasons, namely the ellipticity of the Earth's orbit and the fact that the plane of the equator does not coincide with the plane of the ecliptic. Mean time clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. The length of the mean solar day is constant, although that of the apparent day, or the interval from one transit of the Sun across the meridian to the next, varies for the reasons given above.

The mean solar day may be regarded as the period of rotation about the earth of a fictitious body called the Mean Sun, whose motion is uniform; and the zero of measurement is the instant when the Mean Sun is on the meridian. At this instant it is mean noon for all places on that meridian, and Mean Time, measured in this way for some standard meridian, is usually chosen as the standard time for a whole country. It is the use of the meridian of Greenwich which gives rise to the expression Greenwich Mean Time (G.M.T.), which is taken as a standard. For astronomical purposes, G.M.T. is used, the day beginning at midnight, and a 24-hour system being adopted. Thus Greenwich p.m. times, in civil reckoning, must be increased by 12 hours to give G.M.T.

Apparent Solar Time

The time shown by a sundial is called apparent solar time. It differs from mean solar time by the equation of time, which is the total effect of the two causes mentioned that make the length of a

solar day non-uniform. The equation of time reaches its maximum values in February (-14^m) and early November ($+16^m$); it has a zero value on four dates during the year, and it is only on these dates (approximately April 15, June 14, September 1 and December 25) that a sundial shows mean time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. As that point has a slow retrograde motion (50″ a year), known as precession, the length of the sidereal day, or $23^h\ 56^m\ 04^s{\cdot}091$ of mean time, is $0^s{\cdot}008$ less than the true period of rotation. The zero for sidereal time is when the First Point of Aries is on the meridian. In observatory practice sidereal time is found by comparing the observed time of transit of a star, as recorded by a sidereal clock, with the known true time of transit, namely the star's apparent right ascension. Any discrepancy, when adjusted for certain instrumental corrections, is the error of the sidereal clock. From this corrected sidereal time, the error of a mean time clock is found by comparison and computation as described below.

To convert standard mean time to local sidereal time, if many conversions are to be done for any one place, we may form once and for all the constant P, defined as

P = longitude of standard meridian + acceleration corresponding to this longitude − local longitude

where the acceleration of sidereal on mean time is taken from the table on page 145. West longitudes are considered to be positive, but, to avoid any subtractions, negative values of P may be replaced by their complement to 24^h. Then

L.S.T. = sidereal time at 0^h G.M.T. (page II of each month) + P + standard mean time + acceleration corresponding to this time.

Example.—Required the L.S.T. at Melbourne (Long. = $-\ 9^h\ 39^m\ 54^s$) at 1959 February $26^d\ 12^h\ 34^m\ 56^s$ Standard Time (10^h fast on G.M.T.).

	h	m	s
Long. of standard meridian	−10	00	00
Acceleration (same sign)	−	1	39
Sum	−10	01	39
Local long. with reversed sign	+ 9	39	54
P	−	21	45
Complement to 24^h	23	38	15

For the given mean time	h	m	s
Sidereal time (page 95)	10	20	23
P, as found above	23	38	15
Standard mean time	12	34	56
Acceleration from page 145 (always positive)		1	58
			6
Sum = L.S.T.	22	35	38

One line may be saved by making a special table in which P is combined permanently with the acceleration for integral hours. Such a table for Melbourne would have the entry $23^h\ 40^m\ 13^s$ ($= 23^h\ 38^m\ 15^s + 1^m\ 58^s$) for the argument 12^h.

To convert local sidereal time to standard mean time we may first form the constant Q from

Q = local longitude − retardation corresponding to this longitude − longitude of standard meridian.

For Melbourne	h	m	s
Local longitude	− 9	39	54
Retardation from page 145 (opposite sign)	+	1	28
Long. of standard meridian, with reversed sign	+		7
	+10	00	00
Sum = Q	+	21	41

We then have

Standard mean time = *preceding* transit of First Point of Aries (page II of each month) + Q + L.S.T. − retardation corresponding to L.S.T.

To reverse the above example, we first note that the L.S.T. is greater than the complement to 24^h of the transit of Aries, so that the transit required is that on Feb. 25.

	d	h	m	s
Transit of Aries (page 95)	25	13	41	19
Q, as found above			21	41
L.S.T.		22	35	38
Sum	26	12	38	38
Retardation from page 145 (always negative)		−	3	36
		−		6
Sum = standard mean time	26	12	34	56

An alternative method is:

Standard mean time = (L.S.T. − sidereal time at 0^h G.M.T., as tabulated) − retardation corresponding to this difference + Q.

In the example	h	m	s
L.S.T.	22	35	38
Sidereal time at 0^h	10	20	23
Difference	12	15	15
Retardation from page 145 (always negative)	−	1	58
	−		2
Sum	12	13	15
Q, here positive		21	41
Sum = standard mean time	12	34	56

Owing to the omission of decimals of a second from the times given on the monthly pages, the answers obtained by these two methods may differ by one second.

Radio Time Signals

The establishment of a uniform time system by the assessment of the performance of standard clocks in terms of astronomical observations is the work of a national observatory, and standard time is then made generally available by means of radio

time signals. In the United Kingdom, the Royal Greenwich Observatory is responsible for the legal standard of time, and controls the "6-pips" radio signals emitted by the British Broadcasting Corporation. These are of adequate accuracy for normal domestic and commercial needs but for precision users engaged in scientific and survey work special time signals controlled by the Royal Observatory are broadcast by the Post Office each day at 1000 and 1800 U.T. These signals consist of a series of pips marking the seconds, and extending over five minutes: the minute pips are lengthened to facilitate identification. These signals are monitored at the Observatory, and corrections to the times of reception are published. They are normally radiated by Rugby GBR (16 kc/s), with Criggion GBZ (19·6 kc/s) as reserve, together with associated short-wave transmitters.

During recent years there has been a great increase in the number of stations broadcasting standard frequencies with superposed seconds pulses. In the United Kingdom the Post Office transmitter MSF broadcasts standard carrier frequencies of $2\frac{1}{2}$, 5, and 10 mc/s, which are maintained within ± 5 parts in 10^9 of nominal frequency. The frequencies are measured in terms of the caesium resonator at the National Physical Laboratory; the superposed seconds pulses are periodically adjusted to conform to G.M.T. as determined at the Royal Greenwich Observatory.

"*Astronomical*" and "*Atomic*" *Time*

Until recently the periodic motions observed in astronomy have provided the only practicable basis for a standard of time. The diurnal rotation of the Earth on its axis has long served to define the second, and must still remain the basic unit in common usage, but unpredictable irregularities in the period of rotation have led to the search for an alternative. A more uniform time system may be defined in terms of the annual revolution of the Earth around the Sun, and measured in terms of the monthly motion of the Moon around the Earth. Observations of an artificial satellite may also be used, in theory, for the establishment of a uniform time system.

An innovation is the utilisation of atomic and molecular oscillations to define a standard frequency and a unit of time interval. By means of quartz clocks, the time intervals may be integrated over periods of months or years, thus providing an "atomic" or "molecule" time scale.

Comparisons during 1956–1957 between the "atomic" time scale of the caesium resonator at the National Physical Laboratory and G.M.T. indicate a divergence of 5 parts in 10^9 per year, corresponding to an increase in the period of rotation of the Earth amounting to 0·4 milliseconds in a year.

SUMMER TIME IN THE UNITED KINGDOM

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time Acts*, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April, and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the Second World War, the duration of Summer Time was extended, and in some years Double Summer Time was in force. The dates of the actual duration since its inception are:

1916 May 21—Oct. 1	1938 Apr. 10—Oct. 2
1917 Apr. 8—Sept. 17	1939 Apr. 16—Nov. 19
1918 Mar. 24—Sept. 30	1940 Feb. 25—Dec. 31
1919 Mar. 30—Sept. 29	1941 Jan. 1—Dec. 31
1920 Mar. 28—Oct. 25	1942 Jan. 1—Dec. 31
1921 Apr. 3—Oct. 3	1943 Jan. 1—Dec. 31
1922 Mar. 26—Oct. 8	1944 Jan. 1—Dec. 31
1923 Apr. 22—Sept. 16	1945 Jan. 1—Oct. 7
1924 Apr. 13—Sept. 21	1946 Apr. 14—Oct. 6
1925 Apr. 19—Oct. 4	1947 Mar. 16—Nov. 2
1926 Apr. 18—Oct. 3	1948 Mar. 14—Oct. 31
1927 Apr. 10—Oct. 2	1949 Apr. 3—Oct. 30
1928 Apr. 22—Oct. 7	1950 Apr. 16—Oct. 22
1929 Apr. 21—Oct. 6	1951 Apr. 15—Oct. 21
1930 Apr. 13—Oct. 5	1952 Apr. 20—Oct. 26
1931 Apr. 19—Oct. 4	1953 Apr. 19—Oct. 4
1932 Apr. 17—Oct. 2	1954 Apr. 11—Oct. 3
1933 Apr. 9—Oct. 8	1955 Apr. 17—Oct. 2
1934 Apr. 22—Oct. 7	1956 Apr. 22—Oct. 7
1935 Apr. 14—Oct. 6	1957 Apr. 14—Oct. 6
1936 Apr. 19—Oct. 4	1958 Apr. 20.—Oct. 5
1937 Apr. 18—Oct. 3	

DOUBLE SUMMER TIME

1941 May 4—Aug. 10	1944 Apr. 2—Sept. 17
1942 Apr. 5—Aug. 9	1945 Apr. 2—July 15
1943 Apr. 4—Aug. 15	1947 Apr. 13—Aug. 10

SUMMER TIME ABROAD

Variations of the Standard time may be used and the dates of adoption are decided annually. In some countries the variations occur in winter and are called Winter Time†.

British Commonwealth.—	*Foreign Countries.*—	
Bermuda	Albania	Israel
British Honduras†	Azores	Korea
Canada (except Yukon)	Brazil	Macao
Channel Islands	Parts of China	Madagascar
Hong Kong	Formosa	Madeira
	Hungary	Morocco
	Iceland	Pescadores Is.
	Indo-China	Poland
	Irish Republic	Portugal
		Parts of U.S.A.

Some of the astronomical information in this ALMANACK has been taken from the *Nautical Almanac*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

Standard Time

In the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used. In some countries (†) Standard Time is no longer used and the time given in the table below is that in normal use.

The large territories of the United States, Canada and U.S.S.R. are divided into zones approximately 7½° on either side of central meridians. The important ones are given below; there are in addition zones from 5 to 13 hours fast in the U.S.S.R. centred at 60° E. to 180° E.

Fast on Greenwich Time.

12 hrs. F...Fiji, Gilbert and Ellice Is., New Zealand, Marshall Is., Caroline Is. (east of 160° E.).
11½ „ F...Norfolk I., Nauru I.
11 „ F...New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk, Ponape.
10 „ F...Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (west of 160° E.), Australian Capital Territory, Marianas Is.
9½ „ F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area), Dutch New Guinea.
9 „ F...Manchuria, Japan, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kuril Is.
8½ „ F...Moluccа Is., Korea.
8 „ F...East China, Hong Kong, Philippine Is., Labuan, Macao, Timor, West Australia, Celebes, Sarawak, N. Borneo, Formosa, Pescadores Is.
7½ „ F...Federation of Malay, Singapore, Indonesian Borneo and Java.
7 „ F...China (on the Yangtze Kiang from Chungking to Shasze), Hainan I., Pakhoi, S. Sumatra, Christmas I. (Indian Ocean), Thailand, Indo-China, Cambodia, Laos, Viet Nam.
6½ „ F...Burma, Andaman and Nicobar Is., Cocos-Keeling Is., N. Sumatra.
6 „ F...Pakistan (East).
5½ „ F...India, Portuguese India, Ceylon, Laccadive Is.
5 „ F...Chagos Archipelago, Pakistan (West).
4 „ F...Mauritius, Seychelles, Réunion, 'Oman, U.S.S.R., 40° E. to 52°30' E.
3½ „ F...Iran (Persia).
3 „ F...U.S.S.R. west of 40° E., Iraq, Eritrea, Aden, Socotra I., Somaliland, Comoro Is., Madagascar, Uganda, Kenya, Tanganyika, Zanzibar, Estonia, Latvia, Lithuania.
2 „ F...Turkey, Greece, Bulgaria, Roumania, Finland, Egypt, Israel, Jordan, Syria, Cyprus, Rhodesia, Union of South Africa and Protectorates, Mozambique, Republic of Sudan Belgian Congo (East), Cyrenaica †, Crete, Lebanon, Tripolitania.

1 hr. F...Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France †, Luxemburg †, Spain †, Gibraltar †, Monaco †, Balearic Is. †, Poland, Austria, Hungary, Switzerland, Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, French Equatorial Africa, Cameroons, Belgian Congo (West), Angola, Spitzbergen, Algeria, Dahomey, Corsica †, Sardinia.

Mid-European.

Greenwich Time..Great Britain, Ireland, Faroë, Channel Is., Portugal, Morocco, Mauritania, Sierra Leone, Ivory Coast, Togoland, Ghana, Principé I., French Guinea, Senegal, St. Helena, Gambia, Canary Is. †, Ascension I., Tristan Da Cunha.

Slow on Greenwich Time.

1 hr. S...Iceland, Madeira, Portuguese Guinea.
2 hrs. S...Azores, Cape Verde Is., Fernando Noronha I., Scoresby Sound, South Georgia.
3 „ S...Greenland (excluding Scoresby Sound and Thule), Eastern Brazil, Uruguay, Argentina †.
3½ „ S...Newfoundland, Labrador, Dutch Guiana.
3¾ „ S...British Guiana.
4 „ S...Canada east of 68° W., Greenland (Thule Area), Puerto Rico, Lesser Antilles, Central Brazil, Falkland Is., Paraguay, Bermuda, Bolivia, French Guiana, Chile.

Atlantic

4½ hrs. S...Venezuela, Curaçao I.
5 „ S...Canada from 68° W. to 85° W. (north) or 90° W. (south), Eastern States of U.S.A., Jamaica, Bahama Is., Cuba, Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador, Dominican Republic.

Eastern.

6 hrs. S...Central parts of U.S.A., Canada from 85° W. (north) or 90° W. (south) to 102°W., Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.

Central.

7 hrs. S...Canada from 102° W. to 120° W., Mountain States of U.S.A., part of Mexico.

Mountain.

8 hrs. S...Canada west of 120° W., Alaska (south-east coast), Western States of U.S.A.

Pacific.

9 hrs. S...Alaska N. of Cross Sound to 141°W., Yukon.
10 „ S...Alaska from 141°W. to 162°W., Low Archipelago, Marquesas, Austral and Society Is., Hawaii, Christmas I. (Pacific Ocean), Fanning I.
11 „ S...Aleutian Is., Alaska (west coast), Samoa, Midway Is.

In the Tonga Islands the time *12h. 20m.* fast and in Chatham Is.† *12h. 45m.* fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° S.	180°	15° S.	172½°W.	53° N.	170° E.
51° S.	180°	5° S.	180°	65½° N.	169°W.

The local mean time of sunrise or sunset (as defined on page 138) may be found by determining the appropriate hour angle from the table above and subtracting it from or adding it to the time of "Sun Souths" given in the ephemeris for each month. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12^h fast on G.M.T.) of sunset on May 24 at Auckland. The latitude is 36° 50′ south (or minus) and the longitude $11^h\ 39^m$ east. Taking the declination as +20°·6, we find

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1′ throughout the year for all latitudes up to 60°.

Example.—On July 4 at $23^h\ 17^m$ G.M.T. in longitude $2^h\ 34^m$ west, the altitude of *Polaris* (corrected for dip, etc.) is found to be 41° 56′.

The local sidereal time is found by the method given on page 141 to be $15^h\ 32^m$. Hence

	°	′
Observed altitude	41	56
Correction from table		+51
Latitude	42	47

MEAN AND SIDEREAL TIME

Acceleration							Retardation

7	1	09	19	3	07	39	34	7	7	1	09	19	3	07	39	40	7
8	1	19	20	3	17	45	39	8	8	1	19	20	3	17	45	46	8
9	1	29	21	3	27	51	44	9	9	1	28	21	3	26	51	53	9
10	1	39	22	3	37	57	49	10	10	1	38	22	3	36	57	59	10
11	1	48	23	3	47	60	00		11	1	48	23	3	46	60	00	
12	1	58	24	3	57				12	1	58	24	3	56			

The length of a sidereal day in mean time is $23^h\ 56^m\ 04^s{\cdot}09$. Hence 1^h M.T. $= 1^h + 9^s{\cdot}86$ S.T. and 1^h S.T. $= 1^h - 9^s{\cdot}83$ M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument are in the form known as Critical Tables. To use these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these two entries is the required acceleration or retardation. Thus the acceleration for $11^m\ 26^s$ (which lies between the entries $9^m\ 07^s$ and $15^m\ 13^s$) is 2^s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column *above* the given tabular entry; e.g. the retardation for $45^m\ 46^s$ is 7^s.

Example.—Convert $14^h\ 27^m\ 35^s$ from S.T. to M.T.

	h	m	s
Given S.T.	14	27	35
Retardation for 14^h		2	18
Retardation for $27^m\ 35^s$			5
Corresponding M.T.	14	25	12

For further explanation, see page 141.

The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1959

ECLIPSES, 1959

In 1959 there will be three eclipses, two of the Sun and one of the Moon.

1. A partial eclipse of the Moon on March 24, visible in the British Isles. The shadow of the Earth first appears at the upper left edge of the Full Moon at $19^h\ 16^m$, and reaches maximum phase at $20^h\ 11^m$, when 27 per cent of the upper part of the Moon will be obscured. The shadow passes off the upper edge of the Moon at $21^h\ 07^m$. This eclipse will be visible generally throughout Europe, Africa, Asia and Antarctica.

2. An annular eclipse of the Sun on April 8, invisible in this country. The track of the annular phase begins in the South Atlantic Ocean and passes from south-west to north-east across Australia, to end in the Pacific Ocean. The maximum duration of the annular phase is about $7\frac{1}{2}$ minutes. A partial eclipse will be seen in all parts of Australasia and the East Indies.

3. A total eclipse of the Sun on October 2, visible as a partial eclipse in the British Isles. The path of totality begins in the eastern United States, crosses the Atlantic Ocean and north Africa to end in the Indian Ocean. The maximum duration of the total phase will be a little more than three minutes. At Greenwich the Moon will be seen to pass from right to left across the lower part of the Sun's disk. The eclipse begins at $11^h\ 01^m$, reaches greatest phase (33 per cent. of the lower part of the Sun being obscured) at $11^h\ 58^m$, and ends at $12^h\ 56^m$. These events occur a minute or two earlier at places to the north or west of Greenwich.

OCCULTATIONS, 1959

A series of occultations of *Aldebaran* (α Tauri, magnitude 1·1) begins on July 30, and these phenomena are visible from the northern hemisphere. The occultations of July 30, September 23, November 16 and December 14 will be visible in the British Isles.

The planet Venus will be occulted by the Moon on March 12 (visible in central America), October 28 (South America) and November 27 (South Africa, Australasia).

The outstanding event of the year 1959 will be the occultation of *Regulus* by Venus on July 7. This unusual event has not hitherto been recorded, and is of some importance since accurately-timed observations can lead to an improved value of the diameter of the planet. The occultation occurs in daylight hours, and some optical aid will be necessary. Venus at this time, 14 days after greatest eastern elongation, will be of magnitude $-4{\cdot}1$, and *Regulus* magnitude 1·3; the occultation will begin for the British Isles at about $14^h\ 20^m$ and will last for about 10^m only. The planet is moving direct at the time, and disappearance will take place at the dark limb.

OCCULTATIONS OF STARS

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6·5 are normally included, and reappearances to fifth magnitude only. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (P), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29′, Long. 0°) and Edinburgh (Lat. 55° 56′, Long. 3° 11′ west). The coefficients a and b are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a.\Delta\lambda + b.\Delta\phi$ to the given G.M.T.

As an illustration the disappearance of α Tauri on November 16 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude	0·0	+3·2
Long. of Liverpool	+3·0	+3·0
$\Delta\lambda$	+3·0	−0·2
Latitude	51·5	55·9
Lat. of Liverpool	53·4	53·4
$\Delta\phi$	+1·9	−2·5
	h m	h m
G.M.T.	18 32·0	18 38·9
$a.\Delta\lambda$	+0·3	−0·0
$b.\Delta\phi$	+2·7	−4·0
G.M.T. at Liverpool	18 35·0	18 34·9

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No occn.	= star not occulted.
Low	= star's altitude less than 10°.
Sun	= Sun not sufficiently below the horizon.
Graze	= occultation is of very short duration.

It will be noticed that in some cases the coefficients a and b are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the Star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3^s a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between $+20''$ and $-20''$ according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

δ Cephei, mag. 3·7 to 4·4. Spectrum F5 to G0.

Thus in London (Lat. 51° 30′) the meridian altitude of *Sirius* is found thus:

	°	′
Altitude of equator	38	30
Declination south	16	40
Difference	21	50

The Altitude of *Capella* (Dec. +45° 58′) at lower transit is:

	°	′
Altitude of pole	51	30
Polar distance of Star	44	02
Difference	7	28

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 138). The stars *Sirius* and *Canopus* and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars as faint as the twentieth magnitude may be photographed by long exposures with the largest telescopes.

Jupiter's satellites transit across the disc from east to west, and pass behind the disc from west to east. The shadows that they cast also transit across the disc. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east of the planet. At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

Owing to the inclination of the plane of the satellites to the Sun and the Earth there are no phenomena of satellite IV during the year.

The list of phenomena given includes most of the eclipses and some of the shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse
Sh. = Shadow transit
c. = commences
f. = finishes

The Structure of the Universe

The Solar System, although occupying a volume of space large by terrestrial standards, is only a very tiny fraction of the whole Universe. The Sun itself is just one of the millions of stars which make up our Galaxy, and our Galaxy is just one of the millions of galaxies which are distributed through the visible Universe. All these stars and galaxies are in motion, many of them with enormous velocities; yet they are so remote that to the naked eye they present almost the same configurations for a period of many thousands of years, and even with telescopic aid the measurement of their motions is a delicate matter. The nearest star is about 250,000 times as far away as the Sun, the Great Nebula in Andromeda, one of the few galaxies visible to the naked eye, is over 500,000 times as far away as the nearest star, and the largest telescopes can penetrate to a distance of at least 500 times that of the Andromeda Nebula. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes $1\frac{1}{3}$ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; four years from the nearest star; two million years from the Andromeda Nebula, and about 1000 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many light years distant. Astronomers also use another unit of distance, the parsec. 1 parsec equals 3·26 light years.

THE STARS

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. Stars as faint as the sixth magnitude can be seen by the naked eye. Stars fainter than this are not visible to the naked eye; the 200-inch telescope, the world's largest, on Mount Palomar in California, can photograph stars of the 23rd magnitude, which is about 650 million times fainter than the first magnitude. This large range in the apparent brightness of the stars is due to a combination of two factors. The first of these is distance. According to a standard law of optics, the apparent brightness of any given luminous object is inversely proportional to the square of its distance away. Thus, if two similar stars are at distances one of which is 10 times the other, the more distant star will appear to be 100 times fainter than the nearest star. The second factor affecting the apparent brightness of a star is its real intrinsic brightness. There are many different kinds of stars; some are very large luminous objects, others are small and faint.

The distances of the stars can be determined in a variety of ways. The direct trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit; this is always done photographically. The distances of about 15,000 stars have been measured in this way, but the method has very little accuracy for distances greater than about 250 light years. For more distant stars, distances may be estimated from a study of their spectra. The distances of some double and variable stars can be found from their special characteristics. A star is said to be at a distance of one parsec if the radius of the Earth's orbit round the Sun subtends an angle of one second of arc at the star. As mentioned earlier, light takes 3·26 years to travel a distance of one parsec.

When the distance of any star has been determined, and its apparent magnitude measured, the real intrinsic brightness of the star may be determined. As a convenient convention, astronomers adopt as the "absolute magnitude" of a star (or other object) that apparent magnitude which the star would have if it were moved from its real position to a distance of ten parsecs. Conversely, if the absolute magnitude of a star is known by spectroscopic or other methods, and its apparent magnitude is observed, its distance may be calculated.

STELLAR SPECTRA

A large number of stars have been examined spectroscopically, and it is found that their spectra fall, with very few exceptions, into a sequence of types, denoted by the letters O, B, A, F, G, K, M; the types merge imperceptibly one into the next. O and B stars, exemplified by the three stars which form Orion's belt, have spectra showing helium and hydrogen lines. A stars, like *Vega* and *Sirius*, are characterized by very strong hydrogen lines. F, G and K stars, like *Procyon*, our *Sun*, and *Arcturus*, respectively, have spectra showing large numbers of metallic lines, and hydrogen lines much weaker than in A stars. Finally, the M stars, like *Betelgeuse* and *Antares*, show very complex molecular spectra, chiefly of titanium oxide. This sequence of spectral types O to M is essentially a temperature sequence, the O stars being the hottest and the M stars the coolest. Approximate values of the surface temperatures of the stars are, a value for the middle of each type being quoted in degrees Centigrade: O, 30,000°; B, 18,000°; A, 10,000°; F, 7000°; G, 5500°; K, 4500°; M, 3000°. The sequence O to M is also a sequence of colour, the O stars being the bluest and the M stars the reddest. The colour of a star is capable of precise definition and measurement; there is a very close correlation between colour and surface temperature, and between colour and spectral type. The latter correlation is so good that for many astrophysical purposes colour measurements are used instead of spectral types. There is the further advantage that colours can be measured for stars too faint for study by spectroscopic techniques.

When the spectral types (or colours) of a large number of stars are correlated with their absolute magnitudes, a surprising result emerges. The sequence O to M is one of decreasing absolute brightness. Approximate values of the absolute magnitudes of the stars are, a value for the middle of each type being quoted: O, −4; B, −2; A, +1; F, +3; G, +5; K, +7; M, +11. A graphical illustration of this relation between spectral type and absolute magnitude is known as the Hertzsprung-Russell Diagram (or, when colours are used

instead of spectral types, as a colour-magnitude diagram). The relationship represented by this diagram is one of the corner stones of modern astrophysics. The above series of stars of types O to M and absolute magnitude decreasing from -4 to $+11$, or fainter, is known as the "main sequence", and a large proportion of all known stars are members of this sequence. A relatively small proportion of the stars of spectral types O to M do not belong to the main sequence. Closer examination of the spectra of these stars reveals slight differences between their spectra and ordinary stars of nominally the same type on the main sequence. These differences are sufficiently characteristic to enable the two types of stars to be segregated spectroscopically without independent knowledge of their absolute magnitudes. These stars are found to be brighter than the corresponding main sequence stars of the same types. Most of those of types G, K and M have absolute magnitudes about 0; many of those of types O to F and a few of types G to M are still brighter, with absolute magnitudes ranging from -4 to -7. The exceptional brightness of these stars is believed to be due to their sizes: those with absolute magnitudes about 0 are called giants, those of -4 to -7 are called supergiants.

The sizes of the stars have been determined mostly by calculation from known surface temperatures and absolute magnitudes. In very few cases direct determinations have been made by means of an interferometer, and sizes can also be inferred from observations of some eclipsing binary stars. The Sun is 864,000 miles in diameter. The main sequence is found to be a sequence of diminishing radii; an O star has a radius of about 20 times that of the Sun, while an average M star has a radius of one-third of the Sun. The giant stars of types G to M have radii between 10 and 100 times the Sun; supergiants have radii between 30 and 1000 times the Sun.

It is possible to determine the chemical composition of a star from a study of its spectrum. This has been done for main sequence stars and for giants and supergiants. All the stars appear to be of the same chemical composition, about 80 per cent by numbers of atoms being hydrogen, most of the remainder helium, heavier elements being less than one per cent of the total. All the differences between types O to M and main sequence, giant and supergiant stars can be accounted for by variations of surface temperature and of size (affecting the spectrum through the surface gravity).

A few stars cannot be classified according to the standard sequence O to M. Among these those classified as R and N stars show strong bands of carbon compounds instead of the titanium oxide of M stars, and the S stars show zirconium oxide instead of titanium oxide. A number of still less common types of stars show anomalous lines of strontium, barium, manganese, silicon, europium, lanthanum and other elements. The reasons for all these peculiarities are not known; it is probable that many of them are genuine differences from the standard chemical composition of the majority of the stars.

DOUBLE STARS

Many stars which appear single to the naked eye are found to be double in the telescope. These are frequently found to be in orbital motion round one another in periods varying from about one year to many thousands of years. Some binary stars are so close together that they cannot be seen separately even in large telescopes; their binary nature is revealed by the spectroscope. The varying motions of the stars in their orbits can be seen through the Doppler shifts of lines in their spectra. The periods of these stars, known as spectroscopic binaries, varies from a few hours to a few years. Some spectroscopic binaries are of special interest in that during their orbital motion the two components periodically eclipse each other, and the combined light of the two stars will vary. This happens when the Earth is nearly in the plane of the binary star orbits. Such binaries are called eclipsing variables, of which the best known is Algol, or β Persei, a star normally of the second magnitude.

VARIABLE STARS

We have already referred to the eclipsing variables, whose light variation is due to a geometrical cause. Some single stars vary in light. These include Cepheid variables, with periods of from a few hours up to about fifty days, long-period variables with periods of from a hundred to a thousand days, and numerous types of variable stars in which the periods and light fluctuations are entirely irregular. Many of these variations are attributed to pulsation of the stars by alternate expansion and contraction. The Cepheids are of particular interest because of the period-luminosity relation: the longer the period of a Cepheid the brighter is its mean absolute magnitude. An observation of the period of variation of the star immediately tells us its absolute magnitude and thence its distance.

Novæ are stars whose light increases by 10 to 15 magnitudes in a few days, and then fades gradually to normal brightness, reached a year or two later. The cause of the brightening is the sudden expansion of the star, but the reason for this is unknown. Supernovæ are stars whose brightness increases by up to 20 magnitudes; they are believed to be caused by the explosion of the whole star.

STAR CLUSTERS

Stars frequently occur in clusters; two types of clusters are known. The first, called open (or galactic) clusters, are groups of up to two or three hundred stars; the second, globular clusters, contain over one hundred thousand stars. The open clusters are found mainly in the neighbourhood of the Milky Way, the globular clusters avoid the Milky Way. Several open clusters are visible to the naked eye: the Pleiades, the Hyades and Praesepe are the best known of these. The colour-magnitude diagrams of open clusters are generally similar to those of nearby single stars; the most important difference is that when a cluster contains blue O and B stars it does not also contain red giant stars. The colour-magnitude diagrams of globular clusters are very similar among themselves, but

differ greatly from the diagrams of galactic clusters and nearby stars. The main sequence does not exist in any globular cluster for stars of types O, B and A; red giants are present in all the clusters, and they range up to absolute magnitude −3. There is an additional sequence of stars with absolute magnitudes about 0 which is quite unlike any sequence in the diagrams for nearby stars.

INTERSTELLAR MATTER

The space between the stars is not empty; it contains a mixture of gas and dust which serves to dim the light of distant objects and tends to make them appear redder than normal. Very distant objects may be obscured completely if they lie in or near the plane of the Milky Way. The density of interstellar gas averages one atom in each cubic centimetre; this may be compared with a density 26 million million million times as great in ordinary air at normal pressure and temperature. As is the case for cosmic material in general, hydrogen predominates in interstellar gas. In addition to this widely distributed matter, there are denser clouds of gas and dust existing locally. These are frequently in evidence as dark clouds in front of a brighter stellar background. Some clouds have hot stars embedded, and the interstellar gas may then shine either by reflection of the starlight or it may be heated until it glows and emits its own characteristic light. Such dense glowing clouds are termed galactic nebulæ. Sometimes the cloud is more regular in shape and is excited by one star; such clouds are termed planetary nebulæ, and the Ring Nebula in Lyra is an excellent example of these objects. Planetary nebulæ are among the denser interstellar formations; their densities range up to 20,000 atoms per cubic centimetre. Hot stars can make ordinary interstellar gas glow even when the density is low; the spherical region of glowing gas surrounding a hot star is termed an ionized-hydrogen region. These regions are of particular interest for the study of the Galaxy and of extragalactic nebulæ because they are relatively bright and can be seen at large distances.

THE GALAXY

A cursory glance at the sky is sufficient to show that the fainter stars are concentrated towards the region of the Milky Way. This implies that the stars form a flattened system, which extends farther in the direction of the Milky Way than it does at right angles to it. It is now known that this system, called the Galaxy, is about 100,000 light years in diameter, and has a thickness of less than 5000 light years. The Milky Way is the centre plane of the system. We in the Solar System are situated at about 27,000 light years from the centre, and not far from the central plane. All the objects mentioned earlier, single and multiple stars, variable stars, novæ and supernovæ, galactic and globular clusters, interstellar gas, dust and galactic and planetary nebulæ, form part of the Galaxy. The distribution of these various objects in the Galaxy are not all alike. The hot O and B stars, galactic clusters and interstellar matter are closely concentrated towards the Milky Way plane, mostly lying within 300 light years on either side of the plane. The stars of types A to M tend to be less closely concentrated to the plane; globular clusters show hardly any concentration, forming a nearly spherical distribution stretching to over 30,000 light years from the plane. Most Cepheid variables with periods of more than a day are closely concentrated to the galactic plane; those with periods of less than a day have a distribution similar to that of globular clusters.

The Galaxy has a spiral structure similar to that of some extragalactic nebulæ. This structure was first shown by studying the positions of O and B stars; these stars trace out spiral arms. Radio astronomers subsequently found that interstellar hydrogen gas emits radio waves on 21 centimetres wavelength. Studies of this radio radiation has enabled the density and distribution of interstellar hydrogen to be determined. The hydrogen gas is found to be situated along the same spiral arms as the O and B stars. Indeed, there is a remarkably close correlation between O and B stars and interstellar matter.

Observations by both optical and radio methods have proved that the whole Galaxy is rotating about an axis through its centre perpendicular to the galactic plane. The period of rotation varies with distance from the centre, an average value being 200 million years. The total mass of the Galaxy is about 100 thousand million times the mass of the Sun.

STELLAR POPULATIONS

The two different types of colour-magnitude (or Hertzsprung-Russell) diagram mentioned above appear to apply not only to star clusters but to other objects in our Galaxy and in other galaxies. There seems little doubt that there are two fundamentally different types of stellar population: Population I has a colour-magnitude diagram similar to that of nearby stars and open clusters, Population II has a diagram similar to that for globular clusters. Population I includes both open clusters, longer-period Cepheid variables and supergiant stars, and is intimately associated with interstellar matter; it occurs prominently in the spiral structure of our Galaxy, and is generally concentrated towards the galactic plane. Population II includes the globular clusters, short-period Cepheids and other objects, tends to avoid the spiral structure of the Galaxy, has little or no interstellar dust associated with it, but may be associated with interstellar hydrogen gas, and is not concentrated towards the galactic plane. All the available evidence suggests that Population II stars are old objects, with ages averaging 5000 million years, while Population I stars are much younger, with ages in a few cases of only a few million years.

EXTRAGALACTIC NEBULÆ

Outside our own Galaxy there are large numbers of objects having a more or less hazy appearance on photographs. These are the extragalactic nebulæ, also known as external galaxies. Some show a well-defined spiral structure, some are elliptical in form with no marked structural features, and some are irregular in form. The spiral nebulæ consist of a central bulge surrounded by spiral arms embedded in a disk-shaped structure. The elliptical nebulæ and

NEBULÆ AND CLUSTERS

Object	Constellation	R.A. h m	Dec. °	Description
47 Tucanæ	Tucana	0 22	−72·4	2nd finest globular cluster, 42′ diam., lucid
M31	Andromeda	0 40	+41·0	Great Spiral Nebula, 2° × ½°, lucid
Nub. Minor	Tucana	0 50	−73·9	Lesser Magellanic Cloud, 10 sq. deg., lucid
M33	Triangulum	1 31	+30·4	Spiral nebula, 1° × ½°
H VI 33, 34	Perseus	2 18	+56·9	Double cluster, each 36′ diam., lucid
Pleiades	Taurus	3 45	+23·9	Open cluster, 1½° × 1°, lucid
Hyades	Taurus	4 26	+15·8	Open cluster, 3° across, lucid
Nub. Major	Dor.-Mensa	5 25	−69·3	Greater Magellanic Cloud, lucid
M1	Taurus	5 32	+22·0	"Crab" nebula, 3′ × 1′
M42	Orion	5 33	− 5·4	"Great" nebula, lucid, round θ Orionis
30 Dor.	Dorado	5 39	−69·1	"Looped" nebula and cluster
M 44	Cancer	8 37	+20·2	"Præsepe" or "Beehive" cluster, 1° sq.
η Carinæ	Carina	10 43	−59·4	"Keyhole" nebula, 80′ diam.
κ Crucis	Crux	12 51	−60·1	Loose cluster, 10′ diam., just lucid
ω Centauri	Centaurus	13 24	−47·1	Finest globular cluster, 45′ diam., lucid
M51	Can. Ven.	13 28	+47·4	Bright double spiral nebula
M3	Can. Ven.	13 40	+28·6	Globular cluster, 18′ diam., lucid
M13	Hercules	16 40	+36·6	3rd finest globular cluster, 15′ diam., lucid
M7	Scorpius	17 51	−34·8	Bright open cluster
M20	Sagittarius	17 59	−23·0	"Trifid" nebula, 20′ diam.
M8	Sagittarius	18 01	−24·4	"Lagoon" nebula, 25′ diam., lucid
M57	Lyra	18 52	+33·0	"Ring" nebula, 1′ diam.
M27	Vulpecula	19 57	+22·6	"Dumb Bell" nebula, planetary, 5′ diam.

M = Messier. H = Sir W. Herschel. Lucid = visible to unaided eye.

the central bulges of the spiral nebulæ are believed to be composed of stars of Population II. The spiral arms are composed of Population I and some Population II, together with large quantities of gas and dust. The presence of dust is evident because of the dark patches of absorption which are a feature of the photographs of spiral nebulæ; the presence of hydrogen gas has been proved by the observation of regions of glowing gas and by the reception of radio waves on 21 centimetres wavelength. In a few of the nearer galaxies individual stars have been observed, and comparison with stars in our own Galaxy provides estimates of the distances and sizes of the galaxies. Many of them are found to be comparable with our own Galaxy—with diameters of 100,000 light years and masses 100 thousand million times the Sun. The two Magellanic Clouds are the nearest galaxies to our own, their distances being about 140,000 light years. The best known external galaxy is the Great Nebula in Andromeda, at a distance of 2,000,000 light years; this spiral nebula is believed to be similar to our own Galaxy in size and stellar content. Extragalactic nebulæ frequently occur in large clusters, each containing hundreds of nebulæ. Many extragalactic nebulæ are in rotation in a manner similar to our own Galaxy and with comparable periods.

RADIO STARS

In addition to the 21 centimetre hydrogen radiation received from interstellar gas, radio noise is received on other wavelengths. Some of this originates in well-known objects; one important source of radio noise is the Crab Nebula, which is known to be the remains of the supernova of A.D. 1054. Some extragalactic nebulæ are also sources of radio noise, but many of the apparently isolated sources, "radio stars", do not seem to coincide with any visible stars or nebulæ. A few strong sources have been identified with peculiar extragalactic nebulæ, and in other cases the source appears to be two colliding nebulæ. There is a growing feeling that many of the radio stars may be very distant objects, perhaps even beyond the range of optical telescopes. The process by which the radio waves are generated has not yet been explained.

COSMOLOGY

The large scale problems of the Universe are concerned with the motions and distribution of the extragalactic nebulæ through the observable region of space. It has been found that in spite of the tendency of nebulæ to cluster together, on a still larger scale the nebulæ are distributed remarkably uniformly. Observations have shown that distant nebulæ have spectra showing "red-shifts", which have been interpreted as Doppler shifts due to velocities of recession; all the distant nebulæ appear to be moving away from us with velocities proportional to their distance. This suggests that the whole Universe is in expansion. There are two rival theories of the cause of this expansion. One postulates a gigantic initial explosion some 5,000 million years ago. The other postulates a steady state, with continuous creation of matter producing new galaxies which eventually force the existing ones to continually increasing distances. Observations have not yet succeeded in distinguishing between these theories.

The Solar System

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The Sun is the ultimate source of most of the chemical energy available on the Earth. Hence the origin of that energy, which reaches the Earth in the form of light and heat from within the Sun, is of particular interest. The spectral distribution of the light from the Sun's surface indicates a temperature of about 5,700° C., but a relatively short distance inside the surface the temperature reaches 1,000,000° and deeper in the interior, near the centre, it is believed to be in the region of 14,000,000°. Now the constitution of the Sun is similar to that of the Earth, as is shown by similarities in the chemical spectra of solar and terrestrial sources; but at these high temperatures the atoms become stripped of their outer layers of electrons. In this highly "ionized" state the substance of the Sun acts in much the same way as a "perfect gas" does on the Earth, even though the density is high. Furthermore, the thermal velocities are sufficiently great for nuclear collisions to take place. Nuclear energy can be released in the Sun by a variety of collision-processes, in each of which the light atoms of hydrogen, by far the most abundant element, are ultimately combined into the heavier atoms of helium. This energy, released almost entirely in the central regions, is transmitted by radiation and convection to the cooler outer layers of the Sun and thence to outer space, a very small proportion of it falling onto the Earth. It is possible to infer with some certainty, by considering the Sun as a typical star, that this process has been going on for about three thousand million years and that it may be expected to continue similarly for perhaps a further ten thousand million years.

As viewed in a low-power telescope provided with heavily absorbing filters, the Sun presents various features. Over most of its surface a fine mottling can be seen under good observing conditions. This "granulation" is visible evidence of a turbulent convective layer near the surface. Much more noticeable surface-markings called sunspots appear sporadically in the equatorial zones of the Sun and up to latitudes of 40°–50° north and south. These sunspots, which are sometimes visible to the naked eye, provide direct evidence of the rotation of the Sun on an axis which is inclined about 7° to the line joining the poles of the ecliptic. They also indicate that the Sun does not rotate as a solid body but somewhat faster in equatorial regions than at higher latitudes. Its mean sidereal rotation-period is about 25 days but the motion of the Earth in its orbit around the Sun results in an apparent rotation-period, as viewed from the Earth, of approximately 27 days. Associated with sunspots are bright regions called faculae but these can not be seen when the spot is near the centre of the disk.

Sunspots vary in size from small dark specks, barely visible in a telescope, but actually with an area of about a million square miles, to large dark markings several thousand times as great. The largest spot ever measured (1947 April) covered 7,000 million square miles at its greatest, or approximately 0·7 per cent. of the Sun's visible surface. Correspondingly, sunspots have lifetimes ranging from a few hours in the case of some of the smallest, to many weeks in the case of the most persistent spots, which are often regular in shape but not as a rule particularly large. The frequency of spots varies in a definite eleven-year cycle, though the number of spots may vary considerably in a haphazard way from week to week in a particular year. One of the observed properties of spots during the 11-year cycle is that high latitudes, north and south, are predominant towards the beginning of a cycle, while later on there is a gradual drift of the most densely occupied zones towards the equator. In addition, a strong magnetic-field is found to be associated with sunspots, as well as certain systematic drifts in the solar layers there. These and other observed properties, such as concern the detailed structure and movements of spots.

ELEMENTS OF THE SOLAR SYSTEM

Orb	Mean Distance from Sun: Radii of Earth's Orbit	Mean Distance from Sun: Millions of Miles	Sidereal Period	Synodic Period	Inclination of Orbit to Ecliptic	Diameter	Mass compared with Earth	Period of Rotation on Axis
			y d	Days	° ′	Miles		d h m
Sun	...	...	...	...	...	864,000	333,434	25 09
Mercury	0·39	36	88	116	7 00	3000	0·04	88

must be explained by any comprehensive physical theory of sunspots. At present no generally accepted theory exists, though it seems clear that the magnetic field of the spot inhibits convection in the turbulent layers near the Sun's surface and so produces local cooling.

The Table below gives dates of recent maxima and minima of the sunspot cycles. It will be seen that the intervals between successive maxima (or minima) vary considerably from the average value of 11·1 years.

Maxima		Minima	
1837·2	1907·0	1833·9	1901·7
1848·1	1917·6	1843·5	1913·6
1860·1	1928·4	1856·0	1923·6
1870·6	1937·4	1867·2	1933·8
1883·9	1947·5	1878·9	1944·2
1894·1		1889·6	1954·3

The present sunspot maximum (1957–58) is unusual in its absence of giant spots, the intense activity being due to a very large number of smaller spots; the previous maxima in 1937–38 and 1947–49 were also notable for great activity.

Other features of the Sun may be detected in light of wavelengths other than those of normal integrated visual light. With the light from the centre of strong spectral absorption lines such as Hα, the C-line of hydrogen, or the H and K lines of calcium, bright regions can almost always be seen around sunspots and these regions occasionally become exceptionally bright for periods of an hour, or thereabouts. This is the phenomenon of the "solar flare", and its occurrence may be otherwise detected upon the Earth by immediate changes in propagation-conditions for long-distance radio-communication (changes in the ionosphere caused by a sudden increase in ionizing radiation) or, in the case of large flares, by the subsequent occurrence, a day or two later, of a magnetic storm. A very few large flares have had associated with them increases, occurring a few minutes later, of the high-energy cosmic-ray flux detected at the earth's surface.

Also visible in monochromatic wavelengths are the prominences, which extend outwards from the Sun's surface into its tenuous outer regions, called the corona. At the limb prominences appear as bright forms, often arched or branching, while against the Sun's disk they appear as dark filaments. The corona itself can normally only be observed in its brightest regions by using light from certain bright spectral lines in special instruments at a high altitude on the Earth. At lower altitudes, and in the outer corona at high altitudes, scattered sky-light is too great. However, when the Sun is obscured by the Moon at a total solar eclipse, the whole corona becomes easily seen. As well as the bright lines, it shows a weak continuous spectrum. It is also found that the corona has characteristically different appearances at sunspot maximum and sunspot minimum and that it frequently shows streamers extending outwards several million miles. When observed with radio wavelengths in the range 10 cm. to 5 m. the corona is normally detected, as well as short-lived emissions from disturbed regions around sunspots.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west, as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 13° to 28°. The planet is best placed for naked eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in England at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutin-

ized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. The question of whether Mercury has an atmosphere cannot be regarded as settled.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Its apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of its orbit, its elongations extend as far as 47°. Venus is the brightest planet and is several times brighter than any star; it can often be seen in full daylight with the naked eye.

Apart from the beauty of its phases, Venus is a disappointing object in the telescope, its extensive atmosphere being so highly reflective, probably owing to cloud, that its true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent.

Photographs of Venus in violet light were taken by Kuiper in 1950 and 1954 with the 82-inch reflector of the McDonald Observatory in Texas, and show that the surface of the planet is banded, three or more dark and bright bands being noted lying in a direction perpendicular to the terminator. These bands have been attributed to zones of ascending and descending currents in the atmosphere of Venus. Assuming that the bands are parallel to the equator, Kuiper deduced the position of the pole of Venus at $3^h\ 32^m$, $+81°$, which is in Cepheus. The equator of Venus is therefore tilted at an angle of about 32° to its orbit. Further observations will be required to deduce the speed of rotation of the planet, but it is considered that this cannot exceed a few weeks.

The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1956, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for its surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 6 inches aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41½ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, and the infra-red absorption spectra of the polar caps support this view. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that

there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo change of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The question of the so-called Martian "canals" is very controversial. Most skilled observers would probably deny the very existence of these excessively thin linear markings, attributing them to optical or physiological effects. To speculate on their being the work of intelligent beings is therefore, to say the least, premature.

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently, however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are over 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none have ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock flying round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 421 miles in diameter, Pallas 280, Juno 150 and Vesta 241 miles.

The periodic times of the revolutions about the Sun vary considerably around an average of $4\frac{1}{2}$ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1931, when carefully planned photographic recording of the planet and the surrounding stars, enabled measures of its distance to be made, and hence a new value of the distance of the Sun from the Earth (the solar parallax) to be deduced.

Similarly, certain other minor planets with suitable orbits can be used for special purposes, as in the precise measurement of the equinox and equator, or in finding the masses of Mercury or Venus.

JUPITER

Jupiter, the largest planet, has a volume over 1000 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately $9^h\ 50\frac{1}{2}^m$, while most of those in higher latitudes give periods between $9^h\ 55^m$ and $9^h\ 56^m$, the transition from the shorter to the longer being usually quite abrupt. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about + 25°; the last outbreak of such spots occurred in 1939.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878–80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times.

The spectroscope shows that Jupiter's atmosphere contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the

surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order − 120° C., which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

Jupiter has four principal satellites—the first celestial objects discovered by telescope by Galileo. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury. A fifth, very much smaller and fainter and nearer to Jupiter, was discovered visually by Barnard in 1892; this satellite has the most rapid motion of any in the solar system. Seven other satellites have been discovered photographically but all are minute objects; the four outermost of these have retrograde motion and are so greatly disturbed by the solar attractions that their orbits are not even approximately elliptical.

Intense but irregular bursts of radio noise were detected at the Carnegie Institute at Washington in January, 1955, on wavelengths of 13·5 and 10 metres; these signals were received only during the few minutes while Jupiter was crossing the aerial beam. Similar evidence has been obtained from other quarters, and an investigation is now being made to discover possible correlations between these radio outbursts and the times at which visible markings on the belts of Jupiter transit across the centre of the disk.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^h\ 15^m$, in higher latitudes $10^h\ 38^m$ has been found in the northern hemisphere and $10^h\ 37^m$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disc is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

Among the more interesting results obtained from measurements of infra-red absorption spectra with the 82-inch reflector of the McDonald Observatory in Texas are those of the constitution of Saturn's rings and the five inner satellites. The only substance which gives similar absorption bands to those observed would appear to be frost deposited on a material at very low temperatures. The absorption curve is quite characteristic, and seems to be governed by the size of the frost crystals. Similar curves are given by the polar caps of Mars, but not by snow or ice. Estimates of the masses of Saturn's rings and of the five inner satellites show that their densities cannot be far from unity, and it is provisionally suggested that they are all composed of ice. Evaporation will be negligible at the low temperatures prevailing, and the small particles of which the ring is composed will suffer little or no loss.

Saturn has nine satellites, of which the largest Titan, is easily seen with a small telescope. Titan is the largest satellite in the solar system, and the only one which shows definite evidence of possessing an atmosphere. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phœbe, has a retrograde motion.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disc, which is quite obvious, though less than 4″ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. The period of rotation of Uranus has been determined spectroscopically to be $10\frac{3}{4}$ hours; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disc of well over 2″ in diameter. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

The planet was found in 1846 as a result of calculations, made independently by J. C. Adams and Le Verrier, which gave the position of an unknown planet which was responsible for perturbations of the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has two satellites, of which the inner, Triton, was discovered by Lassell soon after

the discovery of the planet. Triton revolves about Neptune in a retrograde direction at a distance a little less than that of the Moon from the Earth.

The other satellite, found by Kuiper in 1949, revolves in the normal direction in a period of about a year. Its orbit is remarkably eccentric, and the satellite's distance from Neptune varies from 800,000 to over 6 million miles.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th–15th magnitude.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18·6 years.

The Moon, whose diameter is 2160 miles, rotates in the same time that it revolves ($27^d\ 7^h\ 43^m$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of 29½ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars, the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon, although in this Almanack the name is always given to the Full Moon of September. The next Full Moon is called the Hunters' Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25 and 1949 January 24–26) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when it may appear brighter than the Galaxy in its brightest area.

Recent work shows that the zodiacal cloud is a continuation of the Sun's corona, and that much of this fine dust must fall on the earth every day. The particles are much too small, however, to become visible (by incandescence) as they fall through the atmosphere, and there is evidence to show that they settle in the form of micrometeorites. These probably act as centres of condensation in the formation of rain.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors, shooting-stars or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. The orbits of some of these streams, Lyrids, Pons-Winneckeids,

Perseids, Giacobinids, Leonids, are known to be closely similar to those of certain comets, but modern work on the measurement of meteor velocities by photographic and radar methods has given very different results for the other streams. Thus the Geminids and the November Taurids have been shown by Whipple (from photographic results) to have small but eccentric orbits, more like those of minor planets. The radar methods of studying meteors have the advantage of being equally useful in daylight, and unaffected by cloud. Besides making measurements of the major showers noted above, the radar technique has shown the presence of a number of extensive showers in daylight hours, particularly in the summer months. These also show the same type of small eccentric orbit as those determined by Whipple.

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 10 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Fireballs would seem to have a different origin from the ordinary shooting star, and probably arise from the belt of minor planets. The largest fireballs, when not completely consumed, land on the earth as meteorites. The largest meteorite found weighs 30 tons, and considerable collections are to be seen in our museums. Very large falls were recorded in Siberia in 1908 and 1947, while craters (formed presumably by large meteorites) are found in Arizona, Ungava and elsewhere. At the other end of the scale are the micro-meteorites which are too small to become incandescent in the atmosphere and which drift slowly down to the earth's surface.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 100 million miles—a fine spectacle. The majority of comets are still found accidentally, and it is rare for any observer to search for these objects. There have been unusually few bright ones for nearly half a century, and the two naked-eye comets which appeared in 1957 (Comet Arend–Roland in April, and Comet Mrkos in August) therefore aroused considerable interest.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. According to a recent theory, the earthy material is held together by various "ices"—masses of frozen gases such as ammonia, carbon dioxide and methane —which, on approaching the Sun, begin to evaporate. The pressure of the Sun's radiation is great enough to repel these gases, together with fine dust, and thus form a tail. As the comet approaches the Sun, it grows brighter and as it recedes it grows fainter again, the tail now preceding it in its journey away from the Sun.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, move in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, and whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (1), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

Apart from these two annual comets there are five periodic comets for which predictions have been made of returns in 1959. These are the short period comets Wolf (1), Honda-Mrkos-Pajdusakova, Arend and Giacobini-Zinner. All of these are faint objects, but the last is of some importance because of its association with the meteor shower of October 9th. Further information about these comets may be found in the British Astronomical Association's *Handbook* for 1959.

The Earth

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7927 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5·5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}°$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second. It makes a complete rotation on its axis in about $23^h\ 56^m$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (*see* p. 140). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^h\ 50^m$ interval between consecutive meridian passages of the Moon. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward.

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is diminishing by about a thousandth of a second per day every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a light bar of iron rubbed with a piece of the commonly occurring iron ore, magnetite or lodestone, was subject to a directing force impelling it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-north-west at the end.

In 1576 Robert Norman, an English instrument maker, was impressed by the fact that a compass needle perfectly balanced before magnetization, was no longer in balance after being magnetized, but its north-seeking end was always lower. He devised an instrument to show that, in London, the needle would incline at about 72° to the horizontal if allowed to swing in a vertical plane defined by the direction indicated by an ordinary compass needle.

William Gilbert, physician to Queen Elizabeth I, gave the first approximately correct explanation of the then known facts. Magnetized needles behave as if in proximity to a large magnetized sphere, which he conceived to be the Earth itself.

It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634,

found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates slowly through a small angle every day. The movement is eastwards till about 8 a.m., then rather quickly westwards till about 2 p.m., after which there is a gradual return eastwards. The amplitude may be as much as 15′ in the summer.

The compass needle points along a magnetic line of force passing through the "magnetic poles." At these poles a freely suspended magnetized needle would be directed into the vertical. The north magnetic pole was located by Sir James Ross in 1831 in Arctic Canada at 70° N., 97° W. The Norwegian explorer, Amundsen, in 1904, placed the position about 35 miles north-east of Ross's site. Recent investigations by Canadian surveying parties indicate a position of approximately 73° N. 100° W., but the lines of force do not converge radially upon this point tending rather, on the north side, to concentrate into a channel. From observations by members of Mawson's Australian Antarctic Expedition in 1912 the inferred position of the South magnetic pole was approximately 71° S. 151° E. Results obtained during a French Antarctic Expedition in 1951–2 suggest a position in close agreement with that obtained from an analysis of the field, viz. 67° S. 142° E. The two magnetic poles are thus not antipodal, the line joining them passing the centre of the Earth at a distance of about 700 miles. The distances of the magnetic poles from the north and south geographical poles appear now to be about 1,000 and 1,600 miles respectively.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 5° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

It is evident that the compass needle will not, in general, indicate true north. For example, in Greenland it points 50° to the west, and in British Columbia 30° to the east. A line, running through places where the magnetic and true north coincide is known as an agonic line. One such passes from Hudson Bay through Ontario, Ohio, Carolina, the Bahamas, over South America to Buenos Aires and the South Atlantic; a second, from Sweden and the Baltic, across Poland to Rumania, Asia Minor, Egypt and Ethiopia, whence it passes south of Arabia, across northern India to China and eastern Russia, returning through the north-western Pacific Ocean to Siam, and thence through Sumatra to West Australia.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Combination of the two phenomena suggests that a whole cycle may perhaps occupy several hundred years; it is uncertain whether an exact repetition would then follow.

London			Greenwich		
1580	11° 15′	E.	1820	24° 21′	W.
1622	6 00	E.	1840	23 20	W.
1657	0 00		1860	21 14	W.
1692	6 00	W.	1880	18 33	W.
1723	14 17	W.	1900	16 29	W.
1773	21 09	W.	1920	14 09	W.
1805	24 08	W.	1925	13 10	W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart. The earliest world-chart of magnetic declination was published in 1701 by Edmund Halley, later Astronomer Royal. Charts of other magnetic elements, such as horizontal intensity, vertical intensity, and dip are also published.

Since the secular change in long periods is not predictable with sufficient accuracy in many parts of the world, information on the subject has to be obtained from fixed observatories. Magnetic surveys both by sea and land must also be undertaken periodically.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1959 is 7° 45′ west and allowing an increase of 15′ for each degree of latitude northwards and one of 33′ for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about 7° 45′ +45′+165′, i.e. 11° 15′ west. The average annual change at the present time is about 7′ decrease.

The phenomena of terrestrial magnetism have been the subject of continuous study at fixed observatories since early in the 19th century. The number of such observatories now approaches 200 —widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Hartland, North Devon, at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands. The new Hartland Observatory (a department of the Royal Greenwich Observatory) came into operation in 1957 to take the place of the magnetic observatory at Abinger, Surrey which ceased to operate later in the year. The mean values of the magnetic elements at Abinger are given below.

The phenomena of terrestrial magnetism are due primarily to a field of magnetic force emanating from within the Earth, the origin and behaviour of which is still not satisfactorily explained, and secondarily to magnetic fields imposed from without by the flow of streams of ions or electric currents in the higher regions of the atmosphere. It is undoubted that the latter effects are closely associated with the position of the Sun and with the

state of activity of that body, for the diurnal oscillation of the needle everywhere follows *local* time, and is also more than twice as great in summer as in winter in temperate latitudes. Again, it is considerably larger during years of increased solar activity (as indicated by the occurrence of many sunspots) than in the quiet years.

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's field is subject for several hours to marked disturbance, indicated by continuous irregular movements of the recording magnets and accompanied in many instances by a widespread display of auroræ. In severe magnetic storms, induced earth-currents also develop which seriously interfere with telegraphic communication. The disturbances are generally ascribed to the passage of the Earth through vast streams of ions or electrified particles that have been expelled from the Sun during an explosive outburst at the solar surface. Such eruptions can be seen and photographed. Often a conspicious spot has been apparent near the centre of the Sun's disc a day or two before; but the appearance of a spot is by no means always followed by the occurence of a magnetic storm. There is a tendency for disturbances to recur after intervals of 27 or 28 days, corresponding closely to the apparent period of rotation of the Sun on its axis; this would be explained if the source of the disturbance were located on a particular area of the Sun's surface.

The Zodiac

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about 50″ a year is due to precession; the signs no longer coincide with the constellations whose names they bear.

It is unknown when or by what race the stars were first grouped into constellations; but undoubtedly the twelve figures that lie in the Zodiac have been considered of special importance from very early times, for indications of them are found more often than any others on ancient monuments. The First Point of Aries must have coincided with this constellation rather more than 2000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy.

Much mystical erudition has been bestowed upon the Signs of the Zodiac, but we are on surer ground in noting that Mazzaroth (Job xxxviii, 32), which means to encircle or surround, was the Hebrew name for the Zodiac. The latter word is evidently of Greek derivation.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright, black stone about 2½ feet high and 1½ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Bagdad and its date is estimated to be about 1187–1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page 1 of each month.

These times of entry in 1959 are shown in the Table below with the names of the signs and their symbols.

SIGNS OF THE ZODIAC

In 1959 the Sun enters—	d	h

The Standard Ports referred to in the heading are given in italic.

EXAMPLE.—Required times of high water at Stranraer on *April* 6, 1958:—

(a) *Morning Tide.*

Appropriate time of high water at *Greenock* .....23*h.* 15*m.* *April* 5.
Add tide interval.....11*h.* 53*m.*

Sum.....35*h.* 8*m.*
Subtract 24*h.* .....24*h.* 0*m.*
Time of high water at Stranraer, *April* 6*th* ..11*h.* 8*m.* a.m.

(b) *Afternoon Tide.*

Appropriate time of high water at *Greenock* .... 11*h.* 35*m.* *April* 6.
Add tide interval.....11*h.* 53*m.*

Sum.....23*h.* 28*m.*
Subtract 12*h.* .....12*h.* 0*m.*
Time of high water at Stranraer, *April* 6*th* ..11*h.* 28*m.* p.m.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20–400 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500–2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALÆOZOIC (Old Animal Life) PERIODS include:—

Cambrian,* *Ordovician and Silurian* rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterized by N.E.–S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 100 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.–W. lines of hills and valleys, and some N.–S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R. *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of life PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period icesheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100–200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(*a*) Early Glaciations (probably 2), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(*b*) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago

(*c*) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.

(*d*) A long interglacial phase with high sea level, but less high than during (*b*). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(*e*) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(*f*) An interglacial phase with fairly high sea level, less high than during (*d*). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(*g*) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(*h*) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kroomdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene. The late Dr. Broom inferred that *Australopithecus prometheus* made use of fire, *i.e.*, was, at any rate, near-human.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937–41) have emphasized the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenoorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Galilee, and a skull from Broken Hill, Rhodesia, are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its discoverer, Marston, has won widespread support for his view linking it with modern types.

Controversy over the Piltdown skull and jaw is ended. The skull is dated by Oakley's method as late Pleistocene, or later, so the old name *Eoanthropus* is inappropriate. The ape-like jaw is found to be modern and to have nothing to do with the skull.

With the last retreat of the ice sheets it seems that the Neandertal group, and probably the Pithecanthropus group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cro-Magnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 8 or 7 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillean and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skilfully by pressing off flakes. The Magdalenian stage next following used flakes but specialized in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palæolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods, thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterized by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardized at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs, working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, northwest Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 139). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until midnight. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (*see* p. 139) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (Tiw=God of War), Wednesday (Woden or Odin), Thursday (Thor), Friday (Frig=wife of Odin), and Saturday are derived from Old English translations or adaptations of the Roman titles (Sol, Luna, Mars, Mercurius, Jupiter, Venus and Saturnius).

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial or Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365·2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not leap year unless its number is divisible by 400 (*e.g.* the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 $165\frac{8}{9}$, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini* 1959—*Anno Lucis* 5959. This *Year of Light* is based on the Book of Genesis 1: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4,000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: *e.g.* Regnal year 7 of the present Queen began on Feb. 6, 1958. The system is used for dating Acts of Parliament. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V, c. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII, and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII., and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI and 1 Elizabeth II.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on March 25 and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1751. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in *Scotland* was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal, and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365¼ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time three of the four years in the Leap Year cycle have the longest day on June 21, one on June 22. By the end of the century the longest day will fall each year on June 21.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time one year of the Leap Year cycle has the shortest day on Dec. 21 and the rest on Dec. 22, but in roughly the last quarter of the century the shortest day will fall on Dec. 21 in two years of each four and on Dec. 22 in the remaining two years. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The date Nov. 9 is in accordance with Act of Parliament (24 Geo. II. c. 48), A.D. 1752. The Lord Mayor was previously

elected on the day of the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 15 in 1346, and after some further changes was finally fixed for Michaelmas Day in 1546, as it now is, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) *Cycle.*—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in *figures of gold* on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) *Cycle.*—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction (28 × 19 × 15).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (*i.e.* about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June, July and August. Mid-summer Day being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (*i.e.*, about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (*i.e.* about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1959 is MMDCCXII (2712), A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days *before* the next coming point, the first *and* last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 183. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissextus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty-eight days, and in Leap Year twenty-nine

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (*see* p. 181). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The *difference* between the Old and New Styles was 11 days after 1752, 12 days after 1800, and has been 13 days since 1900. It happened that a change of the beginning of the year from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The Dominical Letter is one of the letters A–G which are used to denote the Sundays (Lord's Days) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1—Feb. 29, the second for March 1—Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of

1964	Feb. 12	March 29	May 7	May 17	xxvi	Nov. 29

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first Day in *Lent*) can fall at earliest on February 4 and at latest on March 10.
Easter Day can fall at earliest on March 22 and at latest on April 25.
Ascension Day can fall at earliest on April 30 and at latest on June 3.
Whit Sunday can fall at earliest on May 10 and at latest on June 13.
Rogation Sunday is the Sunday next before *Holy Thursday* (Ascension Day).
Trinity Sunday is the Sunday next after *Whit Sunday*.
Corpus Christi falls on the Thursday next after *Trinity Sunday*.
There are not less than xxii and not more than xxvii *Sundays after Trinity*.
Advent Sunday is the Sunday nearest to November 30.

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, *opposite the sum obtained*, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (*See* p. 183.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; *e.g.* 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

exceptional importance from the time of the Nicene Council (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, *e.g. Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maundy Thursday, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter-Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be *the first Sunday after the second Saturday* in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, *e.g.* the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are Candlemas (Feast of the Purification), Whitsunday (a fixed date), Lammas (Loaf Mass) and Martinmas (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (*see* also p. 223) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptised. But other derivations have been suggested. An early writer says: "This day is called Wyte Sonday because the Holy Ghost brought Wyte and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (*born* 1118; *murdered* Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (*see Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the

25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 25 or on April 24, the year being a leap year.

Thistle Sunday (*Scotland*) is the first Sunday after St. Andrew's Day.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and Abib was to be the first month of the year. In the First Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II., a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (*Circ.* 120 B.C.) which differ little from those adopted at the present day. The year 5719 (1958–59 A.D.) is the 19th year of the 302st *Metonic* (Minor or Lunar) *Cycle* of 19 years and the 7th year of the 205th *Solar* (or Major) *Cycle* of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 minims. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Nisan), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19 these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two. In practice, in a month which follows one of 30 days, the day preceding its first day is also observed as a day of New Moon. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which

JEWISH FASTS AND FESTIVALS

Tishri 1 Rosh Hoshanah (New Year).
" 2 .. " (2nd day).
" 3 *Fast of Gedaliah.
" 10 Yom Kippur (Day of Atonement).
" 15–22 Succoth (Feast of Tabernacles).
" 21 Hoshana Rabba.
" 22 Solemn Assembly
" 23 Rejoicing of the Law.
Kislev 25 Dedication of the Temple.
Tebet 10 Fast of Tebet.
Adar 13 §Fast of Esther.
" 14 Purim.
" 15 Shushan Purim.
Nisan 15–21 Passover.
Sivan 6 and 7 Shavuot (Pentecost or Feast of Weeks).
Tammuz 17 *Fast of Tammuz.
Ab 9 *Fast of Ab.

A.M. 5719 (known as 719 in the short system) is an Embolismic Deficient year of 13 months, 54 Sabbaths and 383 days.

A.M. 5720 (720) is a Common Abundant year of 12 months, 51 Sabbaths and 355 days.

A.M. 5721 (721) is a Common Regular year of 12 months, 51 Sabbaths and 354 days.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day.
§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion.

The Jewish day begins between sunset and nightfall. The time used is that of the meridian of Jerusalem, which is *2h. 21m.* in advance of Greenwich Mean Time. Rules for the beginning of Sabbaths and Festivals were laid down for the latitude of London in the eighteenth century and hours for nightfall are now fixed annually by the Chief Rabbi.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Gregorian Calendar. Hejira years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the Hejira. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the Hejira year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a Hejira year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle, if the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1378 gives a quotient of 45 and a remainder of 28, and is thus common. A.H. 1379, with remainder 29, is a *kabishah* year. A.H. 1380 gives a quotient of 46 without remainder and is a common year.

Hejira Years 1378 and 1379

Name and Length of Month	A.H. 1378	A.H. 1379
Muharram (30)..	1958 July 18	1959 July 7
Saphar (29).....	Aug. 17	Aug. 6
Rabia I (30)	Sept. 15	Sept. 4
Rabia II (29)....	Oct. 15	Oct. 4
Jomada I (30)...	Nov. 13	Nov. 2
Jomada II (29)...	Dec. 13	Dec. 2
Rajab (30).....	1959 Jan. 11	Dec. 31
Shaaban (29)....	Feb. 10	1960 Jan. 30
Ramadân (30)...	Mar. 11	Feb. 28
Shawwâl (29)...	April 10	Mar. 29
Dulkaada (30)...	May 9	April 27
Dulheggia (29 or 30).....	June 8	May 27

NOTE.—A.H. 1380 (common year of 354 days) begins on 1960, June 26.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympaid which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1959 is, therefore, the year 2016 of the Vikrama Era.

The *Saka Era* of Southern India dating from March 3, A.D. 78, was declared the uniform national calendar of the Republic of India with effect from March 22, 1957, to be used concurrently with the Gregorian Calendar. As revised, the year of the new *Saka Era* begins at the spring equinox, with five successive months of 31 days and seven of 30 days in ordinary years; six months of each length in leap years. The year A.D. 1959 is 1881 of the revised *Saka Era*.

In the Hills, the *Saptarshi Era* dates from the

moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31
" Taishō " 1912 Aug. 1 to 1926 Dec. 25
" Shōwa " 1926 Dec. 26

Hence the year Shōwa 34 begins 1959 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiyōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day) Doyōbi (Earth-day).

TEMPERATURE AND RAINFALL RECORDS

GENERAL: The *maximum shade temperature* of the air on record is 136° F. at Azizia (Uzzizia) in Tripoli on Sept. 13, 1922; the *extreme lowest recorded temperature* is −90·4° F. (122° below freezing point) at Verkhoyansk, Siberia, on Feb. 5 & 7, 1892 and at Oymekon, Siberia, on Feb. 6, 1933. In the upper air temperatures as low as −133° F. have been recorded—*e.g.* over Agra (India), at a height of 16½ kilometres (54,000 feet).

The *wettest place* in the world is generally allowed to be the neighbourhood of Cherrapunji in Assam, where different stations have given averages of 424 and 459 inches per year, of which 90 per cent. fell in the six months April to September.

U.K.: The *maximum shade temperature* recorded in the air at 4 feet above the ground is 100° F. at Greenwich Observatory (Aug. 9, 1911).

The *lowest shade temperatures* are −17° F. at Braemar (Feb. 11, 1895) and −26° F. at Kelso (Dec. 3, 1879).

The *greatest rainfall* recorded in a day was at Martinstown, near Dorchester, 11·00 inches in the 24 hours commencing 9 a.m. (July 18, 1955). *Annual totals* exceeding 240 inches were recorded at The Stye, Borrowdale, in 1872, 1923, 1928 and 1954; at Ben Nevis Observatory in 1898 and at Llyn Llydaw, Snowdon, in 1909. The *smallest annual total* is 9·29 inches at Margate in 1921 and the largest may be regarded as 257 inches at Sprinkling Tarn in 1954.

The *maximum wind-velocity* on record occurred on the top of Costa Hill, Orkney, on December 12, 1956, in a gust of 127 miles per hour.

SUNSHINE RECORDS IN UNITED KINGDOM, 1957

Of the 320 stations reporting the number of hours of bright sunshine in the *Monthly Weather Reports* published by the Meteorological Office the following include the largest values in 1957, the recorded sunshine being given in hours:—Shanklin 1930, Jersey 1884, Sandown 1881, Littlehampton 1867, Weymouth 1861, Torquay 1846. The sunshine during 1957 was about 102a per cent. of average, the five months with less than average being March and July to October. The largest value in hours for stations in 1957 in Scotland was in the south-east at Dunbar, *viz.* 1533.

TEMPERATURE AND SUNSHINE AT VARIOUS PLACES IN GREAT BRITAIN

Mean Temperature of the air (° F.) and Bright Sunshine (as mean hours per day) at representative British Health Resorts and Towns during the year July, 1957, to June, 1958, and the calendar year 1957. Also height of Climatological Station above mean sea level, altitude being given in feet. Fuller details of the weather are given in the *Monthly Weather Report* published by the Meteorological Office.

Entries of Maximum Temperature cover day period 9–21 h.; Minimum Temperature night period 21–9 h. and are entered to day of reading: Rainfall the 24 hours commencing at 9 h. on day of entry: Sunshine the 24 hours 0·24 h.: Pressure and Wind are recorded at 9 h.: Wind is recorded in degrees, E.–90°, S.–180°, W.–270° and N.–360°. Pressure is corrected and reduced to M.S.L. Rainfall 1000 mm. = 39·37 in. Averages refer to the following standard periods:—Temperature, Pressure and Sunshine 1921–50; Rainfall, 1881–1915.

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The Equatorial *Circumference* is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901·8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365¼ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION.

The following estimate of the total population of the world by continents was included in a report by the U.N. Dept. of Economic and Social Affairs (*The Future Growth of World Population*) in 1958:—

Continent, etc.	Area in Square Miles	Estimated Population (June, 1955)
Europe*	2,085,000	409,000,000
Asia*	10,348,000	1,490,000,000
U.S.S.R.	8,337,000	197,000,000
Africa	11,699,000	216,000,000
North America	8,523,000	240,000,000
Latin America†	7,037,000	125,000,000
Oceania (including Australasia)	3,201,000	14,700,000
World	51,230,000	2,690,000,000

The report pointed out that the population of the world had increased since the beginning of the 20th Century at an unprecedented rate: In 1850 it was estimated at 1,094,000,000 and in 1900 at 1,550,000,000, an increase of 42 per cent. in 50 years. By 1925 it had risen to 1,907,000,000—23 per cent. in 25 years—and by 1950 it had reached 2,500,000,000, an increase of 31 per cent. in 25 years. Levels of population and the trend in distribution of the population by continents as forecast for the years 1975 and 2000 were:—

[millions]

Continent	1975		2000	
	Estimated Population	Per cent.	Estimated Population	Per cent.
Europe‡	751	19·6	947	15·1
Asia*	2,210	57·7	3,870	61·8
Africa	303	7·9	517	8·2
N. America.	240	6·3	312	5·0
Latin America†	303	7·9	592	9·4
Oceania	21	0·5	29	0·5
World	3,828	100	6,267	100

* Excluding U.S.S.R. † Mexico and the remainder of America south of U.S.A. ‡ Including U.S.S.R.

The British Dominions extend over the largest area (14,000,000 sq. miles); the U.S.S.R. is second (8,337,000 sq. miles); France (in 1939) was third, with 4,336,000 sq. miles. Other large areas are China, 4,135,000 sq. miles; the United States, with its insular jurisdiction, &c., 3,750,000 sq. miles; and Brazil 3,220,000 sq. miles.

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12′ N., to Cape Matapan, in the south of Greece, 36° 23′ N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30″ N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27′ 52″ E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1⅞ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1⅛ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

Area and Population of the World by Continents

The appended tables of area and population are based on such information as is immediately available. With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939–1945 is a readjustment of boundaries which have not yet been definitely settled.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

The *League of Nations Handbook*, which contained a large amount of statistical material, ceased to appear soon after the outbreak of the war of 1939–1945 and has been replaced by the *Monthly Bulletin of Statistics* prepared by the Statistical Office of the United Nations with the assistance of the statistical offices of the various governments and of specialized agencies. The Monthly Bulletin is published at the headquarters of the United Nations at Great Neck (Lake Success Branch), New York, U.S.A.

ASIA

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:—*Near East* (Turkey to Persia) 25°–60° E. long., *Middle East* (Baluchistan to Burma) 60 –100° E. long., *Far East* (Siam to Japan) 100°–160° E. long.

OCEAN AREAS AND DEPTHS

The greatest known Ocean Depth (in the Pacific, off the Philippines, 35,948 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Oceans

Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Pacific	63,986,000	Off Philippines, 35,948
Atlantic	31,530,000	Porto Rico Trench, 30,143
Indian	28,350,000	Sunda Trench, 22,968
Arctic	5,541,600	17,850

Seas

Name	Area of Basin (sq. miles)	Greatest Depth (feet)
Malay	3,137,000	Kei Trench, 21,343
Central American	1,770,170	Cayman, 23,000
Mediterranean	1,145,000	Matapan, 14,435
Behring	878,000	Buldir Trough, 13,422
Okhotsk	582,000	Kurile Trough, 11,154
East China	480,000	*about* 10,500
Hudson Bay	472,000	*about* 1,500
Japan	405,000	*about* 10,200
Andaman	305,000	*about* 11,000
North Sea	221,000	Skaggerak, 1,998
Red Sea	178,000	20° N., 7,254
Baltic	158,000	*about* 1,300

THE SEVEN WONDERS OF THE WORLD

I. The Pyramids of Egypt.—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 3,000 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 × 756 ft. at the base.

II. The Hanging Gardens of Babylon.—Adjoining Nebuchadnezzar's palace, 60 miles south of Bagdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.

III. The Tomb of Mausolus.—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.

IV. The Temple of Diana at Ephesus.—A marble temple designed by Ctesiphon and erected by cities of Ionia in honour of the goddess about 480 B.C.

V. The Colossus of Rhodes.—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.

VI. The Statue of Jupiter Olympus.—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.

VII. The Pharos of Alexandria.—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria.

THE LONGEST RIVERS

River.	Outflow	Length in Miles.
Nile	Mediterranean	4,160
Amazon	Atlantic	4,050
Missouri-Mississippi	Gulf of Mexico	3,760
Yangtse	North Pacific	3,400
Yenisei	Arctic Sea	3,300
Congo	Atlantic	3,000
Lena	Arctic Sea	2,800
Mekong	China Sea	2,800
Obi	Arctic Sea	2,700
Niger	Gulf of Guinea	2,600
Hoangho	North Pacific	2,600
Amur	"	2,500
Paraná	Atlantic	2,450
Volga	Caspian Sea	2,400
Mackenzie	Beaufort Sea	2,300
Yukon	Behring Sea	2,000
Arkansas	Mississippi	2,000
Madeira	Amazon	2,000
Colorado	Gulf of California	2,000
St. Lawrence	Gulf of St. Lawrence	1,800
Rio del Norte	Gulf of Mexico	1,800
Sao Francisco	Atlantic	1,800
Salween	Gulf of Martaban	1,800
Danube	Black Sea	1,725
Euphrates	Persian Gulf	1,700
Indus	Arabian Sea	1,700
Brahmaputra	Bay of Bengal	1,680
Murray	Indian Ocean	1,609
Severn	Bristol Channel	220
Thames	North Sea	210

THE LONGEST BRIDGES

(With length, in feet, of *waterway*.)

Lower Zambesi, Africa	11,322
Storsstromsbroen, Denmark	10,499
Tay Bridge, Scotland	10,289
Upper Sone, India	9,839
Godavari, India	8,881
Forth Bridge, Scotland	8,291
Rio Salado, Argentina	6,703
Golden Gate, San Francisco, U.S.A.	6,260
Rio Dulce, Argentina	5,865
Hardinge, India	5,384
Victoria Jubilee, Montreal	5,325
Moerdijk, Netherlands	4,698
Harbour, Sydney, N.S.W.	4,124
Jacques Cartier, Montreal	3,888
Queensborough, U.S.A.	3,720
Brooklyn, U.S.A.	3,451
Torun, Poland	3,291
Quebec Bridge, Quebec	3,205

PRINCIPAL HEIGHTS ABOVE SEA LEVEL

	Feet
Europe: Alps—Mont Blanc*	15,782
England: Scafell Pike	3,210
Wales: Snowdon	3,560
Scotland: Ben Nevis	4,406
Ireland: Carrantuohill	3,414
Asia: Everest	29,002
Africa: Kilimanjaro	19,340
North America: McKinley	20,300
South America: Aconcagua	22,976
Australia: Kosciusko	7,328
New Zealand: Cook	12,349
Oceania: Charles Louis	18,000

* The Caucasus being taken physically, if not politically, as in Asia.

PRESIDENTS OF THE FRENCH REPUBLIC

Committee of Public Defence	4 Sept. 1870
Louis Adolphe Thiers	31 Aug. 1871
Marshal MacMahon	24 May, 1873
Jules Grévy	30 Jan. 1879
Sadi Carnot (assass.: 24 June, 1894)	3 Dec. 1887
Jean Casimir Perier	27 June, 1894
François Félix Faure	17 Jan. 1895
Emile Loubet	18 Feb. 1899
Armand Fallières	18 Jan. 1906
Raymond Poincaré	17 Jan. 1913
Paul Deschanel	18 Feb. 1920
Alexandre Millerand	20 Sept. 1920
Gaston Doumergue	13 June, 1924
Paul Doumer (assass.: 7 May, 1932)	13 June, 1931
Albert Lebrun (deposed 1940)	10 May, 1932
Maréchal Pétain, "Vichy" nominee	11 July, 1940.

[After the liberation of Paris, General Charles de Gaulle entered the capital and formed a provisional government on Sept. 10, 1944. This was regarded as a continuation of the *Third Republic*. De Gaulle was named provisional President. He resigned and was succeeded by Félix Gouin on Jan. 23, 1946. A new National Assembly was elected and on June 2, 1946, Gouin resigned and was succeeded by Georges Bidault. On Oct. 13, 1946, a new Constitution was adopted and on Jan. 16, 1947 Vincent Auriol was elected by the National Assembly and the Council of the Republic.]

Vincent Auriol, *born* 1884	16 Jan. 1947
René Coty, *born* 1882	17 Jan. 1954

POPES FROM 1591

Sovereign Pontiff.	*Family Name.*	*Elected.*
Innocent IX	Facchinetti	1591
Clement VIII	Aldobrandini	1592
Leo XI	Medici	1605
Paul V	Borghese	1605

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth; it was conferred on Prince Charles by Her Majesty the Queen on July 26, 1958.

INDEPENDENT PRINCES, A.D. 844 to 1282	
Rhodri the Great	844–878
Anarawd, son of Rhodri	878–916

CHILDREN OF HER MAJESTY

H.R.H. THE PRINCE OF WALES (CHARLES Philip Arthur George), Prince of Wales and Earl of Chester, Duke of Cornwall and Duke of Rothesay, Earl of Carrick and Baron Renfrew, Lord of the Isles and Great Steward of Scotland, K.G., *born* at Buckingham Palace, November 14, 1948.

H.R.H. PRINCESS ANNE ELIZABETH ALICE LOUISE, *born* at Clarence House, August 15, 1950.

MOTHER OF HER MAJESTY.

H.M. QUEEN ELIZABETH THE QUEEN MOTHER (Elizabeth Angela Marguerite) (daughter of the 14th Earl of Strathmore and Kinghorne), Lady of the Garter, Lady of the Thistle, Order of the Crown of India, Grand Master of the Royal Victorian Order, Dame Grand Cross of the Order of the British Empire, Royal Victorian Chain, Doctor of Civil Law, Doctor of Literature, Colonel-in-Chief the Queen's Bays, 7th Queen's Own Hussars, 9th Queen's Royal Lancers, 3rd East Anglian Regiment (16th 44th Foot), Black Watch, K.O.Y.L.I., the Manchester Regiment, R.A.M.C., and the Royal Australian Army Medical Corps, Commandant-in-Chief W.R.A.C., Hon. Colonel London Scottish, Herts. Regt. (T.A.), City of London Yeomanry, Colonel-in-Chief Toronto Scottish and Black Watch (Royal Highland Regiment) of Canada. *Born* Aug. 4, 1900, *married* April 26, 1923, Prince Albert Frederick Arthur George of Windsor, Duke of York, who *succeeded* to the throne as KING GEORGE VI, Dec. 11, 1936, and *died* February 6, 1952.

Residences.—Clarence House, St. James's, S.W.1.; Castle of Mey, Caithness, Scotland.

SISTER OF HER MAJESTY

H.R.H. PRINCESS MARGARET ROSE, C.I., G.C.V.O., Colonel-in-Chief, the 3rd The King's Own Hussars, the Suffolk Regiment, the Highland Light Infantry, Queen Alexandra's Royal Army Nursing Corps, Women's Royal Australian Army Corps, Commandant-in-Chief, St. John Ambulance Brigade Cadets, Dame Grand Cross of the Order of St. John of Jerusalem, Commodore Sea Ranger Section of the Girl Guides Association; *born* at Glamis Castle, Angus, Scotland, Aug. 21, 1930.

ORDER OF SUCCESSION TO THE THRONE

The Queen's son and daughter are in the order of succession to the throne, and after the Princess Margaret, the Duke of Gloucester and his sons; then the Duke of Kent, his brother and his sister; then the Princess Royal, her elder son and his sons, and her younger son and his son; then Princess Arthur of Connaught; then Lord Carnegie, son of the late Countess of Southesk; then Prince Olav of Norway and his children; then the children of the second daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the children of the third daughter (the late Princess Alexandra of Hohenlohe-Langenburg); then the children of the eldest son of the late Princess Margaret of Connaught (Crown Princess of Sweden), her other sons and her daughter (Queen Ingrid of Denmark) and her children; then the younger daughter of the first Duke of Connaught and Strathearn (Lady Patricia Ramsay) and her son; then the Princess Alice (Countess of Athlone) and her daughter and grandchildren. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be profitless to pursue the investigation any further.

Precedence in England

The Sovereign.

The Prince Philip, Duke of Edinburgh

The Prince of Wales.

The Duke of Gloucester.

The Duke of Windsor.

Archbishop of Canterbury.

Lord High Chancellor.

Archbishop of York.

The Prime Minister.

Lord President of the Council.

Speaker of the House of Commons.

Lord Privy Seal.

High Commissioners of Commonwealth Countries and Ambassadors of Foreign States.

Dukes, according to their Patents of Creation:

(1) Of England; (2) of Scotland; (3) of Great Britain; (4) of Ireland; (5) those created since the Union.

Ministers and Envoys.

Eldest sons of Dukes of Blood Royal.

Marquesses, in same order as Dukes.

Dukes' eldest Sons.

Earls, in same order as Dukes.

Younger sons of Dukes of Blood Royal.

Marquesses' eldest Sons.

Dukes' younger Sons.

Viscounts, in same order as Dukes.

Earls' eldest Sons.

Marquesses' younger Sons.

Bishops of London, Durham and Winchester.

All other English Bishops, according to their seniority of Consecration.

Secretaries of State, if of the degree of a Baron.

Barons, in same order as Dukes.

Treasurer of H.M.'s Household.

Comptroller of H.M.'s Household.

Vice-Chamberlain of H.M.'s Household.

Secretaries of State under the degree of Baron.

Viscounts' eldest Sons.

Earls' younger Sons.

Barons' eldest Sons.

Knights of the Garter if Commoners.

Privy Councillors if of no higher rank.

Chancellor of the Exchequer.

Chancellor of the Duchy of Lancaster.

Lord Chief Justice of England.

Master of the Rolls.

President of the Probate Court.

The Lords Justices of Appeal.

Judges of the High Court.

Vice-Chancellor of County Palatine of Lancaster.

Viscounts' younger Sons.

Barons' younger Sons.

Sons of Life Peers.

Baronets of either Kingdom, according to date of Patents.

Younger Sons of the younger Sons of Peers.

Baronets' younger Sons.

Younger Sons of Knights in the same order as their Fathers.

Naval, Military, Air, and other Esquires by Office.

WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedency as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross and Dames Commanders, *see* pp. 298-299.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—*See* p. 683.

The Queen's Household

Lord Chamberlain, The Earl of Scarbrough, K.G., P.C., G.C.S.I., G.C.I.E., G.C.V.O., T.D.

George V.....	May 6, 1910	June 22, 1911
Edward VIII...	Jan. 20, 1936	..
George VI.....	Dec. 11, 1936	May 12, 1937
Elizabeth II	Feb. 6, 1952	June 2, 1953

THE QUEEN'S BIRTHDAY, 1959

The date for the observance of the Queen's Birthday in 1959, both at home and abroad, will be Saturday, June 13. For the Customs and Excise Department, and the officers and servants of the dock companies in England and Northern Ireland, the day appointed for the observance will be Saturday, June 27.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and the Statutes by which they are still governed were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet coatee with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Military Secretary, The War Office.

Governor, Maj.-Gen. Edmund Hakewill Smith, C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel R. Pennell, D.S.O.; Lt.-Colonel C. L. Hodgson; Major H. K. Clough, O.B.E.; Colonel A. H. W. Haywood, C.M.G., C.B.E., D.S.O.; Lt.-Colonel L. W. La T. Cockcraft, D.S.O., M.V.O.; Colonel J. A. Fraser, D.S.O., O.B.E., D.C.M.; Lt.-Colonel J. M. Mackenzie, D.S.O.; Lt.-Colonel L. Holbech, C.V.O., D.S.O., O.B.E., M.C.; Lt.-Colonel F. C. Hitchcock, O.B.E., M.C.; Lt.-Colonel R. F. Squibb, M.C.; Brigadier E. K. B. Furze, D.S.O., O.B.E., M.C.; Lt.-Colonel E. P. O. Boyle, M.V.O.

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000
Salaries of Household	185,000
Expenses of Household	121,800
Royal Bounty, alms and special services	13,200
Supplementary Provision	95,000
	£475,000

Queen Elizabeth the Queen Mother	£70,000
The Duke of Edinburgh	40,000
The Duke of Gloucester	35,000
The Princess Margaret	6,000
The Princess Royal	6,000

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE UNION JACK

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.
March 31 (1900).—Birthday of Duke of Gloucester.
April 21 (1926).—Birthday of Her Majesty the Queen.
April 25 (1897).—Birthday of the Princess Royal.
May 24.—Empire Day.
June 2 (1953).—Coronation Day.
June 10 (1921) Birthday of the Duke of Edinburgh.
June 13.—Queen's Official Birthday, 1959.
Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.
Aug. 15 (1950).—Birthday of the Princess Anne.
Aug. 21 (1930).—Birthday of the Princess Margaret.
Nov. 8—Remembrance Sunday, 1959.
Nov. 14 (1948).—Birthday of the Prince of Wales.
Nov. 20 (1947).—Her Majesty's Wedding Day.

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Works by Her Majesty's command and communicated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases where it has been the practice to fly the Union Jack daily, *e.g.* on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(*a*) Daily from the announcement of the death up to and including the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 11 a.m. to sunset.

(*b*) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(*c*) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(*d*) The funerals of Prime Ministers and ex-Prime Ministers of Great Britain.

(*e*) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown: (*a*) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (*b*) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days* at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1959

Jan. 25.	Conversion of St. Paul.

,, 9.	Lord Mayor's Day.
,, 14.	Birthday of the Prince of Wales.
,, 30.	St. Andrew.
Dec. 21.	St. Thomas.

THE PEERAGE AND ITS DEGREES

The rules which govern the arrangements of the Peerage are marked by so many complications that even an expert may occasionally be perplexed. All Peers of England are Peers of Parliament. In Scotland and Ireland there are Peerages of equally long standing and upon the successive Unions of those two Kingdoms with the Kingdom of England a certain number of Scottish and Irish Peers received titles in the Peerage of Great Britain, or of the United Kingdom, carrying the right of summons to the House of Lords.

All Peers of Parliament up to June 20, 1707, are classed as Peers of England and rank before all others of like degree; from that date to December 31, 1800, all fresh creations either in England or in Scotland were called Peers of Great Britain, and creations from January 1, 1801, onwards, either in Great Britain or Ireland, are known as Peers of the United Kingdom, save only that the Sovereign retains the power to create one new Peer of Ireland for every three Irish Peerages of older date than the Union which have become extinct. In 1868 the Barony of Rathdonnell was so created and in 1898 that of Curzon of Kedleston, the latter being designed to permit the holder (who was Viceroy of India from 1898 to 1905) to return to the House of Commons instead of entering the House of Lords.

From the date of the Union with Scotland 16 Scottish Peers, not entitled to sit in the House of Lords by virtue of a British or United Kingdom Peerage, are elected as Representative Peers for the duration of each Parliament; and from the date of the Union with Ireland 28 Irish Peers were so elected for life; the number of the latter is now reduced to 2, and the 26 vacancies are unlikely to be filled.

No Peer of England, Scotland, Great Britain or of the United Kingdom can be elected a Member of the House of Commons, but an Irish Peer who holds no title carrying the right to sit in the House of Lords can be so elected for any constituency out of Ireland itself, but while he sits as a Member of the Commons he loses his privileges as a Peer. Viscount Palmerston, so long M.P. for Tiverton, was an eminent example.

Fees for Dignities were payable as Inland Revenue until abolished by the Finance Act of 1937. They were in the form of revenue stamps, as follows: for a Dukedom £350; a Marquessate £300; an Earldom £250; a Viscountcy £200; a Barony £150; a Baronetcy £100.

PEERAGES CREATED SINCE THE LAST ISSUE

BARONS (5)—Birkett; Brecon; Harding of Petherton; Poole; Robins.

PEERAGES EXTINCT SINCE THE LAST ISSUE

VISCOUNTCIES (3)—Bracken (cr. 1952); Rhondda (cr. 1918); Ruffside (cr. 1951). BARONIES (5)—Bennett of Edgbaston (cr. 1953); Campion (cr. 1950); Egerton of Tatton (cr. 1859); Percy of Newcastle (cr. 1953); Webb-Johnson (cr. 1948).

PEERS WHO ARE MINORS

(As at Jan. 1, 1959)

THE PRINCE OF WALES (Duke of Cornwall) (*b.* 1948).
EARLS (4): Chichester (*b.* 1944); Gowrie (*b.* 1939); Kingston (*b.* 1943); Norbury (*b.* 1939).
VISCOUNTS (3): Gormanston (*b.* 1939); Gough (*b.* 1941); Ullswater (*b.* 1942).
BARONS (8): Davies (*b.* 1940); Fermoy (*b.* 1939); Hesketh (*b.* 1950); Lyell (*b.* 1939); Phillimore (*b.* 1939); Sudeley (*b.* 1939); Sysonby (*b.* 1945); Vestey (*b.* 1941).

The following Peer and Peeress will come of age during 1959:—
MARQUESS: Dufferin and Ava (July 9).
BARONESS: Darcy de Knayth (July 10).

SCOTTISH LORDS OF COURT OF SESSION

The word "Lord" prefixed to the names of Judges of the Court of Session, or to titles different from their names, is strictly an official honour and may be compared with the terms "Hon. Mr. Justice" and "Lord Chief Justice" in England, which replaced the titles "Baron" and "Lord Chief Baron." An Order in Council of February, 1905, authorized the retention of this Scottish honour for life, irrespective of retirement, and the style "Lady" is to be enjoyed by the wife and to continue in widowhood, though not after remarriage; but no distinction is conferred upon children. Lord in this case takes the prefix "Hon." in place of "Rt. Hon." of actual Lords, unless the Judges are also Privy Counsellors, in which case "Rt. Hon." is correct (*see* p. 253). There are 14 Lords of Session (*see* Index). The Chairman of the Scottish Land Court has the same rank and tenure as if he had been appointed a Judge of the Court of Session.

Peeresses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A Peeress in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peeress in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

Duchess in Her Own Right.

Created.	*Title, Order of Succession, Name, etc.*	*Eldest Son or Heir.*
1900	*Fife*, Alexandra (*H.R.H. Princess Arthur of Connaught*), *b.* 1891, *s.* 1912, *w.* (*see* p. 214).	Lord Carnegie, *b.* 1929.

LIFE PEERS

On July 24, 1958, the names of ten men and four women created life barons and baronesses under the Life Peerages Act, 1957, were announced. They were as follows: Sir Robert Boothby, K.B.E., M.P.; V. J. Collins, O.B.E., M.P.; Sir Ian Fraser, C.H., C.B.E., M.P.; Sir Charles Geddes, C.B.E.; V. F. Noel-Paton; E. A. A. Shackleton, O.B.E.; Sir John Stopford, K.B.E., F.R.S.; Dr. S. J. L. Taylor; Sir Edward Twining, G.C.M.G., M.B.E.; D. G. West, M.P.; Dame Katherine Elliot, D.B.E.; The Baroness Ravensdale; Stella, Marchioness of Reading, G.B.E.; and Mrs. Barbara Wootton (Mrs. Wright).

The Royal Warrant accompanying the announcement stated that wives and widows of law lords and life peers and sons and daughters of law lords and life peers and peeresses shall be treated for style, rank, dignity and precedence in the same way as wives, widows and children of hereditary barons.

At the time of going to press, the titles to be taken by the new life peers and peeresses were not known.

Courtesy Titles (*in actual use in* 1959)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles

From this list it will be seen that the "Marquess of Blandford" *is the heir to the* Dukedom of Marlborough *and the* "Earl of Aboyne" *to the* Marquessate of Huntly, *and* "Viscount Acheson" *heir to the* Earldom of Gosford; **the titles of second heirs are also given; e.g.* Viscount Savernake, *eldest son of the* "Earl of Cardigan" *heir to the* Marquessate of Ailesbury.

∴ *In addition to these Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled* "The Master of ——" *e.g.* "The Master of Falkland," *eldest son of* Viscount Falkland.

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—S. or l. appended to the date of creation denotes a *Scottish* or *Irish* title, the further addition of a * implies that the Peer in question holds also an *Imperial* title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the imperial creation. R. indicates that the Peer is a representative peer for Scotland or Ireland. The mark ' signifies that there is no " of " in the Marquessate or Earldom so designated; *b.* signifies born; *s.*, succeeded; *m.*, married; *w.*, widower or widow; *M.*, minor.

Her Majesty's Most Honourable Privy Council

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the chief advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, *e.g.*, the Judicial Committee, the Board of Trade, *q.v.* The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

Deputy Clerk of the Council, E. N. Landale.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable." The style of all other Peers, whether Privy Councillors or not, is "Right Honourable", although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Right (or Rt.) Hon. ——. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Right (or Rt.) Hon. the Lord (or Earl or Viscount) ——, P.C., or, less elaborately, The Lord (or Earl or Viscount) —— P.C.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 740, of whom 360 may belong to the Home Services, 180 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence).

THE ORDER OF MERIT (1902)—O.M. *Ribbon*, Blue and Crimson.

O.M.Mil.

This Order is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

O.M.Civ.

Professor George Macaulay Trevelyan, 1930.

Women.

Astor, Nancy, Viscountess, 1937.
Carruthers, Mrs. (Violet Markham), 1917.
Nicolson, Hon. Lady, 1948.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since the death of Queen Victoria. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

First Class.

Princess Wilhelmina of the Netherlands.

Second Class.

H.R.H. the Princess Alice, Countess of Athlone.

H.R.H. the Princess Alfonso d'Orleans-Bourbon.
Lady Victoria Patricia Helena Ramsay.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1948.

H.M. The Queen, 1947.
H.M. Queen Elizabeth the Queen Mother, 1931.
H.R.H. the Princess Margaret, 1947.
H.R.H. the Princess Royal, 1919.
H.R.H. the Duchess of Gloucester, 1937.
H.R.H. the Duchess of Kent, 1937.
H.H. Maharani Sahab Chimna Bai Gaekwar of Baroda, 1892.
Lady Victoria Patricia Helena Ramsay, 1911.
Margaret Etrenne Hannah, Marchioness of Crewe, 1911.
Marie Adelaide, Marchioness of Willingdon, 1917.
Dorothy Evelyn Augusta, Countess of Halifax, 1926.
Pamela, Countess of Lytton, 1927.
H.H. Maharani Regent of Travancore, 1929.
Doreen Maud, Marchioness of Linlithgow, 1936.
Doreen Geraldine, Dowager Baroness Brabourne, 1937.
Eugenie Marie, Countess Wavell, 1943.
Florence Amery, 1945.
H.H. Maharani Tara Devi of Jammu and Kashmir, 1946.
Edwina Cynthia Annette, Countess Mountbatten of Burma, 1947.
Agnes Anne, Baroness Clydesmuir, 1948.

Baronets, Knights Grand Cross, Knights Grand Commanders, Knights Commanders and Knights Bachelor

Badge of Baronets of England, Great Britain, U.K., (and Ireland marked I).

Badge of Baronets of Scotland or Nova Scotia (marked S.).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, *at the time of going to press*, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ( ).

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert *A*—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady *A*—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary *A*—"; if daughter of a Viscount or Baron "The Hon. Lady *A*—."

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir —— (first or Christian name) and in writing as "Sir A—— B——." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knight Principal*, Hon. Sir George Bellew, K.C.V.O., Garter King of Arms; *Hon. Registrar*, Major Sir Thomas Lumley-Smith, D.S.O.; *Clerk*, Miss E. Blackwell; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.2.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 15, 1958)

Peers are not included in this list

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Braithwaite (U.K. 1954); Ross (U.K. 1919).

Baronetcies Created—
Benyon; Bevan; Chapman; Dunnington-Jefferson; Nicholson of Winterbourne,; Platt; Welch.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, *e.g.* "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, *e.g.* "The Countess of ——, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

Richard Whittington.
A. T. Williams.
E. H. Windley.
Lieut.-Gen. E. W. Woodward.

K.C.V.O.

Capt. Sir Arthur Jarratt, R.N.V.R.
J. D. McLaggan.
Charles Wheeler, P.R.A.

K.B.E. (Military).

Vice-Adm. H. W. Biggs.
Air Marshal H. A. Constantine.
Lieut.-Gen. J. G. Cowley.
Maj.-Gen. L. E. Cutforth.
Maj.-Gen. W. G. Gentry.
Lieut.-Gen. R. W. Goodbody.
Surgeon Vice-Adm. R. C. May.
Rear-Adm. K. H. T. Peard.
Air Marshal P. B. Lee Potter.
Vice-Adm. B. I. Robertshaw.
Air Marshal F. R. W. Scherger.
Maj.-Gen. K. L. Stewart.

K.B.E. (Civil).

M. E. Adams.
R. J. Ayres.
Col. P. J. Blair.
Hon. S. C. Burbury.
C. R. Burns.
Col. R. J. Cash.
W. F. Crawford.
J. H. Evans.
Hon. P. B. Fletcher.
N. A. Gass.
Hon. K. M. Gresson.
I. L. Henderson.
E. T. Lambert.
A. D. Owen.
Maj.-Gen. W. R. C. Penney.
Sir Sydney Phillipson.
Hon. R. F. B. Philp.
Prof. F. H. Smirk.
Brig. G. H. Walton.
Maj.-Gen. G. F. Wootten.
Sir Newnham Worley.

D.B.E. (Military).

Air Commandant Mary Burnett.
Brigadier Monica Johnson.
Air Commandant Alice Williamson.

D.B.E. (Civil).

Mrs. Katharine Elliot.*
Miss M. L. K. Jones.
Miss Rose Macaulay.
Ivy, Duchess of Portland.
Miss Maggie Teyte.

KNIGHTS BACHELOR

T. H. W. Armstrong.
R. S. Bacon.
K. H. Bailey.
J. C. Baker.
S. J. Baker.
A. E. Baldwin, M.P.
A. T. Barnard.
Walter Barrie.
George Benson, M.P.
Lieut.-Col. R. L. Benson.
C. H. Bird.
W. R. Black.
Brig. J. S. K. Boyd.
Prof. J. R. M. Butler.
W. S. Carrington.
William Cash.
Maj.-Gen. W. J. Cawthorn.
Hon. H. J. Clayden.
W. R. J. Cook.
S. L. Courtauld.
C. G. A. Cowan.
H. K. Cowan.
William Crane.
Hon. C. R. Cudmore.
Col. A. G. Curphey.
E. J. Davies.
G. J. R. L. d'Erlanger.
J. B. Douglas.
J. C. Eccles.
W. A. Edmenson.
B. T. Edye.
C. A. Elliott.
J. W. Emberton.
D. L. Evans.
Prof. K. G. Feiling.
Brig. K. B. Fraser.
W. E. Hale.
W. H. Garrett.
S. J. Harley.
H. R. R. Grieve.
R. S. Harper.
Maj. E. S. Harston.
F. C. Hawker.
J. W. F. Hill.
F. A. Hoare.
M. J. P. Hogan.
F. C. How.
J. S. Huxley.
C. K. Ingold.
Willis Jackson.
O. T. Jenkins.
O. Jibowu.
Y. A. K. Jivanjee.
K. I. Julian.
R. B. Keefe.
Prof. H. A. Krebs.
T. G. Lund.
Hon. W. J. F. McDonald.
Audley McKisack.
Ernest Marsden.
W. H. S. Michelmore.
Col. J. MacB. Miller.
Col. J. D. Mills.
A. G. R. Mooring.
Hon. J. M. Murray.
Kenneth Murray.
Col. F. A. Neill.
E. J. Norman.
A. H. K. W. Northey.
Hon. Norman O'Bryan.
G. E. N. Oehlers.
A. R. Park.
Fred Parkes.
Prof. T. H. Parry-Williams.
J. S. Pickles.
W. B. Purchase.
R. D. Rae.
R. O. Ramage.
H. W. L. Reddish.
A. J. Reid.
E. W. Riches.
G. W. K. Roberts.
S. C. Roberts.
F. G. Robinson.
J. E. Robinson.
N. de W. Robinson.
Very Rev. F. W. Rolland.
Steven Runciman.
J. W. Russell.
W. C. Russon.
J. W. Seuter.
C. A. P. Southwell.
Ernest Stacey.
J. N. Summerson.
R. W. Taylor.
H. G. Thornley.
C. N. Thornton-Kemsley, M.P.
W. G. D. Upjohn.
A. S. Ward.
Ralph Whishaw.
D. T. Williams.
J. F. Williams.
Gerald Wills, M.P.
W. J. Worboys.
I. D. Yeaman.

* Since created a life baroness

THE VICTORIA CROSS, *VC*

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th*, 1856.

The *VC* is worn before all other decorations, on the left breast, and consists of a cross-pattee of bronze, 1⅜ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." In all three fighting Services holders of the *VC* below commissioned rank (or below warrant rank in the Royal Navy) receive an annuity of £10 a year concurrently with the award, plus an addition of 6*d.* a day (£9 2*s.* 0*d.* a year) to the recipient's pension. In the case of a posthumous award, £50 is credited to the estate of a recipient, or the balance of £50 if that amount has not been paid during his lifetime; an additional annuity of £5 is paid for each bar, such bar being added for additional acts of bravery which would have entitled the recipient to the Victoria Cross if he or she had not already received it. In the event of an annuitant being unable to obtain a livelihood on leaving the Service, the amount of the annuity may be increased to £75. All payments are free of tax. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

Surviving Recipients of the Victoria Cross

Addison, Rev. W. R. F. (C.F.), *Gt. War*... 1916

THE GEORGE CROSS, GC

The ribbon is *dark blue* threaded through a bar adorned with laurel leaves

FOR GALLANTRY

INSTITUTED *September 24th*, 1940 (with amendments, *November 3rd*, 1942).

The GC is worn before all other decorations (except the VC) on the left breast § and consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription " For Gallantry " appears round the medallion and in the angle of each limb of the cross is the Royal cypher " G VI " forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon 1½ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

Empire Gallantry Medal.—The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the Empire Gallantry Medal made after the outbreak of war in 1939. In the list below, the date of award of the Empire Gallantry Medal and of its exchange for the George Cross is noted.

SURVIVING RECIPIENTS OF THE GEORGE CROSS

THE ISLAND OF MALTA, 1942

2nd Lt. M. P. Benner (R.E.).

THE GRAND PRIORY IN THE BRITISH REALM OF THE MOST VENERABLE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM

(INCORPORATED MAY 14, 1888, WITH ADDENDA 1888, 1890, 1907, 1926 and 1955), St. John's Gate, Clerkenwell, E.C.1.

Sovereign Head .....H.M. the Queen.
Grand Prior.....H.R.H. The Duke of Gloucester, K.G., P.C., K.T., K.P., G.M.B., G.C.M.G., G.C.V.O.
Lord Prior.....The Lord Wakehurst, K.C.M.G.

The Order had its origin in Jerusalem and Acre as an international lay confraternity for the relief of crusaders, and was later sovereign in Rhodes and in Malta, where its Knights kept galleys and galleons, to attack the Barbary Corsairs and to prevent the spread of Turkish rule in the Mediterranean, from 1530 till 1798. Like other ancient Orders of Chivalry, the Order of St. John had also Priories and Commanderies in the different countries of Europe, those in England and Scotland being dissolved at the same time as the monasteries. The Order was expelled from Malta by Napoleon in 1798, after which the Grand Magistrature eventually settled in Rome, with various Priories and associations elsewhere in Europe.

In 1827 the Knights of France, with the authority of the Grand Magistrature, assisted in the reconstruction of what is now the Grand Priory in the British Realm of the Most Venerable Order of the Hospital of St. John of Jerusalem, whose Chancery is at the Gatehouse which still remains in Clerkenwell as part of the ancient Priory of England. A Royal Charter was granted to this British Order in 1888 by Queen Victoria, and the first Grand Prior was King Edward VII, while Prince of Wales. The Badge is a Maltese Cross of white enamel, with a lion and unicorn in alternate angles, of gold or silver according to grade, with a black watered ribbon; a medal is conferred for acts of gallantry involving risk of life. By a Royal Charter of March 15, 1955, members are divided into six grades:—(1) Bailiffs and Dames Grand Cross; (2) Knights and Dames of Justice and of Grace; (3) Commanders; (4) Officers; (5) Serving Brothers and Sisters; and (6) Esquires. The Chaplains of the Order form a special class, taking precedence between the Knights and Commanders. A notification of these distinctions having been conferred appears in the London Gazette, but they do not confer any rank, style, title or precedence.

The work of the Order consists of the maintenance of its three Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882); The St. John Ambulance Association, which is responsible for the education of the public in First Aid and kindred subjects; and the St. John Ambulance Brigade.

Prelate—His Grace the Archbishop of Canterbury.
Chancellor—Lieut.-Gen. Sir Henry Pownall, K.C.B., K.B.E., D.S.O., M.C.
Secretary-General—Charles Tunstall Evans, C.M.G.
Director-General of the St. John Ambulance Association, Horace F. Parshall, T.D.
Receiver-General—L. G. Whyte.
Hospitaller—Brig. Sir Stewart Duke-Elder, G.C.V.O., M.D.
Almoner—Sir Gerald Creasy, K.C.M.G., K.C.V.O., O.B.E.
Genealogist—The Hon. Sir George Bellew, K.C.V.O.
Director of Ceremonies—Maj. A. Urquhart, D.S.O.
Commissioner-in-Chief, St. John Ambulance Brigade—Maj.-Gen. J. M. Kirkman, C.B., C.B.E.
Librarian—Major Richard Williams, F.S.A.
Registrar—Sir Harry Luke, K.C.M.G., D.Litt.

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision is made for 17 Ministers of the first rank (Cabinet Ministers) of whom not more than 15 may be members of the House of Commons, and for 23 *Parliamentary Secretaries* of whom not more than 21 may be members of the House of Commons and not fewer than 2 of the Lords.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906. In 1957 the salary was increased to £3,000.

THE PRINCIPAL PARTIES IN PARLIAMENT

(1900–1955)

General Election	Conservative and Unionist	Liberal	Labour
1900	402	185	11
1906	152	387	41
1910 (Jan.)	273	275	40
1910 (Dec.)	272	272	42
1918	382 (*a*)	161 (*b*)	74 (*c*)
1922	347	118 (*d*)	142
1923	258	151	191
1924	414	39	150
1929	260	59	287
1931	471	72 (*e*)	65 (*f*)
1935	387	54 (*g*)	166 (*h*)
1945	189	25 (*i*)	396 (*j*)
1950	298 (*k*)	9	315 (*l*)
1951	320 (*m*)	6	296 (*l*)
1955	344 (*m*)	6	277 (*n*) (*o*)

NOTES.—(*a*) including 48 Non-Coalition Unionists. (*b*) including 28 Non-Coalition Liberals. (*c*) including 63 Non-Coalition Labour. (*d*) Liberal National 59; Liberal 59. (*e*) Liberal National 35 (Simon); Liberal 33 (Samuel); 4 (Lloyd George). (*f*) National Labour 13 (MacDonald); Labour 52 (Henderson). (*g*) Liberal National 33; Liberal 21. (*h*) National Labour 8; Labour 154; I.L.P. 4. (*i*) Liberal National 13. Liberal 12. (*j*) Labour 393; I.L.P. 3. (*k*) Incl. Nat. Liberal. (*l*) Irish Nationalists (2) and Speaker make total of 625. (*m*) Including associates. (*n*) Sinn Fein (2) and Speaker make total of 630. (*o*) In by-elections since 1955, the Labour Party has gained four seats and the Conservative Party lost four. The 2 Sinn Fein members have since been disqualified, and there are now 342 Conservative and associate members.

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—*see* "Committees," pp. 316–7). Bills of major importance are usually, and Money Bills are always, sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Councillors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Councillors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance, during the Queen's Commonwealth tour in 1953–54, the Councillors of State were Queen Elizabeth the Queen Mother, Princess Margaret, the Duke of Gloucester, the Princess Royal, and the Earl of Harewood.

In the event of the Sovereign on accession being under the age of eighteen years or at any time unavailable or incapacitated by infirmity of mind or body for the performance of the royal functions, provision is made for a Regency. The Regency Act, 1953, has designated the Duke of Edinburgh as Regent, should a Regency become necessary during the minority of the children of her present Majesty.

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679–80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and Tory to *Conservative*.

The Oxford English Dictionary explains the terms as follows:—

Whig [origin obscure; probably shortening of *Whiggamore*].—An adherent of the Presbyterian cause in Scotland in the seventeenth century. Applied to the Exclusioners who opposed the succession of James, Duke of York, to the crown, on the ground of his being a Roman Catholic.

Tory [Anglicized spelling of Irish *toraidhe* "pursuer"] . . . applied to any Irish Papist or Royalist in arms. A nickname given 1679–80 by the Exclusionists to those who opposed the exclusion of James, Duke of York (a Roman Catholic), from the succession to the crown.

Before the reign of William and Mary (1688–1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of *personnel* or resignation of the whole body of Ministers.

The *Act of Settlement* (1701) secured the Protestant succession to the throne and with the accession of George I (1714) the main cause of the political division was removed, leaving the Whigs as the dominant party for many years, the Tories being regarded as Jacobites in permanent opposition to the Hanoverians; but before the close of George II's reign (1760) they had become reconciled to the dynasty and during the French wars they secured an ascendency in Parliament.

The accession of a King unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days, a period which has been surpassed only by the Rt. Hon. W. L. Mackenzie King, Prime Minister of the Dominion of Canada, 1921–30 and from 1935 to 1948.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951 and 1955 Elections.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour Candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." Of this number John Burns (Battersea) and J. Keir Hardie (West Ham) were elected "Labour" Members of Parliament and 13 others as "Liberal-Labour" members. At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

On Feb. 27, 1900, as a result of a resolution passed by the Trades Union Congress in the previous September, a Conference of Trade Union and Socialist bodies was held in the Memorial Hall, Farringdon Street, London, and an organization called the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a five-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,750; the Captain of the

Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant do.*) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £2,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £2,000.

The House of Lords

The *Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Earl St. Aldwyn), the Captain of the Queen's Bodyguard and the Yeomen of the Guard (The Earl of Onslow) and the (Political) Lords in Waiting (The Marquess of Lansdowne, Earl Bathurst and Lord Chesham).

The *Labour Whips* are: The Earl of Lucan (*Chief Whip*); The Lords Burden, Kershaw and Haden-Guest.

The *Liberal Whip* is The Lord Amulree.

The House of Commons

The *Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* (who are unpaid) are also usually appointed.

The *Labour Whips* are: H. W. Bowden (*Chief Whip*); E. Popplewell; A. Pearson; H. E. Holmes; W. A. Wilkins; A. C. Allen; G. E. C. Wigg; J. T. Price; G. H. R. Rogers.

The *Liberal National Whip* is Sir Herbert Walter Butcher.

The *Liberal Whip* is D. W. Wade.

SCOTTISH REPRESENTATIVE PEERS
(Elected at the Palace of Holyroodhouse, May, 1955).

Sixteen Representative Peers are elected for each Parliament by the entire adult Peerage of Scotland specially convened for that purpose.

Earl of Rothes.	Lord Forbes.
Earl of Caithness.	Lord Saltoun.
Earl of Perth.	Lord Sempill.
Earl of Haddington.	Lord Balfour of Burleigh.
Earl of Lindsay.	Lord Fairfax of Cameron.
Earl of Airlie.	Lord Reay.
Earl of Selkirk.	Lord Polwarth.
Earl of Breadalbane and Holland.	

IRISH REPRESENTATIVE PEERS

No further elections have been held since the establishment of the Irish Free State in 1920.

Peer	*Date of Election*
Earl of Kilmorey	Feb. 14, 1919

(And 27 vacancies.)

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

Works, H. Nicholls, M.P.

Leader of the Opposition, The Rt. Hon. Hugh Todd Naylor Gaitskell, C.B.E., M.P., *born* April 9, 1906.

THE HOUSES OF PARLIAMENT

Parliament originated in the demand of the King's Great Council, consisting of prelates, earls and barons, that there should be discussion about the affairs of state, and in 1242 the word "parliament" was first used in an official document to describe such an assembly. In 1265 Simon de Montfort in the king's name summoned to a parliament not only the great men but also for the first time two representatives elected by each county, city and town, and by the end of the reign of Edward I it had become usual to summon the Commons.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. The Finance Bill, which imposes taxation, and Consolidated Fund Bills, which authorise expenditure, must begin in the Commons and may not be amended by the Lords in any respect whatever. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regards to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1948—(*a*) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (*b*) any other public bill (except one to extend the life of a Parliament), which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914–18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Parliament is dissolved (as it is summoned) by the Sovereign, and until the passing of the Representation of the People Act (1867), Parliament was dissolved by the Demise of the Crown, but in that Act provision was made for its continuance to the normal duration, unless previously dissolved.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 11 hrs. 57 minutes (from 4.15 p.m. to 4.12 a.m. Nov. 1934).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803–1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid but are entitled to a daily expense allowance of up to £3 3s. and to travelling expenses from their homes to the House.

Since 1911 members of the House of Commons have received salaries and travelling facilities over the railways, the payment of £400 being increased in 1937 to £600, and in 1946 to £1,000 per annum. In 1953 a sessional expense allowance of £2 for each Parliamentary day, excluding Fridays, was introduced. In 1957 this was superseded by a tax free annual expense allowance of £750. Members of Parliament contribute at the rate of £18 per annum towards a Fund to provide pensions or grants to ex-members, their widows and orphans whose incomes are below certain limits; income from investments in 1956–57 was £3,051 and expenditure in grants £12,135. The Capital Account (1957) stood at £89,639. An Act was passed in 1957 enabling the Treasury to make an annual contribution to the fund. £5,000 was so contributed in 1956–57.

THE HOUSE OF LORDS

The House of Lords consists of some 870 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior Bishops from the remaining English sees. The Lords Temporal are: Peers by descent of England, Great Britain or the United Kingdom, peers of new creation, Lords of Appeal in Ordinary (who are life peers), one Irish Representative Peer (elected before 1921 for life), Scottish Representative Peers (16 elected for duration of Parliament) and life Peers and Life Peeresses created under the Life Peerages Act, 1958. An Irish Peer not in the House of Lords is eligible for election as a member of the House of Commons for an English, Welsh or Scottish constituency.

THE HOUSE OF COMMONS

By the *Representation of the People Act* (1885) membership was increased from 658 (at which it had stood since 1801 through the *Act of Union with Ireland*) to 670, and by a similar Act (1918) it was increased to 707. By the *Government of Ireland Act* (1920) and the *Irish Free State Agreement Act* (1922) membership was decreased to 615, Irish representation being reduced from 105 to 13 members. By the *Representation of the People Act* of 1945 25 new constituencies were created, making the total 640; and by a similar Act of 1948 the total membership was reduced to 625. As the result of Orders in Council made in 1955 under the *House of Commons (Redistribution of Seats) Act*, 1949, the total membership has now been increased to 630.

THE PALACE OF WESTMINSTER

An ordnance issued in the reign of Richard II stated that "Parliament shall be holden or kepid wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's Chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 330 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flagstaff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 13½-ton Hour Bell named after Sir Benjamin Hall, First Commissioner of Works when the original bell was cast in 1856 The dials of the clock are 22½ feet in diameter the hands being 11 feet (hour) and 14 feet (minute) in length. The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The Lord High Chancellor of England is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the Woolsack and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister, No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the Chequers estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
Earl of Wilmington, *Whig*, Feb. 16, 1742.
Henry Pelham, *Whig*, Aug. 25, 1743.
Duke of Newcastle, *Whig*, May 18, 1754.
Duke of Devonshire, *Whig*, Nov. 16, 1756.
Duke of Newcastle, *Whig*, July 2, 1757.
Earl of Bute, *Tory*, May 28, 1762.
George Grenville, *Whig*, April 15, 1763.
Marquess of Rockingham, *Whig*, July 10, 1765.
Earl of Chatham, *Whig*, Aug. 2, 1766.
Duke of Grafton, *Whig*, Dec. 1767.
Lord North, *Tory*, Feb. 6, 1770.
Marquess of Rockingham, *Whig*, March 27, 1782.
Earl of Shelburne, *Whig*, July 13, 1782.
Duke of Portland, *Coalition*, April 4, 1783.
William Pitt, *Tory*, Dec. 7, 1783.
Henry Addington, *Tory*, March 21, 1801.
William Pitt, *Tory*, May 16, 1804.
Lord Grenville, *Whig*, Feb. 10, 1806.
Duke of Portland, *Tory*, March 31, 1807.
Spencer Perceval, *Tory*, Dec. 6, 1809.
Earl of Liverpool, *Tory*, June 16, 1812.
George Canning, *Tory*, April 30, 1827.
Viscount Goderich, *Tory*, Sept. 8, 1827.
Duke of Wellington, *Tory*, Jan. 26, 1828.
Earl Grey, *Whig*, Nov. 24, 1830.
Viscount Melbourne, *Whig*, July 13, 1834.
Sir Robert Peel, *Tory*, Dec. 26, 1834.
Viscount Melbourne, *Whig*, March 14, 1835.
Sir Robert Peel, *Tory*, Sept. 6, 1841.
Lord John Russell, *Whig*, July 6, 1846.
Earl of Derby, *Tory*, Feb. 28, 1852.
Earl of Aberdeen, *Peelite*, Dec. 28, 1852.
Viscount Palmerston, *Liberal*, Feb. 10, 1855.
Earl of Derby, *Conservative*, Feb. 25, 1853.
Viscount Palmerston, *Liberal*, June 18, 1858.
Earl Russell, *Liberal*, Nov. 6, 1865.
Earl of Derby, *Conservative*, July 6, 1866.
Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
W. E. Gladstone, *Liberal*, Dec. 9, 1868.
Benjamin Disraeli, *Conservative*, Feb. 21, 1874.
W. E. Gladstone, *Liberal*, April 28, 1880.
Marquess of Salisbury, *Conservative*, June 24, 1885.
W. E. Gladstone, *Liberal*, Feb. 6, 1886.
Marquess of Salisbury, *Conservative*, Aug. 3, 1886.
W. E. Gladstone, *Liberal*, Aug. 18, 1892.
Earl of Rosebery, *Liberal*, March 3, 1894.
Marquess of Salisbury, *Conservative*, July 2, 1895.
A. J. Balfour, *Conservative*, July 12, 1902.
Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
H. H. Asquith, *Liberal*, April 8, 1908.
H. H. Asquith, *Coalition*, May 26, 1915.
D. Lloyd George, *Coalition*, Dec. 7, 1916.
A. Bonar Law, *Conservative*, Oct. 23, 1922.
S. Baldwin, *Conservative*, May 22, 1923.
J. R. MacDonald, *Labour*, Jan. 22, 1924.
S. Baldwin, *Conservative*, Nov. 4, 1924.
J. R. MacDonald, *Labour*, June 8, 1929.
J. R. MacDonald, *Coalition*, Aug. 25, 1931.
S. Baldwin, *Coalition*, June 7, 1935.
N. Chamberlain, *Coalition*, May 28, 1937.
W. S. Churchill, *Coalition*, May 11, 1940.
W. S. Churchill, *Conservative*, May, 23, 1945.
C. R. Attlee, *Labour*, July 26, 1945.
Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.
Sir A. Eden, *Conservative*, April 6, 1955.
H. Macmillan, *Conservative*, Jan. 13, 1957.

Of the 43 Prime Ministers 18 sat in the House of Lords and 24 in the House of Commons during their term of office. One, Lord John Russell (afterwards Earl Russell) sat in his first Ministry in the House of Commons, and in his second in the House of Lords. Benjamin Disraeli was raised to the peerage as Earl of Beaconsfield during his second term of office.

Lord Palmerston, as an Irish peer, and Lord North, as the holder of a courtesy title, both sat in the House of Commons.

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the *Chiltern Hundreds*, or Steward of the *Manor of Northstead*, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the Chiltern Hundreds and the Manor of Northstead as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. *Strangers* are present during the debates of both Houses on sufferance, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within two minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (*see* p. 314).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, *e.g.* ineligibility to sit owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered.*" He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the *Clerk of the House of Commons*, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the *Clerk of the Parliaments*. Members of the House may put an unlimited number of questions to Ministers, but forty-eight hours' notice must be given, and not more than three demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the

House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing *exclusively* with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 20, 1882. A motion may be made *that the question be now put*. If the Speaker decides that the rights of a minority are not being prejudiced and 100 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the Closure. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, *e.g.* "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The *Speaker of the House of Commons* is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a member is to *Name* him. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes. A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

SPEAKERS OF THE COMMONS SINCE 1660

Parliament of England.

1660. Sir H. Grimston.
1661. Sir E. Turner.
1673. Sir J. Charlton.
1673. Edwd. Seymour.
1678. Sir Robt. Sawyer.
1679. Serjeant William Gregory
1680. W. Williams.
1685. Sir John Trevor.
1688. H. Powle.
1694. Paul Foley.
1698. Sir T. Lyttleton.
1700. Robert Harley (*Earl of Oxford and Mortimer*).
1702. John Smith.

Parliament of Great Britain.

1708. Sir Richard Onslow (*Lord Onslow*).
1710. Wm. Bromley.
1713. Sir Th. Hanmer.
1715. Spencer Compton (*Earl of Wilmington*).
1727. Arthur Onslow.
1761. Sir John Cust.
1770. Sir F. Norton.
1780. C. W. Cornwall.
1788. Hon. W. Grenville (*Lord Grenville*).
1789. Henry Addington (*Viscount Sidmouth*).

Parliament of United Kingdom.

1801. Sir John Mitford (*Lord Redesdale*)
1802. Charles Abbot (*Lord Colchester*).
1817. Charles M. Sutton (*Viscount Canterbury*).
1835. James Abercromby (*Lord Dunfermline*).
1839. Charles Shaw-Lefevre (*Viscount Eversley*).
1857. J. Evelyn Denison (*Viscount Ossington*).
1872. Sir H. W. B. Brand (*Viscount Hampden*).
1884. Arthur Wellesley Peel (*Viscount Peel*).
1895. William Court Gully (*Viscount Selby*).
1905. James W. Lowther (*Viscount Ullswater*).
1921. John Henry Whitley.
1928. Hon. Edward Algernon FitzRoy.
1943. Col. D. Clifton Brown (*Viscount Ruffside*).
1951. William Shepherd Morrison.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a *Speaker's Conference* of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the *Parliament (Qualification of Women) Act* containing the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1918. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. Twenty-four women were elected at the 1955 Election (14 Labour, 9 Conservative and 1 Ulster Unionist), 3 more than at the Dissolution. Four women have been elected at subsequent by-elections (2 Conservative and 2 Labour).

FORFEITED DEPOSITS

Candidates at parliamentary elections who fail to obtain more than one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge. This law has been in force since the 1918 election.

One hundred deposits were forfeited at the 1955 Election, 3 more than in 1951. Deposits were lost by 60 Liberal candidates, 15 Communists, 7 Welsh Nationalists, 5 Sinn Fein, 5 Independents, 3 Conservatives, 3 Independent Labour, 1 Labour and 1 Scottish Nationalist. Fifteen out of 17 Communist candidates forfeited their deposits. In 1950 the record number of 443 deposits was lost.

THE INTER-PARLIAMENTARY UNION

6 Rue Constantin, Geneva, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. In 1945, the Union resumed work on all questions connected with peace and reconstruction, which have been studied under various aspects. Some of them are as follows:—

The development of international law; economic development; national sovereignty; principles of international morality; social problems; immigration and emigration; intellectual relations.

In addition to member groups in national Parliaments, the Union works largely through standing study committees, which meet each Spring, and annual plenary conferences, which meet in the late summer.

British Group.

Hon. Presidents, The Lord Chancellor; Mr. Speaker.
President, The Rt. Hon. Harold Macmillan, M.P.
Vice-Presidents, The Viscount Stansgate, D.S.O., D.F.C.; The Marquess of Salisbury, K.G.; The Earl of Scarbrough, K.G.; The Rt. Hon. J. S. B. Lloyd, C.B.E., T.D., Q.C., M.P.; The Rt. Hon. H. T. N. Gaitskell, C.B.E., M.P.
Chairman, Col. Sir Malcolm Stoddart-Scott, O.B.E., T.D., M.D., M.P.
Secretary, Maj-Gen. W. A. Dimoline, C.B., C.M.G., C.B.E., D.S.O., M.C.

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" at the Coronation of His late Majesty King George V, in 1911, between representatives of the Dominion Parliaments and Members of the Lords and Commons, for the purpose of exchanging information and visits between Members of Parliament of the Commonwealth. The Association has branches in the Parliaments of the United Kingdom, Canada, Australia, New Zealand, the Union of South Africa, India, Pakistan, Ceylon, Federation of Rhodesia and Nyasaland, Ghana, Federation of Malaya, Malta and Nigeria, in the State Parliaments of Australia, the Provincial Parliaments of Canada, the State Legislatures of India and Pakistan, the Territorial Parliaments of Southern Rhodesia and Northern Rhodesia, the Regional Legislatures of Nigeria and the Cameroons, the Parliaments of Northern Ireland, the Isle of Man and Jersey, the Legislatures of Bermuda, Bahamas, Jamaica, Barbados, Trinidad and Tobago, the Windward Islands, the Leeward Islands, British Honduras, British Guiana, Singapore, Kenya, Uganda, Mauritius, Sierra Leone and Gambia, making a total of 67 branches. The name of the Association was changed to its present form in 1948. Commonwealth Parliamentary Conferences and General Meetings are held in alternate years and meetings of the General Council every year, in different countries of the Commonwealth. There are associated groups in the Congress of the United States and the Parliament of the Republic of Ireland.

Chairman of the General Council, M. A. Ayyangar (India).
Secretary-General and Editor of Publications, Sir Howard d'Egville, K.B.E., LL.D., Houses of Parliament, S.W.1.
Secretary, United Kingdom Branch, Major J. G. Lockhart, C.B.E., Westminster Hall, Houses of Parliament, S.W.1.

REDISTRIBUTION OF CONSTITUENCIES

The Constituencies underwent considerable redistribution before the 1955 General Election as a result of the first general review by the Boundary Commissions under the *House of Commons (Redistribution of Seats) Act*, 1949. The number of constituencies was increased from 625 to 630. Eleven new divisions were created in England, and six abolished. In addition there were major alterations to 152 constituencies and minor redistribution in 30 constituencies in England, substantial changes in 20 divisions and minor ones in 7 divisions in Scotland, and minor alterations in 6 Welsh constituencies. There were no changes in Northern Ireland. The boundary commissions are permanent bodies and are entrusted with the task of maintaining a review of the present constituencies, and recommending any further changes which may become necessary.

VOTES CAST AT THE GENERAL ELECTIONS, 1945, 1950, 1951 AND 1955 AND AT BY-ELECTIONS SINCE 1945

General Election, 1945

Labour	11,985,733
Conservative	8,693,858
Liberal	2,253,197
Liberal National	759,884
Ulster Unionist	441,109
Independent	287,345
Irish Nationalist	148,078
National	125,299
Communist	102,780
Common Wealth	96,247
Independent Conservative	40,948
Independent Labour Party	36,153
Scottish Nationalist	30,594
Welsh Nationalist	14,887
Democratic	1,809
Independent Socialist	472
Total	25,018,393

THE HOUSE OF COMMONS BY CONSTITUENCIES

The figures following the name of the Constituency denote the total number of *Electors* in the Parliamentary Division at the General Election of 1955.

ABBREVIATIONS.—*A.-P.* = Anti-Partition; C. = Conservative; *Comm.* = Communist; *I.L.P.* = Independent Labour Party; *Ind.* = Independent; *L.* = Liberal; *Lab.* = Labour; *Nat. L.* = National Liberal; *Scott. Nat.* = Scottish Nationalist; *S.F.* = Sinn Fein; *U.U.* = Ulster Unionist; *Welsh Nat.* = Welsh Nationalist. An asterisk * denotes membership of the last House for the same division; an obelisk †, for a different division.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1957–58

CLOSING THE SESSION.—Both Houses of Parliament reassembled after the summer recess on *Oct.* 29, and the old Session was brought to an end four days later, after two important announcements had been made. On the first day, Mr. Thorneycroft, the Chancellor of the Exchequer, said that as a result of the measures taken by the Government to deal with inflation speculative losses had ceased in the past six weeks, and we had been gaining reserves almost daily. The value of the pound was being held at $2·80 and the intention of the Government was to keep it there. Of the new measures to deal with the problems of inflation at home, the first was to limit the investment of all public authorities and instructions had been given to the Government departments, local authorities and the nationalized industries to make the required adjustments to hold their investments at the level of 1957–58, approximately £1,500,000,000 each year. No alteration would be made in the roads programme, and in education the main schools programme would continue unchanged, but some reduction in housing was inevitable. The banks would place a limit on the amount of money provided in the private sector, and the Capital Issues Committee would intensify its critical attitude to applications to borrow. These measures were designed to make money scarcer and more expensive. The Government were not taking over the control of wages or profit levels. But if wage increases on the scale on which they had been given were granted it would be a disaster to the country, to the employers and to the men. He said their measures would not lead to unemployment, provided moderation was exercised all round, but without these measures there would be massive unemployment within a matter of months. For the Opposition, Mr. Harold Wilson said the Government should propose an economic conference with the Commonwealth and our Allies, and declared that the country's difficulties could not be solved by open conflict or even cold war between the Government and organized labour. The debate was concluded on the following day when the Opposition pressed a division on the motion to adjourn the House and were defeated by 307 to 258. The other statement was made on *Oct.* 30 by the Earl of Home, the Leader of the House of Lords, who outlined the Government's proposals for the reform of the Upper Chamber. The first was the reinforcement of the House by life peers; the second was the inclusion of life peerages for women; and the third, already begun, was payment of expenses. The Government felt that no attempt should be made to introduce a scheme of comprehensive reform until there was a wide degree of agreement among all parties, but he believed that the three measures proposed represented a sensible and practical stage in the evolution of Parliament. Viscount Alexander of Hillsborough said if there was to be fundamental reform of the House the Labour Party would be against the maintenance of the hereditary principle. Viscount Samuel thought the proposals would, without harm to the nation's liberties, help to exalt the dignity of the State and the fame of the Commonwealth, the Marquess of Salisbury supported the proposals but wished the Government had dealt with the absentee hereditary peers, and the Bishop of Chichester suggested that communions other than the Church of England should be represented among the life peers. Among the speakers on the second day of the debate was Earl Attlee, who said that as the result of experience he now believed in a second Chamber, but the hereditary system must be dealt with.

THE QUEEN'S SPEECH.—The third Session of the present Parliament was opened in State by the Queen on *Nov.* 5, when, accompanied by the Duke of Edinburgh, Her Majesty drove in the Irish State Coach to the Palace of Westminster. In the Speech from the Throne outlining the Government's legislative proposals, the Queen said that legislation would be introduced to give effect to certain recommendations of the conference about the future constitution of Singapore, and Ministers would continue to seek a just and enduring solution of the problem of Cyprus. They were resolved to take all steps necessary to maintain the value of our money and preserve the economic basis of full employment by restraining inflation and strengthening our basis of payments. Among the legislation which would be introduced would be a Bill to establish machinery for the reorganization of local government in England and Wales and another for the same purposes in Scotland. Parliament would also be invited to approve a measure to permit the creation of life peerages for men and women, carrying the right to sit and vote in the House of Lords. Besides a Bill to improve the arrangements for the industrial rehabilitation, training and resettlement of disabled persons, war pensions would be increased and legislation would be introduced to authorize increases in retirement and other benefits and in contributions under the National Insurance and Industrial Injuries schemes. In the House of Lords

the Address in reply was moved by Earl Waldegrave and seconded by Viscount Colville of Culross, and after debates on inflation, Commonwealth and foreign affairs and home affairs it was carried on *Nov.* 13. In the House of Commons the Address was moved by Lady Tweedsmuir and seconded by Mr. Rippon. Mr. Gaitskell said that the proposed change in the House of Lords did no more than tinker with the problem of the reform of the second Chamber. The Prime Minister said this was not the time to attempt an ambitious scheme of reform of the House of Lords but the Government's proposals made modest and fruitful progress along the path of evolution. On the subject of wage claims, he said the Government had no intention of interfering with the normal processes of arbitration, but it was their duty to make clear that finance could not automatically be forthcoming. Changes in conditions and improvements in wages could be made but these increases must come either out of saving or greater efficiency or out of greater productivity. During the continued debate on *Nov.* 7, Mr. Sandys, the Minister of Defence, said that in the Middle East a separate integrated command would be created at Aden, responsible direct to London. A Labour amendment regretting the omission from the Speech of any proposals to deal with the housing problem was rejected on *Nov.* 11 by 313 to 256. Mr. Brooke, Minister of Housing and Local Government, said that in their six years of office the Labour Party had produced just under one million new permanent houses, whereas in their six years the Conservative Government had produced more than 1,750,000 houses. The Address was agreed to on the following day after the defeat by 313 to 260 of an amendment moved by Mr. Gaitskell regretting the omission of policies designed to increase production and productivity and to establish better relations in industry.

The Bank Rate Tribunal.—Immediately after the raising of the bank rate during the recess, Mr. Harold Wilson informed the Financial Secretary to the Treasury that there were indications of a leakage of information about the increase. After inquiries and consultations, the Prime Minister said he was satisfied that there had been no leakage, but as the result of a further letter from Mr. Wilson the Lord Chancellor made an informal investigation into the suggestion and on his report Mr. Macmillan informed Mr. Wilson that there was no need to set up a formal inquiry. Early in the new Session, the matter was again raised by a Labour member, and on *Nov.* 13, Mr. Macmillan said the Government had been about to announce a number of important measures for dealing with the economic situation. Accordingly, the Chancellor of the Exchequer, with the Ministers of Labour and Power, had a series of separate interviews and explained these measures to various groups and to Mr. Oliver Poole, deputy chairman of the Conservative Party Organization. "In none of these interviews," said the Prime Minister, "I am assured, was any disclosure made of the intention to increase the bank rate. I accept those assurances." But in the question imputations were made, or implied, on the honour of the Chancellor of the Exchequer and on the character and probity of Mr. Poole, and both had represented most strongly that they should be given an opportunity to rebut these serious imputations. In the circumstances, he had decided that an inquiry was the right course to take and on the following day both Houses agreed to motions to set up the tribunal. Its unanimous finding that there was no justification for allegations that information about the raising of the bank rate was improperly disclosed to any person was welcomed and accepted by the House of Commons on *Feb.* 4, after a two-days' debate. Mr. Butler, moving the Government resolution, said it seemed to be a source of relief to the whole country that the high reputation which the Bank of England and the City of London as a whole had enjoyed for so long should have been vindicated. He announced that the question of part-time directors of the Bank would be studied by the Radcliffe committee which was inquiring into the working of the monetary and credit system. Mr. Harold Wilson moved an Opposition amendment which regretted the prior disclosure of secret information and called upon the Government to obviate "the present conflict between public duties and private responsibilities" of part-time directors of the Bank of England. He claimed that the tribunal had been thoroughly justified and said the Opposition accepted unhesitatingly the findings. The amendment was rejected by 320 to 256 and the Government motion was carried by 322 to 253, a majority of 69.

A New Treasury Team.—During the Christmas recess, it was announced that Mr. Peter Thorneycroft, the Chancellor of the Exchequer, and his Treasury colleagues, Mr. Enoch Powell, the Financial Secretary, and Mr. Nigel Birch, the Economic Secretary, had resigned, owing (as it was later expressed) to differences concerning the most effective means of implementing the Government's anti-inflationary policies. Mr. Heathcoat-Amory left the Ministry of Agriculture, Fisheries and Food to become Chancellor and Mr. J. E. S. Simon was appointed Financial Secretary. Shortly after the reassembly of Parliament, the economic situation was debated in the Commons on *Jan.* 23, when the new Chancellor invited the House to support the Government in their resolve to maintain by every effective means the internal and external value of the pound sterling. This motion was agreed to after the defeat by 324 to 262, a majority of 62, of an Opposition amendment, moved by Mr. Gaitskell, expressing no confidence in the capacity of Ministers to pursue policies which would secure expanding production, full employment and a stable pound. Mr. Thorneycroft himself asked for support of the motion, declaring that what mattered was not why he resigned but the future. For over twelve years, he said, we had been attempting to do more than our resources could manage and had slithered from one crisis to another, and the pound had "sunk from 20*s.* to 12 bob". The basic problem was that we should plan to spend less than we were planning to spend. He believed that living within our resources was neither unfair nor unjust, nor, perhaps, in the long run, even unpopular. Mr. Amory said that considerable economies had been accepted, but Mr. Thorneycroft believed that certain further economies should be made which would have involved changes in policy which the rest of the Government felt would be unwise. Mr. Gaitskell, introducing the Labour amendment, said that the House and the Government would have to choose between voluntary restraint and expanding production, which was what the Opposition wanted, or compulsory restraint and stagnant production, and Mr. Butler, winding up the debate, said the Government view was that if the standard of living was to be secured it was essential to win this round in the battle against inflation, to do which the Government believed they had the only opportunity.

Better Pensions All Round.—First priority was given to the Bill to increase retirement pensions and contributions and it became law on *Nov.* 28,

enabling the Government to carry out their wish that the higher rates should be paid early in 1958. The Minister of Pensions and National Insurance, Mr. Boyd-Carpenter, told the House of Commons of the Government's plans on *Nov.* 6, the second day of the Session. He said the Royal Warrant was being amended to raise the basic rate of pension for 100 per cent. disablement by 17*s.* 6*d.* a week, with proportionate increases for the less severely disabled, and the standard rate for war widows with children or for widows over 40 or incapacitated would be raised by 13*s.* 6*d.*, with appropriate increases in the rates for their children. There would also be increases in certain of the supplementary allowances paid to war disablement pensioners. The additional cost to the Exchequer of these new rates would be £16,500,000 in a full year. The Minister then announced that the standard rates of National Insurance retirement pension at minimum pension age and of unemployment and sickness benefit would be raised from 40*s.* for a single person to 50*s.* and from 65*s.* for a married couple to 80*s.* The new standard rate of widow's pension would also be 50*s.* and the widowed mother's allowance, including the payment for the first child, would go up to 70*s.* The higher rates, together with increases in industrial injuries benefits —the standard rate of the 100 per cent. disablement pension being increased from 67*s.* 6*d.* to 85*s.*, and the widow's pension from 45*s.* to 56*s.*—would add about £177,000,000 in the first full year to the expenditure of the two funds. Higher benefits must carry higher contributions and the employed man's contribution would be increased by 2*s.* to 9*s.* 5*d.* and that of his employer by 1*s.* 11*d.* to 8*s.* 1*d.*, the self-employed man's contribution going up by 2*s.* 3*d.* to 11*s.* 6*d.* These increases would involve an immediate increase of about £35,000,000 a year in the supplement from the Exchequer. When the increased retirement pensions came into force, the tobacco token scheme would be ended, but non-contributory old age pensioners would receive a special cash equivalent addition of 2*s.* 4*d.* a week. The Government had also accepted proposals from the National Assistance Board for increases in the supplementary assistance scales of 5*s.* a week for a single householder and 9*s.* for a married couple. For the Opposition, Mr. Marquand said that the niggardly increases would cause deep disappointment to the aged, unemployed and sick. The second reading of the Bill dealing with National Insurance pensions, benefits and contributions was agreed to on *Nov.* 13, when Mr. Boyd-Carpenter told the House that with the increase in the number of pensioners and the higher rates the cost of retirement pensions would be £622,000,000 next year compared with £463,000,000 in the current year, while the cost of national insurance benefits generally would be £897,000,000 compared with £685,000,000. After the formal second reading, Labour opposed a resolution repealing the tobacco token scheme, but were defeated by 294 to 226. The committee stage opened on *Nov.* 18 when Mr. Dingle Foot moved an amendment to provide that the Minister could increase the amount of benefit under the Bill by the amount of the increase in the cost of living. The Minister said this would be a change for the worse, and it was rejected by 226 to 199. Another Labour attempt to delete the provision repealing the tobacco relief was defeated by 253 to 213 on the following day, and on *Nov.* 20 the Bill was read a third time, and was speedily passed by the House of Lords, receiving the Royal Assent on *Nov.* 28. The Chancellor of the Exchequer, Mr. Heathcoat-Amory, told the Commons on *Feb.* 18 that because of the increasing cost of the health services, of which the Exchequer's share in the coming financial year would be £555,000,000, the Government had decided that from July the national health contribution would be increased by 6*d.* for men, 4*d.* for women, and 2*d.* for juveniles, with an additional 2*d.* from the employers, yielding about £24,000,000 in the coming year and £32,000,000 in a full year. The resolution confirming the increases was carried by 302 to 230 on *Feb.* 25. The necessary Bill was read a second time in the Commons on *March* 5 by 308 to 252, and passed through committee on *March* 11. Opposition attempts to postpone the implementation of the alterations until after the next general election and to restrict the ages of those to whom the new contributions applied were defeated. The third reading was carried by 307 to 237 on *March* 24 after Mr. Richard Thompson, Parliamentary Secretary to the Ministry of Health, had stated that with the increased rates the Exchequer would still meet 72 per cent. of the total cost and the contributors less than the 20 per cent. which it was thought proper for them to bear when the 1946 legislation was introduced. The Bill received the Royal Assent on *April* 30.

Life Peers in the Lords.—A minor reform of the House of Lords was effected by the Life Peerages Bill, presented in the Upper Chamber on *Nov.* 21, which empowered the Sovereign to confer a peerage for life entitling the recipient to rank as a baron and to sit and vote in the House of Lords, and expiring on his death. Further, it declared that a life peerage might be conferred on a woman. The Bill was read a second time after a two-day debate in the Upper Chamber on *Dec.* 5, without a division but with considerable criticism. The Earl of Home said that in selecting persons to become peers the emphasis would be on those who could help in the working of Parliament. Lord Salisbury regarded the proposals as sadly inadequate, and disagreed with the provision by which women could become life peers whereas women who had the right to sit could not become members of the House. Winding up the debate, the Lord Chancellor said the Government were concerned to strengthen the House in its day-to-day working. The House, on *Dec.* 10, agreed to a motion by Lord Swinton approving the report of the select committee on the question of granting leave of absence to peers and proposing the appointment of another committee to frame standing orders on the subject. In committee on *Dec.* 17 an amendment designed to prevent the inclusion of women among life peers, moved by the Earl of Airlie, was rejected by 134 to 30. The Bill was read a third time and passed on *Jan.* 30, and after a two-day debate, the House of Commons on *Feb.* 13 gave it a second reading, a Labour amendment for rejection because the proposals left the Upper Chamber overwhelmingly hereditary in character "and with unimpaired powers to frustrate and obstruct the will of the elected representatives of the people" being defeated by 305 to 251. Mr. Butler said that life peers would be appointed by the Crown on the recommendation of the Prime Minister, and it would be natural for him to consult the Opposition. Moving the amendment, Mr. Gaitskell said that any further change in the composition of the House of Lords was likely to be in the direction of increasing its prestige and authority, and in the Opposition's opinion its present powers were excessive. Mr. Bevan said the Bill left the powers of their lordships untouched and thereby made the Bill offensive to the Opposition, and in reply to a Minister said he and his colleagues were prepared to have informal talks on a reformed House provided there were no prior conditions. The committee

stage was completed on *March* 25 after the rejection of amendments to exclude persons born or domiciled in Scotland from those upon whom the life peerages could be conferred, to limit the number of life peers to 100, and to leave out the provision permitting women to be given life peerages. On *April* 2, the third reading was carried by 202 to 241, and the Royal Assent was given on *April* 30. Before the names of the first life peers (four women and ten men) were announced on *July* 24, the Upper Chamber agreed to a new standing order implementing the proposal under which peers unable to attend the House might be granted leave of absence for a period.

A CAUTIOUS BUDGET.—Mr. Heathcoat-Amory's first Budget, opened on *April* 15, was, in his own words, one that consolidated what we had gained and was at the same time flexible and forward-looking. Its features were a simplification of the purchase tax, the halving of the Entertainments Duty on cinema seats, and a reduction in the Stamp Duty to help people buying houses. The Chancellor said that the growth of home production in 1957 was small, and as a nation we had failed to halt inflation. In several important respects recent months had shown greater stability. At present the terms of trade were exceptionally favourable to us, and we now had a golden opportunity at least to halt, and possibly to reverse, the trend of rising prices from which we had suffered for so many years. Mr. Amory said that revenue in the preceding year was £5,343,000,000, and expenditure above the line was £4,920,000,000, providing a surplus of £423,000,000. Below the line net payments were £635,000,000, the difference to be financed by borrowing being thus £212,000,000. In the hope of increasing Exchequer receipts from small savings, he announced that the limit on holdings of the current issue of National Savings Certificates would be raised from 600 units to 1,000 units on May 1, when he would also issue a new Defence Bond, carrying interest at 5 per cent. and repayable in seven years at the rate of £103 for each £100 invested. He estimated total revenue for the new financial year at £5,490,000,000, and total expenditure above the line at £5,075,000,000. On the basis of existing taxation, therefore, there was an estimated surplus above the line of £415,000,000, and with net total expenditure below the line of £600,000,000, he expected a deficit overall of £185,000,000. The Chancellor thought employment would remain at a generally high level, provided we maintained our competitive power. But with our foreign customers running into difficulties, export demand might weaken. He did not believe that a sudden sharp recession in this country during the coming months was likely. The Government's first priority must continue to be to finish winning the battle against inflation. It was too soon to contemplate any general relaxation on the economic front, and our present policy must be to consolidate our improved position. As a Government they were convinced that the long-term welfare of the country demanded a steady expansion of our national economy, and they would not keep the brakes on one day longer than they must. He saw no prospect of mass unemployment at the present time, but they must not overlook "the intractable problem" of patches of severe and persistent unemployment. He had informed the banks that the Government would not wish any projects for sound developments in areas where unemployment was substantially above the average to be held back by lack of credit or finance. Further, a Bill would be introduced to enable the Treasury to give financial assistance to a trade or business if it were required to raise the level of employment in a locality where a relatively high rate of unemployment existed. The Government were ready to make finance available to assist in the provision of dry docks in development areas. Coming to his proposals in taxation, the Chancellor said he proposed to stop "an activity known as dividend stripping", a device for extracting the liquid taxed reserves of one company, with considerable income tax advantage, to another company, which obtained those reserves as taxed dividends, at a considerable cost to the revenue. The provisions to be made would be retrospective to Oct. 26, 1955. To help people who wished to buy their houses, he improved the sliding scale of graduation of stamp duty on conveyances of property, making consideration up to £3,500 exempt, and the full rate of £2 per cent. apply only above £6,000. He proposed to extend the income tax exemption limits from £400 to £440 for the married couple where either husband or wife was 65 or over, and from £250 to £275 for the single person of 65, and to increase from £700 to £800 the income limit for the age relief given where the taxpayer or in a married couple one of the spouses was 65, which meant that the whole of the income would be treated for tax purposes as if it were earned income. Death duty would be levied only once in cases where husband and wife died together, perhaps in an accident. "A considerable reform in company taxation" was the replacement of the two rates of profit tax at present charged by a single rate of 10 per cent., levied on the whole of a company's profits distributed and undistributed, and he increased the present initial allowances on industrial investment for plant, machinery and building. Turning to indirect taxation, he proposed to reduce the duties on heavy wines by 12s. a gallon, equivalent to 2s. a bottle, the existing preference margin for Commonwealth wines being maintained. Mr. Amory said he was satisfied that the present level of the entertainments duty was too high in the changed circumstances. He proposed to reduce the rate to 33⅓ per cent. of the amount by which the total admission price exceeded 1s. 6d. Dealing with purchase tax, the Chancellor said he saw little prospect of changing over to a retail sales tax at a very low rate, but he proposed to simplify the purchase tax. He was reducing the number of rates from seven to four by abolishing the 90, 50 and 10 per cent. rates. Goods now charged at 90 and 50 would be chargeable at 60 or 30 per cent., none being increased. Tax would be lifted altogether from wool cloth but clothing made from such cloth would bear tax at 5 per cent., and he was moving down to the 30 per cent. rate a large selection of goods now chargeable at 60 per cent., including gas and electric appliances, such as washing machines, refrigerators, vacuum cleaners and so on. After outlining other reductions, the Chancellor said the changes which he proposed would cost £50,500,000 this year and £108,000,000 in a full year, which left him with an estimated surplus above the line of £364,000,000 and an estimated overall deficit of £236,000,000. He thought his proposals lightened some of the burdens on the taxpayers as well as improving our fiscal system, and would help to strengthen our economy. The Opposition divided the House on the resolution relating to the changes in profits tax, but it was carried by 300 to 224. On the following day, Mr. Harold Wilson said the Opposition thought the Chancellor had muffed a challenging opportunity and had produced a pathetic little mouse of a Budget. With the exception of the measures about profits tax, which they regarded as a retrograde step, the proposals were trivial and irrelevant. Sir

David Eccles announced that the export credit department would in future give direct bank guarantees in respect of sales of not less than £100,000 to exporters of major capital goods, instead of not less than £250,000, and would increase the amount covered from 85 per cent. to 90 per cent. The remaining resolutions were agreed to on *April* 21, and the Finance Bill was brought in and read a first time. The Chancellor announced on *April* 29 that he had dropped the retrospective legislation on "dividend stripping" and the clause would take effect from Budget Day. He also restored the exemption from purchase tax of miners' and quarrymen's protective helmets. The second reading of the Finance Bill was carried by 315 to 247 on *May* 12, when Mr. J. E. S. Simon, the Financial Secretary to the Treasury, told the House that the Government had decided that where a beneficiary was absolutely entitled under a policy of insurance for a sum of money payable on the death of another person no estate duty would be charged on the death of that person, provided the beneficiary became entitled more than five years before the death and that the life assured neither retained any benefit for himself nor paid any premiums within five years. The committee stage was opened on *May* 19, when the Chancellor, during a discussion on purchase tax, expressed the hope that in the future there would be opportunities for making some further progress in the direction of achieving a tax which, while spreading over a wide field, would be at only a moderate rate. On *June* 11, Mr. Amory accepted an amendment to exempt cane and wicker baskets from purchase tax and another to reduce the tax on clogs. He announced on *June* 17 that to encourage industrial development he intended to double the increase in initial allowances for plant and machinery and industrial building, raising them to 30 per cent. and 15 per cent. respectively, to date from Budget Day. A Conservative amendment reducing by 75 per cent. the duty payable on property on the later of two deaths if they occurred within three months was accepted by the Chancellor on *July* 1. Before the committee stage was concluded on *July* 3, he told the House that after the end of July the Banks need not restrict the total level of their advances to any given figure and that he had decided to exempt capital schemes of below £50,000 from consideration by the Capital Issues Committee, control for total advances by the banks being retained by normal monetary measures. The report stage concluded on *July* 15 and the third reading took place on *July* 18, when Mr. Amory estimated that the tax reductions resulting from the Bill would amount to about £51,500,000 in the present year and about £130,000,000 in a full year. The Upper Chamber passed the Bill on *July* 30 and it received the Royal Assent on *Aug.* 1, when Parliament adjourned for the summer recess until *Oct.* 23.

THE FOREIGN SITUATION.—The first foreign affairs debate of the Session took place on *Dec.* 20, immediately after the return of the Prime Minister and the Foreign Secretary from the "Heads of Government" conference of N.A.T.O. in Paris. Mr. Selwyn Lloyd said Britain's policy was to strengthen the effectiveness of the alliance. It had been agreed to accept the United States offer to stock nuclear warheads and weapons in Europe, and to strengthen the nuclear deterrent by the introduction of intermediate range ballistic missiles. They were also seeking to apply the doctrine of interdependence in the military field. On the subject of disarmament, he said that if there had been adequate preparation for a summit meeting and if there seemed any chance that it would produce results, they were ready to be a party to it. Mr. Aneurin Bevan said there existed between us and the Communist world at least one common bond and that was to avoid a third world war breaking out. On the subject of the supply of warheads and missile bases under United States control, he said the Opposition were prepared to abrogate British sovereignty for international purposes, but not to add to the sovereign power of another nation. Winding up the debate, Mr. Macmillan agreed that Britain and Russia had a common interest in the avoidance of war. The Government's policy was really two-fold and simple: a firm and powerful N.A.T.O. militarily, but always to be ready to discuss and negotiate on a practical basis to get practical results. The Government considered that their contribution to the naval forces of N.A.T.O. would be more effective if it concentrated more on anti-submarine warfare and less on the offensive strike rôle, which might well be left to the United States. With regard to the control of American bombers when carrying hydrogen bombs during patrols over the United Kingdom, Mr. Macmillan claimed that there would be complete negative control for Britain—there was a complete veto. On the formal motion to adjourn, the Government had a majority of 38, the figures being 289 to 251 with five of the Independent Conservatives abstaining. The Labour Party also went into the division lobby against the Government on *Feb.* 20 after a two-day debate, during which Mr. Macmillan spoke with enthusiasm of the feeling he had found during his Commonwealth tour, from which he had just returned, and declared that he wanted a summit conference but he wanted it to be successful and insisted on the need for serious preparatory work. The formal motion for the adjournment was carried by 308 to 242, a Government majority of 66. The Commons, on *Feb.* 27, carried by 317 to 261 a motion approving the Government's statement on defence, after defeating by 318 to 263 an Opposition amendment declining to approve a policy which relied predominantly on the threat of thermonuclear warfare. The Upper Chamber approved the policy on *March* 6, rejecting a Labour amendment by 94 to 25. Concern regarding the situation abroad was abruptly concentrated on the Middle East shortly before the adjournment for the summer recess, as a result of the landing of United States Marines in the Lebanon and the revolt in Iraq. The Foreign Secretary, on *July* 15, told the Commons that the Government were informed in advance of the United States' action and believed that it was necessary to preserve the independence and integrity of the Lebanon. On the following day, Mr. Gaitskell said the Opposition did not intend to divide the House, but they were very apprehensive about what had been done. "We do not want disunity in the nation on this great issue," he said, "I hope it will be possible to preserve unity." Winding up the debate, the Prime Minister said there had been subversion and foreign intervention in the Lebanon and a whole campaign organized from outside on a large scale. He expressed gratitude for the attitude of the House. The Opposition, on *July* 17, indicated their disapproval of the British landing in Jordan by dividing again on the formal motion for the adjournment, which resulted in a Government majority of 63. Mr. Macmillan said the Government were morally bound to go to the help of a small friendly country which they had helped so much in the past. He pointed out that the Opposition had not divided the House when the United States took action; today it was thought necessary to divide when it was our own country that had

acted. The position was again transformed on *July* 22 when the Foreign Secretary announced that the Prime Minister was willing to attend a summit conference at a special meeting of the Security Council under the Charter of the United Nations Organization to consider Middle East problems. Mr. Bevan said the Government's policy would be supported in all parts of the House, and on *July* 31 Mr. Gaitskell welcomed Mr. Macmillan's promise to attend such a meeting if it were held.

LOCAL GOVERNMENT FINANCE.—The most important proposal in the Government's Local Government Bill, introduced in the House of Commons on *Nov.* 19, was one to replace a number of existing grants to county and county borough councils by a new general "block" grant, to cover education, health services, fire services and child care, from April 1, 1959. This general grant would be fixed periodically by Parliament, and would take into account population and density and numbers of school children and old people. The Bill also proposed that industry would be re-rated at 50 per cent. of net annual value instead of 25 per cent., and provided for the setting up of commissions for England and Wales to review the areas of counties and county boroughs. Mr. Henry Brooke, Minister of Housing and Local Government, moving the second reading on *Nov.* 19, said the theme of the financial provisions was to enable local authorities to exercise greater freedom of responsibility over the spending of money in their own areas. There would be consultation with the local authority associations before the order fixing the amount of the general grant was laid before Parliament. The new system assured to the major local authorities a source of income on the same footing as their rate income in that it was available for them to apply in the best interests of their own services. The Government were prepared to trust the elected representatives of the people. The general grant would be an incentive to local authorities to get the utmost values for their money. Moving the rejection of the Bill, Mr. Bottomley said it did little to reorganize the functions of local authorities on a sensible basis. There were no assurances that the block grant would be adequate. Mr. Geoffrey Lloyd, Minister of Education, said on *Dec.* 10 that it was no part of the Government's policy to reduce the central grant aid to local education authority expenditure on education, and no part of its policy to freeze that contribution at its present level. The general grant would be fixed having regard to Government policy and to the average establishment necessary for guaranteeing the educational services. The Opposition amendment was defeated by 309 to 252, and the Bill was sent to a standing committee by 308 to 251. A Labour amendment to exclude education from the working of the block grants system was rejected by the committee by 22 to 18 on *Feb.* 6, and on *Feb.* 20 the block grants clause was ordered to stand part of the Bill by 22 to 19. The third reading of the measure was given by 306 to 233 on *May* 13. After a second reading on *June* 10, the Upper Chamber, in committee on *June* 23, rejected by 50 to 25 an amendment to exclude education from the general grant, and read the Bill a third time on *July* 10, the Royal Assent being given on *July* 23.

HELP FOR DECONTROLLED TENANTS.—The law of landlord and tenant was amended by a Bill delaying in certain cases the eviction of tenants from houses decontrolled, which received the Royal Assent on *Aug.* 1. It empowered a county court to grant a longer delay than was possible under the Rent Act before a landlord could regain possession, provided the occupier made all reasonable efforts to reach agreement with the landlord for a tenancy of not less than three years, that he had taken all reasonable steps to find "appropriate accommodation", and that the making of an order for immediate possession would cause greater hardship to the occupier than suspending the order would cause to the landlord. The suspension could be for a period of not less than three or more than nine months, and could be extended for another six months. The Bill was given a second reading on *April* 24, and after being considered by a standing committee came again before the House on *June* 23, when Mr. Brooke, the Minister of Housing and Local Government, moved an amendment which would disqualify an occupier or tenant from obtaining a suspension only if he refused an offer of a new tenancy that he could reasonably be expected to accept. This would protect a tenant from the offer of a new agreement involving a premium or one that included a back-dated rent increase. A Labour amendment declaring that a back-dated increase should be treated as a premium was rejected by 215 to 163, and the Government proposal was agreed to. The Bill was then read a third time and was passed by the House of Lords on *July* 24.

THE RIGHTS OF THE INDIVIDUAL.—Little opposition was offered to an important measure which the Home Secretary, Mr. Butler, described as involving deeply and closely the lives of hundreds of thousands of British citizens and one which he was sure would be regarded as a notable addition to the long series of measures stemming from Magna Carta and the Bill of Rights, which preserved our individual liberties. It was the Tribunals and Inquiries Bill, which implemented many of the recommendations of the report of a committee under Sir Oliver Franks. It provided for the appointment of an Advisory Council on Tribunals to keep under review the constitution and working of 45 categories of tribunal to ensure fairness as between the individual and Government departments and to make general recommendations on the membership of tribunals or on the panels from which members are drawn. The Bill gave a right of appeal on points of law to the High Court, with a further appeal to the Court of Appeal from decisions of certain tribunals, and during the report stage in the House of Commons a Government amendment to remove restrictions on the right of appeal to the House of Lords was agreed to. The Upper Chamber passed the measure on *May* 20, and the Commons approved its third reading on *July* 25, the Royal Assent being given on *Aug.* 1.

SOME MINOR BILLS.—Private members had considerable success in securing the passage of their Bills, about a score being added to the Statute Book during the Session. Among them was a measure sponsored by Mr. Arthur Moyle, intended to safeguard the welfare of children of broken marriages by extending the powers of courts to make orders relating to such children to ensure that satisfactory arrangements were made for them before a decree was made absolute, welfare officers being appointed to supervise the arrangements in the towns which have divorce courts. Another measure, introduced by Sir Hugh Lucas Tooth, gave courts in matrimonial proceedings power to provide alimony or maintenance or the securing of a sum of money to be exercised at any time after a decree. Persons who dropped litter in any open air place to which the public have access without payment became guilty of an offence and liable to a fine of £10 by a Bill brought forward by Mr. Rupert Speir.

Government and Public Offices

The Civil Service in the United Kingdom is divided into classes, each with a series of grades. The *Administrative Class*, which consists largely of university graduates, advises Ministers on policy, deals with any difficulties arising from current policy and forecasts the probable effects of new measures and regulations. The *Executive Class* is responsible for the day to day conduct of Government business within the framework of established policy. The *Clerical Class* undertakes all the clerical work of departmental business, *e.g.* the preparation of accounts and keeping of records and the handling of particular claims in accordance with known rules. The *Professional, Scientific and Technical Classes* include doctors, lawyers, engineers, etc. *Departmental Classes*, confined to one or two departments, include the Tax Inspectorate, Factory Inspectorate and Customs Waterguard.

NOTE.—The salaries shown are in most cases those actually received. In certain instances, however, the National Scale without corresponding London weighting is given.

ADMIRALTY

(*see* Royal Navy)

MINISTRY OF AGRICULTURE, FISHERIES AND FOOD

Whitehall Place, S.W.1. †
[Trafalgar: 7711]

The Ministry of Agriculture, Fisheries and Food was established in April 1955 and assumed the responsibilities previously discharged by the Ministry of Agriculture and Fisheries and the Ministry of Food.

The Ministry has a general responsibility for food supplies, both home produced and imported, and for food manufacture, distribution and storage.

It is responsible generally for the efficiency of the agricultural, horticultural and fishing industries in England and Wales; this involves:—grant and subsidy schemes and the provision of certain trading services; schemes designed to improve the quality of livestock and agricultural produce, to control or eradicate animal diseases, plant diseases, and pests, and to facilitate production on marginal land; market intelligence and technical advice on food production; agricultural education, research applied to agriculture, horticulture and fisheries, and land drainage, enforcement of agricultural wages awards, safety, welfare and labour supply. With other Government Departments, the Ministry is concerned with improving such rural services as housing, farm buildings, water supplies and electricity, with the supply of machinery, fertilisers and seeds and with land use. It is also concerned with the purchase and sale of land by the Minister and with general land management questions.

The Ministry administers, in England and Wales, the guarantees to farmers under the *Agriculture Acts*, 1947 and 1957, including deficiency payments schemes for fatstock and for the main cereal crops. It is also generally responsible for schemes for milk, eggs, potatoes and wool operated through producers' marketing boards.

The Ministry is concerned with the interests and development of the fishing industry in England and Wales, including the processing and distributive trades, whaling and research.

The Ministry has primary responsibility for administering part of the food and drugs legislation, in particular the composition of food, labelling and advertising. It is responsible for research applied to food nutrition, technology and defence and for matters concerning slaughterhouses and meat inspection, and for legislation relating to the quality and cleanliness of milk; the Ministry maintains relations with Commonwealth and other countries and contributes to the work of a number of international bodies, in regard to agriculture and food.

The Ministry is also responsible for the Royal Botanic Gardens, Kew, and the Ordnance Survey Department.

Minister of Agriculture, Fisheries and Food, THE RT. HON. JOHN HUGH HARE, O.B.E., M.P. £5,000
Private Sec., J. H. Locke.

† Unless otherwise stated, Divisions of the Ministry are at this address.

Assistant Private Secs., W. R. Small; Miss J. E. Arthur.
Parliamentary do., A. B. C. Harrison, M.P. . *unpaid*
Parliamentary Clerk, M. F. Grant ..... £1,310 to £1,555
Parliamentary Secretaries, The Earl Waldegrave, T.D.; J. B. Godber, M.P. £2,500
Private Secretaries, J. E. Dixon; E. G. Smith.
Permanent Secretary, Sir Alan Hitchman, K.C.B. £5,950
Chief Scientific Advisers: (*Agriculture*) Professor H. G. Sanders, £4,200; (*Food*) Dr. N. C. Wright, C.B. £3,350
Liaison Officers, Sir Cecil Armitage, C.B.E.; Major J. W. Fitzherbert-Brockholes, C.B.E., M.C.; The Lord de Ramsey, T.D.; Col. Sir Robert Gooch, Bt., D.S.O.; E. G. E. Griffith; E. G. Parsons; R. Phillips, D.Sc.; Col. N. V. Stopford Sackville, O.B.E., T.D.; Sir Donald Scott; D. Skilbeck, C.B.E.; L. G. Troup, O.B.E.; R. W. Trumper, C.B.E.; Capt. N. G. Garnons Williams, M.B.E., R.N. (*ret.*) ..... *unpaid*

Administrative Departments

GROUP A

Deputy Secretary, H. Hardman, C.B. £4,200

SUB-GROUP (*a*)

Under Secretary, W. C. Tame £3,350

LIVESTOCK IMPROVEMENT AND HILL FARMING DIVISION

Assistant Secretary, H. E. Bannister ..... £2,050 to £2,650
Principals, F. J. S. Culley; G. R. Woodward ..... £1,410 to £2,000
Senior Executive Officers, S. R. Males; Miss N. E. Skrimshire, M.B.E.; K. P. Stones.
Men, £1,310 to £1,555; *Women*, £1,238 to £1,468
Director, National Stud, *P. E. Burrell, C.B.E. £1,640

FATSTOCK MARKETING DIVISION

Government Buildings, Epsom Road, Guildford, Surrey
[Guildford: 68121]

Assistant Secretary, P. H. Andrews, C.B.E. ..... £2,050 to £2,650
Principal, S. H. Moore ..... £1,410 to £2,000
Chief Executive Officers, J. L. Cope; R. O. Williams ..... £1,670 to £1,885
Senior Executive Officers, K. A. Bird; E. W. Warren; V. A. Woodbridge; W. F. Wright ..... £1,310 to £1,555
Senior Technical Officers, S. W. Baldwin; *V. G. Clarke; O. G. Treharne ..... £1,310 to £1,555
Markets Adviser, *Brig. G. L. Lillies, O.B.E. (*part-time*) £1,200
Chief Fatstock Officer, A. M. Taylor ..... £1,850 to £2,050
Deputy Chief Fatstock Officer, J. T. Robinson ..... £1,670 to £1,885
Chief Fatstock Officer, W. M. Gillespie ..... £1,850 to £2,050
Deputy Chief Fatstock Officer, R. Kyles ..... £1,670 to £1,885
Marketing Officer Grade II, A. A. N. Beveridge ..... £1,325 to £1,528

MEAT DIVISION

Assistant Secretary, J. Graham ..... £2,050 to £2,650
Principals, E. H. Doling; G. K. Myers ..... £1,410 to £2,000
Senior Executive Officers, H. C. Carter; G. C. Hampson ..... £1,310 to £1,555

Marketing Officer, Grade II, N. J. Meredith £1,325 to £1,528

SUB-GROUP (*b*)

Under Secretary, F. Hollins..... £3,350

HORTICULTURE DIVISION

Assistant Secretary, P. J. Moss.... £2,050 to £2,650
Principals, W. F. Darke; L. J. Gray; J. R. Moss £1,410 to £2,000
Trade Adviser on Fruit and Vegetables, R. I. Payne, O.B.E..... £1,670 to £1,885

EGGS, POULTRY AND POTATO DIVISION

Assistant Secretary, R. P. Askew £2,050 to £2,650
Principals, A. L. Irving, O.B.E.; Miss U. C. C. Padel
Men, £1,410 to £2,000; *Women*, £1,341 to £1,902
Senior Executive Officers, R. W. Moolenaar; J. C. Parkinson, M.B.E..... £1,310 to £1,555

SUB-GROUP (*c*)

Under Secretary, J. A. Sutherland-Harris..... £3,310

AGRICULTURAL ECONOMICS UNIT

Senior Principal Agricultural Economist, L. Napolitan (+*allce.*) £2,050 to £2,350
Heads of Branches, E. A. G. Shrimpton (*Statistician*) (+*allce.*) £1,410 to £2,000; J. Ashton (*Principal Agricultural Economist*) (+*allce.*) £1,410 to £2,000
Principal Agricultural Economists, K. Dexter; J. A. Evans..... £1,410 to £2,000
Statisticians, Mrs. G. Cartwright; Miss A. O. G. Tanner..... £1,341 to £1,902
Senior Executive Officers, E. O. Forsberg, M.B.E.; P. J. Pascall..... £1,310 to £1,555

ECONOMIC ADVICE AND FOOD CONSUMPTION DIVISION

Assistant Secretary, J. H. Kirk, C.B.E. £2,050 to £2,650
Assistant Director, C. J. Brown... £1,850 to £2,050
Principal, Miss I. O. H. Lepper.. £1,341 to £1,902
Statistician, A. H. J. Baines..... £1,410 to £2,000
Chief Executive Officer, H. M. Affix £1,670 to £1,885

Secretary (Welsh Sub-Commission), R. Davies £1,285 to £1,530
Land Agent (do.), E. O. Hughes (+*allce.*) £1,215 to £1,640

AGRICULTURAL RESEARCH COUNCIL

Cunard Building, 15 Regent Street, S.W.1

The Agricultural Research Council was incorporated by Royal Charter on July 23, 1931. In accordance with the provisions of the *Agricultural Research Act*, 1956, the Council is charged, under a Committee of the Privy Council, with the organization and development of agricultural research and may, in particular, establish or develop institutions or departments of institutions and make grants for investigation and research relating to the advance of agriculture. The Council's finance is, under the 1956 Act, derived from the Agricultural Research Fund into which monies provided by Parliament for the purpose of the Act, and other sums received by the Council, are paid.

Council, The Duke of Northumberland (*Chairman*); D. Lowe, C.B.E. (*Deputy Chairman*); J. D. Alston; Prof. T. A. Bennet-Clark, PH.D., F.R.S.; Prof. E. G. Cox, T.D., D.SC., F.R.S.; L. G. Davidson, C.B.; R. E. Glover, D.SC.; J. Hensley; Prof. J. W. Howie, M.D.; Elwyn Jones; Prof. Sir Hans Krebs, M.D., F.R.S.; Prof. K. Mather, C.B.E., D.SC., PH.D., F.R.S.; Prof. P. B. Medawar, C.B.E., D.SC., F.R.S.; F. Rayns, C.B.E.; J. N. Ritchie, C.B.; Prof. H. G. Sanders, PH.D.; Prof. S. J. Watson, D.SC., F.R.S.E.; Prof. Sir Solly Zuckerman, C.B., M.D., D.SC., F.R.S.
Secretary, Sir William Slater, K.B.E., D.SC., F.R.S.
Deputy Secretary, W. G. Alexander, C.B.E.
Assistant Secretaries, W. Ness; P. A. C. Thorne; A. J. D. Woods, C.B.E.
Scientific Assistants to the Secretary, E. E. Cheesman, D.SC.; R. Scarisbrick, PH.D.; G. G. Samuel.
Principals, J. S. F. Law; L. S. Porter; A. Oates.
Chief Executive Officer, J. H. Shimwell.
Senior Executive Officer, T. E. Pearson.

For the Research institutes under the control of the council, *see Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the various Commonwealth Governments, and of the Colonial Office, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Commonwealth and Empire. The Governments of the Commonwealth and Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the

Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman, T. Swaminathan.
Vice-Chairman, J. Q. Malloch, M.B.E., Ph.D.
Secretary, Sir Herbert Howard.

Institutes

Commonwealth Institute of Entomology, Natural History Museum, S.W.7. *Director*, E. O. Pearson.

Dairy Science and Technology, National Institute for Research in Dairying, Shinfield, nr. Reading.—*Director*, E. J. Mann.
Forestry, Imperial Forestry Institute, South Parks Road, Oxford.—*Director*, F. C. Ford Robertson.
Helminthology, The White House, 103 St. Peter's Street, St. Albans, Herts.—*Director*, J. M. Watson, D.Sc.
Horticulture and Plantation Crops, East Malling Research Station, East Malling, nr. Maidstone, Kent.—*Director*, D. Akenhead, O.B.E.
Commonwealth Bureau of Pastures and Field Crops, Hurley, nr. Maidenhead, Berks.—*Director*, A. G. G. Hill.
Plant Breeding and Genetics, School of Agriculture, Downing Street, Cambridge—*Director*, P. S. Hudson, O.B.E., Ph.D.
Soils, Rothamsted Experimental Station, Harpenden, Herts.—*Director*, G. V. Jacks.

AIR MINISTRY

(*see* Royal Air Force)

AIR TRANSPORT ADVISORY COUNCIL

3 Dean's Yard, S.W.1

The Council is a statutory body which considers representations from the public regarding the air transport facilities provided by the Airline Corporations and the charges for any such facilities, and questions referred to it by the Minister of Transport and Civil Aviation. It also considers in accordance with terms of reference issued to it by the Minister of Civil Aviation on July 30, 1952, applications from the Airline Corporations and independent air transport companies to operate scheduled air services under the arrangements announced by the Minister on May 27, 1952.

Chairman, The Lord Terrington, K.B.E.
Deputy Chairman, Air Marshal Sir John D'Albiac, K.C.V.O., K.B.E., C.B., D.S.O.
Members, Sir John Ure Primrose; J. J. Taylor, O.B.E.
Assessor, W. W. Burkett, C.B.E., M.C.
Secretary, K. J. Willoughby.
Assistant Secretary, E. W. G. Wilkins.

COLLEGE OF ARMS OR HERALDS COLLEGE

Queen Victoria Street, E.C.4
[City: 2762]

The College of Arms is open daily from 10–4 and an Officer of Arms is always in attendance to deal with enquiries by the public. But such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who all specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, and Commonwealth families and their descendants, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., P.C., G.C.V.O., Royal Victorian Chain.

Kings of Arms

Garter, Hon. Sir George Rothe Bellew, K.C.V.O., F.S.A.

Chester, James Arnold Frere, F.S.A.
York, The Lord Sinclair, M.V.O.

Four Pursuivants

Rouge Dragon, Robin de la Lanne Mirrlees.
Rouge Croix, Walter John George Verco, M.V.O.
Bluemantle, John Philip Brooke Brooke-Little.
Portcullis, Alexander Colin Cole.

COURT OF THE LORD LYON

H.M. Register House, Edinburgh
[Edinburgh: 30137]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Seannachie* of Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court, and by Letters Patent. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and petitioners (personal or corporate) in Her Majesty's overseas realms of Scottish connection, and issues birthbrieves. In Scots Law, Arms are protected by

Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£50) and matriculations (£20) are payable to H.M. Exchequer.

Lord Lyon King of Arms, Sir Thomas Innes of Learney, K.C.V.O., LL.D., F.S.A.*Scot.*, Advocate £1,200

Three Heralds (£25 each)

Rothesay, Lt.-Col. H. A. B. Lawson, F.S.A.*Scot.*
Albany, Major Charles Ian Fraser of Reelig.
Marchmont, James Monteith Grant, W.S.

Three Pursuivants (£16 13s. 4d. each)

Unicorn, Sir Iain Moncreiffe of Moncreiffe, Bt., Advocate.
Kintyre, Charles Eliot Jauncey, Advocate.
Carrick, Malcolm Rognvald Innes of Edingight.

Lyon Clerk and Keeper of Records, Harold Andrew Balvaird Lawson. £750
Procurator-Fiscal, Malcolm Robertson MacGregor, W.S.
Herald Painter, Miss Nora Gordon.
Macer, Thomas C. Gray.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

5 Old Palace Yard, S.W.1
[Whitehall: 3935]

Appointed in May, 1924, "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—" so that it shall also be open to the said Commission, if they so desire, to call the attention of any of Our Departments of State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, The Lord Bridges, P.C., G.C.B., G.C.V.O., M.C., F.R.S.

Commissioners, John Betjeman; Hon. Lionel Brett; Louis de Soissons, C.V.O., O.B.E., R.A.; Frederick Gibberd, C.B.E.; Sir William Holford; G. A. Jellicoe; Sir Thomas Merton, K.B.E., F.R.S.; Lord Methuen, R.A.; Henry Moore, C.H.; Sir Allan Quartermaine, C.B.E., M.C.; Prof. J. M. Richards; Sir Arthur Richmond, C.B.E.; Sir Howard Robertson, M.C., R.A.; Basil Spence, O.B.E., R.A.; Prof. Geoffrey Webb, C.B.E.

Secretary, Hon. Godfrey Samuel.

ROYAL FINE ART COMMISSION FOR SCOTLAND

Royal Scottish Museum, Edinburgh 1

[Tel.: Edinburgh Caledonian: 7534]

Appointed in 1927 "to enquire into such questions of public amenity or of artistic importance relating to Scotland as may be referred to them by any of our Departments of State, and to report thereon to such Departments; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies when it appears to the said Commission that their assistance would be advantageous." Under Royal Warrant of May 8, 1953, the terms of reference of the Commission were extended so that it is now open to the Commission, if it so desires, to call the attention of any Department of State or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the Commission may appear to affect amenities of a national or public character; and to call before it any persons, examine any documents or visit any places it might deem expedient for the more effectual carrying out of its duties.

Commissioners, Sir Hector Hetherington, K.B.E. (*Chairman*); Lady MacGregor of MacGregor, O.B.E.; Charles d'O. Pilkington-Jackson, A.R.S.A.; J. Cameron Smail, O.B.E., LL.D., F.R.S.E.; A. Graham Henderson, R.S.A., P.P.R.I.B.A.; William H. Kininmonth, R.S.A., F.R.I.B.A.; R. H. Matthew, C.B.E., A.R.S.A.; Ian G. Lindsay, O.B.E., A.R.S.A., F.R.I.B.A.; The Earl Haig.
Secretary, Ian Finlay.

NATIONAL GALLERY

Trafalgar Square, W.C.2
[Whitehall: 7628–9]

Hours of opening.—Weekdays 10 to 6, Sundays 2 to 6. Admission free. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1876, 1887, 1911, 1928, 1930 and 1937. Expenses for 1958–59 were estimated at £84,080.

TRUSTEES

Prof. L. C. Robbins, C.B., F.B.A.; The Earl of Crawford and Balcarres, K.T., G.B.E.; Lord Herbert, C.V.O.; Brinsley Ford; Sir Thomas Merton, F.R.S.; J. C. Witt; Henry Moore, C.H.; Denis Mahon; Sir William Coldstream, C.B.E.; The Viscount Chandos, P.C., D.S.O., M.C.; Field-Marshal Sir Gerald Templer, G.C.B., G.C.M.G., K.B.E., D.S.O.

OFFICERS

Director, Sir Philip Hendy £3,400
Keeper, William Gibson ..... £2,100 to £2,400

Restorer, N. S. Brommelle ..... £1,440 to £1,795

NATIONAL PORTRAIT GALLERY

St. Martin's Place, Charing Cross Road, W.C.2
[Whitehall: 8511]

Open Monday to Friday 10 to 5. Saturday 10 to 6. Sunday 2 to 6.

The first grant was made in 1856 to form a gallery of the portraits of the most eminent persons in British history, the collections being successively housed in Great George Street, Westminster, in

South Kensington, and in Bethnal Green. The present building was opened in 1896, £80,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £1,669 for purchase of portraits, was estimated at £29,010 for 1957–58.

Director, Keeper and Secretary, C. K. Adams, C.B.E. £2,250

Assistant Keepers (I), D. T. Piper; J. F. Kerslake £1,175 to £1,850

TATE GALLERY

Millbank, S.W.1

[Tate Gallery: 4444]

Hours of opening.—Weekdays 10 to 6. Sundays 2 to 6. Admission free, except to certain temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The Tate Gallery, which constitutes the National Collection of British painting, of modern foreign painting and of modern sculpture, was opened in 1897, the cost of erection (£80,000), being defrayed by the late Sir Henry Tate, who also contributed the nucleus of the present collection. The *Turner Wing*, built at the expense of Sir Joseph Duveen and his son, Lord Duveen, was opened in 1910. There are also special collections by Blake, Watts and Alfred Stevens. Lord Duveen also defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. Expenses for 1957–58 were estimated at £59,563.

Director and Keeper, Sir John Rothenstein, C.B.E., ph.D. £2,800

Deputy Director, N. R. Reid £1,940 to £2,220

Deputy Keeper, R. E. Alley £1,820 to £2,100

Assistant Keepers (Grade I), Mary Chamot; Judith Cloake; D. L. A. Farr; M. R. F. Butlin.

Men, £1,175 to £1,850; *Women*, £1,000 to £1,755

BRITISH OVERSEAS AIRWAYS CORPORATION

B.O.A.C. Headquarters, London Airport, Hounslow, Middlesex
[Skyport: 5511]

Established in 1939. British Overseas Airways Corporation acquired, on April 1, 1940, the air transport undertakings of Imperial Airways and British Airways, which had been at the disposal of the Secretary of State for Air since the outbreak of war.

B.O.A.C. is the larger of the two Government Corporations which are charged with the task of developing and operating British scheduled air transport services under the provisions of the Air Corporations Act, 1949. Its functions are to operate the Commonwealth and Empire, North Atlantic, South Atlantic and Far Eastern routes from the United Kingdom. In June, 1958, the Corporation was operating forty-six routes, with a gross route mileage of nearly 240,000. On these routes there were nearly a hundred services weekly in each direction, and the mileage covered was more than 860,000 per week.

The members of the Corporation are appointed by the Minister of Transport and Civil Aviation.

Chairman, Sir Gerard d'Erlanger, C.B.E. (*Allowances* £1,000) £5,000
Deputy Chairman, Sir George Cribbett, K.B.E., C.M.G. (*Allowances* £500) £7,500
Member (*full-time*), B. Smallpeice (*Managing Director*.....£5,000
Members (*part-time*), J. W. Booth; Sir Francis Brake; H. L. Newlands, M.B.E.; The Lord Rennell, K.B.E., C.B.; The Lord Tweedsmuir, O.B.E., each £1,000; Sir John Stephenson, C.B.E. (*unpaid*).

BRITISH TRANSPORT COMMISSION

222 Marylebone Road, N.W.1
[Ambassador: 7711]

The British Transport Commission was established as a public authority under the provisions of the *Transport Act*, 1947. On Jan. 1, 1948, the main-line railways of Great Britain, together with their ancillary services, the smaller railway undertakings previously under the jurisdiction of the Railway Executive Committee, the railways and road services formerly controlled by the *London Passenger Transport Board*, and various canal and inland waterway undertakings specified in the Act, were vested in the Commission. In accordance with the 1947 Act the Commission acquired road haulage undertakings which in 1946 were engaged in carriage of goods involving routes of 40 miles, or upwards, and necessitating journeys beyond a 25 miles radius from the operating centre. Under the provisions of the *Transport Act*, 1953, however, the Commission was required to dispose of a major part of the property held by it for the purposes of the part of its undertaking carried on through the Road Haulage Executive. The 1953 Act also provided for the re-constitution of the Commission, the abolition of the Railway Executive and the reorganization of the railways. On and from Oct. 1, 1955, all the functions of the Railways, the Road Haulage, the Docks and Inland Waterways and the Hotels Executives, respectively, were assumed by the Commission. From Jan. 1, 1955, six regional Area Boards were established and separate managements were set up for docks and inland waterways.

Chairman, Gen. Sir Brian Robertson, Bt., G.C.B., G.B.E., K.C.M.G., K.C.V.O., D.S.O., M.C.....£10,000
Deputy Chairman, Sir John Benstead, C.B.E. ..£8,000
Members, J. Ratter, C.B.E.; The Lord Rusholme; A. B. B. Valentine; J. W. Watkins, C.V.O., D.S.O., M.C.; Sir Reginald Wilson, *each* £7,500.

Part-time Members, H. P. Barker; Sir Ian Bolton, Bt., E.B.E., H.M.L.; D. H. Cameron of Lochiel, T.D.; R. F. Hanks; T. H. Summerson; Sir Philip Warter; Sir Cecil Weir, K.C.M.G., K.B.E., M.C. (*each* £1,000).
Secretary General, Maj.-Gen. Ll. Wansbrough-Jones, C.B., C.B.E.
Chief Secretary, S. B. Taylor.

Secretary, M. T. Howard Williams, M.B.E.

North Eastern Area Board
Railway Headquarters Offices, York
[York: 53022]

Chairman, T. H. Summerson.
Members, J. W. Armit, Ph.D.; T. Bowman, O.B.E.; G. H. Kitson, O.B.E.; L. H. McRobert, C.B.E., T.D.; P. D. Priestman, O.B.E.; Sir George Walton, K.B.E., C.B.
Secretary, C. H. Rafton.

Scottish Area Board
302 Buchanan Street, Glasgow, C.2.
[Douglas: 2900]

Chairman, Sir Ian Bolton, Bt., O.B.E., H.M.L.
Members, The Lord Binsland, K.T., M.C.; D. H. Cameron of Lochiel, T.D.; Sir John Denholm, C.B.E.; P. L. Meldrum; Sir Hugh Rose, Bt., T.D.; W. G. N. Walker.
Secretary, H. M. Herbert.

Southern Area Board
Waterloo Station, S.E.1
[Waterloo: 5151]

Chairman, Sir Philip Warter.
Members, J. E. Binks; H. F. B. Iles; H. L. R. Matthews, C.B.E.; K. Preston; J. MacN. Sidey, D.S.O.; A. B. B. Valentine.
Secretary, L. Mapleston.

Western Area Board
Paddington Station, W.2
[Paddington: 7000]

Chairman, R. F. Hanks.
Members, Hon. Anthony Berry; A. Chamberlain, M.C., T.D.; P. T. Heady; F. A. Parish, C.B.E.; Sir John Carew Pole, Bt., D.S.O., T.D.; J. Ryan C.B.E., M.C.
Secretary, A. H. Curtis Welch.

BRITISH TRAVEL AND HOLIDAYS ASSOCIATION

Headquarters and Tourist Information Centre
Queen's House, 64/65 St. James's Street, S.W.1
[Mayfair: 9191]

Overseas Offices

British Travel Association: 336 Madison Avenue, New York; 39 South La Salle Street, Chicago 3; 606 South Hill Street, Los Angeles; 50 Young Street, Sydney; 229 Collins Street, Melbourne; 90 Adelaide Street West, Toronto; 6 Place Vendome, Paris; 22 Neue Mainzerstrasse, Frankfurt/Main; Leidseplein 29, Amsterdam; Norrmalmstorg 1, Stockholm C.

The functions of the Association can be summarized as follows: (*a*) to increase the number of visitors from overseas and (*b*) to ensure that overseas visitors and home holiday makers are well received and accommodated and have the best facilities that can be provided. The Association is a Company limited by guarantee and registered under the Companies Act and draws its membership from all sections of the tourist and holiday industry. The Association is supported by H.M. Government and receives a Grant-in-Aid from the Board of Trade. The Board consists of a Chairman who is appointed by the President of the Board of Trade, and 19 members, 8 of whom are nominated by the President of the Board of Trade: 7 are elected by the members of the Association and the remainder nominated by the Scottish Tourist Board (*a*), the Welsh Tourist and Holidays Board (*x*) and the Northern Ireland Tourist Board (*x*). Four additional members representing the various interests concerned with travel and holidays in the United Kingdom may be appointed. The Board has the advice of 3 main Committees: the Finance and General Purposes Committee, Tourist Development Committee and the Holiday Development Committee, whose Chairmen are drawn from the Board. The Tourist Development Committee and Holiday Development Committee draw a proportion of their membership from the Board and the remainder from interested organizations.

Chairman, Sir Arthur Morse, C.B.E.
Director-General, J. G. Bridges, O.B.E.
Deputy Director-General, L. J. Lickorish.

Chief Clerk and Establishment Officer, S. P. Anderson, M.B.E.

CABLE AND WIRELESS LIMITED

Head Office—Mercury House, Theobald's Road, W.C.1

[Chancery: 4433]

Under the Commonwealth Telegraphs Act, 1949, the assets of the telecommunications services conducted by Cable and Wireless, Ltd., in the United Kingdom were transferred to the Post Office. The company, however, continues to be responsible for the operation of its telecommunications services overseas and to own the assets relative to those services.

Cable and Wireless, Ltd., operates overseas telecommunications services, comprising 147,000 nautical miles of submarine cables and 120 wireless circuits. Its operations include telegraphy (cable and radio), phototelegraphy, radiotelephony, shipshore radiotelegraph including direction finding, aeronautical wireless facilities, internal telephone systems, and broadcasting services in Kenya. It has 105 branches overseas and a Cable Station and Training School in the United Kingdom.

The Company was formed in 1929 (as Imperial and International Communications, Ltd., the name being changed in 1934) to unify the oversea communications of the Empire, consequent upon the Imperial Wireless and Cable Conference of 1928. The Commonwealth Telecommunications Conference, 1945, recommended the acquisition of the services in the U.K. and the other self-governing countries of the Commonwealth by their respective governments, with an unifying Commonwealth Telecommunications Board to replace the existing advisory Commonwealth Communications Council. Cable and Wireless, Ltd., was therefore acquired (under the *Cable and Wireless Act*, 1946) by the U.K. Government as from January 1, 1947, new directors being appointed.

Chairman, Sir Godfrey Ince, G.C.B., K.B.E. £3,500 (and expenses up to £350)

Managing Directors, N. C. Chapling, C.B.E.; H. H. Eggers, C.M.G., O.B.E. £4,000 each (and expenses up to £200 and £150 respectively)

Other Directors, C. N. Gallie (£1,000); K. Anderson, C.B., C.B.E.; Col. D. McMillan, O.B.E. *unpaid*

Secretary, F. H. Lansbury, O.B.E.

Engineer-in-Chief, C. J. V. Lawson.

Traffic Manager, E. G. L. Howitt, M.B.E.

Chief Accountant, H. G. Thomas, O.B.E.

Staff Manager, E. Mockett, O.B.E.

CHARITY COMMISSION

Ryder Street, St. James's, S.W.1.

[Whitehall: 7621]

The Charity Commission was constituted under Act of Parliament in 1853 "for the better Administration of Charitable Trusts" in England and Wales. The powers of the Commissioners over all endowments held for educational purposes have now been transferred to the Minister of Education.

Chief Commissioner, F. W. W. McCombe, C.B., C.B.E. £3,400

Commissioners, R. L. Daniell, C.B.E., £2,350 to £2,700; Sir Hugh Linstead, O.B.E., M.P. ... *unpaid*

Asst. Commissioners and Senior Legal Assistants, O. H. Toyne; W. E. A. Lewis; E. L. Hayes; W. J. Wolfe; I. MacC. Armstrong; J. P. L. Redfern; F. H. Pratt ..... £1,585 to £2,100

Accountant, Official Trustees' Dept., H. A. Anderton, I.S.O. ..... £1,720 to £1,935

Senior Executive Officers, H. O'Neill; A. J. Walker, M.B.E.; L. A. Jimenez ..... £1,350 to £1,605

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

(Hours 9 to 5)

[Whitehall: 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of *Queen Anne's Bounty* (established 1704) and the *Ecclesiastical Commissioners* (established 1836). The main function of the Commissioners is the management of assets of the Church in order to endow and augment benefices, &c., and to carry out many administrative duties in relation thereto.

The Commissioners are required to carry all their revenues (including the income of trust funds and other commitments administered by them) to a general income and expenditure account, the balance of which, after defraying secured charges, continuing grants and the cost of administration, etc., is available for special grants and provisions.

Summary of Income and Expenditure

(For the year to March 31, 1958)

Receipts:	
Estates (net)	£3,698,380
Dividends, interest, etc.	8,092,168
Trust funds	583,400
	£12,373,948
Expenditure:	
Benefices, dignitaries, Church property (including payments out of trust funds) and administration, etc.	£10,772,934
Balance available for special grants and provisions	1,601,014
	£12,373,948

Commissioner and Scientific Adviser, Sir Charles Snow, C.B.E. (*part-time*) £2,500

Commissioner and Engineering Adviser, P. H. L. Thomas £2,700

Assistant Commissioners and Principals, J. W. A. Chorley (£2,100 to £2,400); Mrs. O. K. Collett, O.B.E. (£1,381 to £1,952).

Principal Scientific Officer, L. H. Mann ..... £1,450 to £2,050

Assistant Secretaries, J. W. Lambie; G. W. Tyler, O.B.E. ..... £1,720 to £1,935

Deputy Establishment Officer, A. B. Wares ..... £1,720 to £1,935

Senior Assistant Directors of Examination, F. J. R. Bartlett; K. M. Reader ..... £1,780 to £2,050

Assistant Directors of Examinations, F. Bateman; O. M. C. Buchan; Dr. J. Coveney; W. T. Deakin; Miss B. M. J. Hurden; C. Porteous; Miss A. C. Wanstall; E. J. D. Warne

Men, £1,075 to £1,870; *Women*, £999 to £1,780

Principal Psychologist, K. A. G. Murray ..... £1,630 to £2,020

Chief Superintendent of Examinations, H. Kroll, O.B.E. ..... £1,720 to £1,935

Accountant, C. J. Floyd ..... £1,350 to £1,605

Senior Executive Officers, F. V. Abrams; P. J. M. Fry; W. H. L. Mayer; T. G. Niblett; L. F. Walters ..... £1,350 to £1,605

Civil Service Selection Board

9–10 Savile Row, W.1

Commissioner and Chairman, J. H. T. Goldsmith (*part-time*) £1,800

Assistant Commissioner and Principal, P. A. R. Brown ..... £1,450 to £2,050

Principal Psychologist, Mrs. M. M. M. McArthur ..... £1,546 to £1,922

COLONIAL OFFICE

The Church House, Great Smith Street, S.W.1
[Abbey: 1266]

The business of the Colonies was, until 1801, included in the functions of the Home Secretary, to be transferred in that year to the newly-created "Secretary for War." In 1854 the outbreak of the Russian War led to the appointment of a Secretary of State for the Colonies (to relieve the War Secretary of Colonial business).

Secretary of State for the Colonies, THE RT. HON. ALAN TINDAL LENNOX-BOYD., M.P. £5,000
Principal Private Secretary, J. O. Moreton, M.C.
Private Secretary, J. T. A. Howard-Drake.
Parliamentary Private Secretary, P. H. B. O. Smithers, V.R.D., D.Phil., M.P. ..... *unpaid*

Minister of State for Colonial Affairs, THE EARL OF PERTH, P.C. £3,750
Private Secretary, J. N. A. Armitage-Smith.

Under-Secretaries

Permanent, Sir John Macpherson, G.C.M.G. £6,000
Private Sec., A. C. Whitby.

Parliamentary, J. D. Profumo, O.B.E., M.P. £2,500
Private Sec., A. K. Robertson.

Deputy Under-Secretaries, Sir Hilton Poynton, K.C.M.G.; Sir John Martin, K.C.M.G., C.B., C.V.O. £4,250

Assistant Under-Secretaries, C. G. Eastwood, C.M.G.; W. L. Gorell Barnes, C.B., C.M.G.; W. B. L. Monson, C.M.G.; E. Melville, C.M.G.; A. R. Thomas, C.M.G.; C. Y. Carstairs, C.M.G.; P. Rogers, C.M.G.; H. T. Bourdillon, C.M.G.; A. N. Galsworthy, C.M.G. £3,400

Assistant Secretaries, *N. L. Mayle, C.M.G.; *T. Smith, C.M.G.; J. S. Bennett, C.M.G.; T. B. Williamson, C.M.G.; C. E. Lambert, C.M.G.; E. R. Edmonds, C.M.G.; A. D. Garson, C.M.G.; W. A. Morris, C.M.G.; J. E. Marnham, C.M.G., M.C., T.D.; J. D. Higham, C.M.G.; A. Emanuel, C.M.G.; *W. A. C. Mathieson, C.M.G., M.B.E.; W. I. J. Wallace, C.M.G., O.B.E.; H. A. Harding, C.M.G.; F. D. Webber, M.C., T.D.; N. D. Watson; B. O. B. Gidden (*Establishment and Organization Officer*); F. Kennedy, O.B.E.; *A. M. MacKintosh, C.M.G.; J. K. Thompson; R. J. Vile; J. W. Vernon; H. P. Hall, M.B.E.; W. D. Sweaney; J. C. Morgan; O. H. Morris; J. M. Kisch; I. B. Watt; A. Campbell; A. H. Sheffield; T. C. Jerrom ..... £2,100 to £2,700

COMMONWEALTH RELATIONS OFFICE

Downing Street, S.W.1
[Whitehall: 2323]

In July, 1925, a new Secretaryship of State for Dominion Affairs was created, and as a result the Dominions Office was set up, to take over from the Colonial Office business connected with the self-governing Dominions, the self-governing Colony of Southern Rhodesia and the South African territories (Basutoland, Bechuanaland Protectorate and Swaziland) and business relating to the Imperial Conference.

In July, 1947, the titles of the Secretary of State for Dominion Affairs and the Dominions Office were altered to the Secretary of State for Commonwealth Relations and the Commonwealth Relations Office respectively. As from August 15, 1947, the Secretary of State for Commonwealth Relations assumed responsibility for relations with India and Pakistan and as from February 4, 1948, for relations with Ceylon.

On September 3, 1953, the self-governing Colony of Southern Rhodesia became part of the Federation of Rhodesia and Nyasaland, and the Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and the Federation.

The Secretary of State for Commonwealth Relations assumed responsibility for relations between the United Kingdom and Ghana as from March 6, 1957 and between the United Kingdom and the Federation of Malaya as from August 31, 1957.

Secretary of State for Commonwealth Relations, THE EARL OF HOME, P.C.....£5,000
Private Sec., D. L. Cole, M.C.

Patel (*India*); A. A. Ansari (*Pakistan Observer*); A. Perera (*Ceylon*); G. T. Anstey, C.B. (*Rhodesia*); W. J. Bigg, C.M.G. (*Other Commonwealth Territories*).
Secretary-General, W. W. Shaw-Zambra, C.V.O., C.B.E., T.D.

CONSERVANCY BOARDS

THAMES CONSERVANCY

2-3 Norfolk Street, Strand, W.C.2
[Temple Bar: 4982]

The Conservation of the River Thames was granted to the Lord Mayor of London in 1487, and delegated to 12 Conservators in 1857, the powers being reconstituted in 1894. The Port of London Authority, by an Act of 1908, took over, as from March 31, 1909, all rights, powers, and duties of the Conservators in respect of the river below Teddington. In 1932 the various Acts relating to the Conservators were repealed and a consolidating Act (The Thames Conservancy Act, 1932) was passed. This Act was amended by the Thames Conservancy Act, 1950, which extended the powers of the Conservators, made further provision for their revenue, and increased the number of Conservators to 38. The Conservators are also the Drainage Board of the Thames Catchment Area.

Chairman, Sir Jocelyn Bray.
Vice-Chairman, Sir Humphrey Haslam, O.B.E.
Secretary and Solicitor and Parliamentary Officer, G. E. Walker.
Chief Engineer, H. C. Bowen, O.B.E., T.D.
Treasurer and Accountant, E. A. James.

LEE CONSERVANCY CATCHMENT BOARD

Brettenham House, Lancaster Place
Strand, W.C.2

This Board was established by the *Land Drainage Act*, 1930, as the flood prevention authority for the Lee watershed, which covers an area of about 600 square miles. Since January 1, 1948, it has also been responsible for the prevention of pollution (by the exercise of powers under the *Lee Conservancy Acts*, 1868-1938, and the *Rivers (Prevention of Pollution) Act*, 1951) and for fisheries. The Board consists of 20 members, one of whom is appointed by the Minister of Agriculture, Fisheries and Food, the remainder being appointed or elected by local authorities in the Catchment Area.

Chairman, E. R. Spragg, O.B.E.
Vice-Chairman, T. H. Joyce.
Clerk of the Board, J. L. Spiller, D.F.C.
Engineer, N. Medrington.
Treasurer, W. E. Adams.
Protection of Water Officer, F. W. Swain.

FORTH CONSERVANCY BOARD

Instituted by the Forth Conservancy Order Confirmation Act, 1921, for the preservation, maintenance and improvement of the River and Firth of Forth within the limits prescribed in the Order.
Chairman, The Earl of Mar and Kellie.
Clerk and Treasurer, M. D. Kennedy, W.S., 14 Princes Street, Falkirk.
Engineers, Messrs. Leslie & Reid, C.B., 53 Manor Place, Edinburgh.
Marine Superintendent, Capt. E. Roynon-Jones, R.N.

Royal Exchange 6th Floor, Manchester 2

Established under the Cotton Industry Development Council Order, 1948.

Chairman, The Lord Rochdale, O.B.E., T.D.

Other Independent Members, W. D'Arcy Madden, C.B.E.; O. Bertoya.

Members representing the Employers, W. T. Winterbottom, C.B.E.; J. M. H. Grey; W. Crossley; G. D. Hughes.

Members representing Employees, C. Schofield, O.B.E.; Sir Alfred Roberts, C.B.E.; L. T. Wright; L. Sharp, M.B.E.

Director-General, J. Broatch.

CROWN ESTATE COMMISSIONERS

Whitehall, S.W.1

[Trafalgar: 2211]

THE CROWN ESTATE (formerly The Crown Lands).—The Land Revenues of the Crown in *England and Wales* have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or *Civil List*. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1958, the total Receipts by the Commissioners were £3,074,672. The Expenditure (including Property Tax allowed) was £1,641,908. The sum of £1,440,000 was paid to the Exchequer in 1957–58 as *Surplus Revenue*, being a net sum from which no deductions have to be made for administration.

The Land Revenues in *Ireland* have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in *Scotland* were transferred to the Commissioners in 1833.

First Commissioner and Chairman (part-time), Sir Malcolm Trustram Eve, Bt., G.B.E., M.C., T.D., Q.C.

Second Commissioner (and Secretary), R. M. J. Harris, C.B., M.V.O. £4,250

Commissioners (part-time), M. F. Berry; The Earl of Bradford, T.D.; D. H. Cameron of Lochiel, T.D.; W. C. Farnsworth, C.B.E.; Sir Edward Gillett; The Lord Williams.

Deputy Commissioner, J. A. Hillman, C.B.E. ..£2,400

Assistant Commissioner, H. A. C. Gill £2,250

Crown Estate Surveyor, L. E. C. Osborne ..£2,400

Deputy Crown Estate Surveyor, C. A. Gardner £1,780 to £2,050

Chief Executive Officers, F. E. J. Behn, O.B.E.; T. J. Lester, O.B.E.; E. J. Pedlar, I.S.O. £1,720 to £1,935

Accountant and Receiver-General, C. P. Ellwood £1,350 to £1,605

Senior Executive Officers, A. P. Brooks; J. Griffiths; R. E. Mildren; F. V. Mills. ... £1,350 to £1,605

Legal Adviser (part-time), Sir Francis Enever, C.B., M.C.

Senior Legal Assistant, J. G. Allan. £1,500 to £2,000

Solicitor, Scotland, N. C. Grant.

Windsor Parks and Woods

Surveyor and Deputy Ranger, Sir Eric Savill, K.C.V.O., C.B.E., M.C.

BOARD OF CUSTOMS AND EXCISE

King's Beam House, Mark Lane, E.C.3

[Mansion House: 1515]

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" in the Custom House, Lower Thames Street, E.C.3, replacing that built by Charles II and rebuilt after destruction by fire in 1718 and 1814. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on April 1, 1909.

The Board

Chairman, Sir James Crombie, K.C.B., K.B.E., C.M.G. £6,000

Private Sec., B. H. Knox.

Deputy Chairman, Sir Douglas Owen, K.B.E., C.B. £4,250

Commissioners, C. H. Blake; G. Imms; K. B. Pepper *(Joint Secretaries)* £3,400

Director of Establishment and Organization and Commissioner, J. E. B. Finlay, O.B.E., T.D. £3,400

London Waterguard

Superintendent of Waterguard, W. H. Powell, O.B.E. £2,200

MINISTRY OF DEFENCE

Storey's Gate, S.W.1

[Whitehall: 7000]

The Ministry of Defence was formally constituted on January 1, 1947, under the *Ministry of Defence Act,* 1946, which provides that the Minister "shall be in charge of the formulation and general application of a unified policy relating to the Armed Forces of the Crown as a whole and their requirements."

These responsibilities are further defined in a White Paper *Central Organization for Defence* (Cmd. 6923) issued in October 1946 as including—

(*a*) The apportionment, in broad outline, of available resources between the three Services in accordance with the strategic policy laid down by the Defence Committee. This includes the framing of general policy to govern research and development and the correlation of production programmes;

(*b*) The settlement of questions of general administration on which a common policy for the three Services is desirable;

(*c*) The administration of inter-Service organizations such as the Imperial Defence College, the Joint Services Staff College, Amphibious Warfare Headquarters and the Joint Intelligence Bureau.

To these have since been added responsibilities arising from United Kingdom participation in international defence organizations.

The Minister of Defence is the Deputy Chairman of the Defence Committee of the Cabinet. The Prime Minister is the Chairman.

Minister of Defence, THE RT. HON. DUNCAN SANDYS, M.P. £5,000

DEVELOPMENT COMMISSION
3 Dean's Yard, Westminster, S.W.1
[Abbey: 1277]

The Development Commission was established and constituted under the *Development and Road Improvement Funds Act*, 1909, and the amending Act of 1910. The Act of 1909 as affected by the *Forestry Act*, 1919, the *Ministry of Transport Act*, 1919 and the *Fisheries Act*, 1955, empowers the Treasury, on the recommendation of the Development Commission, to make advances by way of grant or loan to Government departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life; and secondly to promote the development and improvement of fisheries by a variety of means, including the promotion of research, both marine and freshwater.

Chairman, The Countess of Albemarle, D.B.E.
Other Commissioners, Lt.-Col. Hon. R. E. B. Beaumont, T.D.; †C. I. C. Bosanquet; L. K. Elmhirst; Prof. Sir James Gray, C.B.E., M.C., Sc.D., LL.D., F.R.S.; J. L. Longland; J. Sullivan, C.B.E.; W. J. Wright, C.B.E.
Secretary, F. S. O. Broughton . . . £2,100 to £2,700

NATIONAL DOCK LABOUR BOARD
22–26 Albert Embankment, S.E.11

The National Dock Labour Board administers the scheme for giving permanent employment to dock workers under the *Dock Workers (Regulation of Employment) Act*, 1947.
Chairman, The Lord Crook.
General Manager and Secretary, M. R. Haddock, O.B.E.
Assistant General Manager, J. H. C. Pape.
Chief Accountant, H. C. Harper, O.B.E.

THE DUCHY OF CORNWALL
Buckingham Gate, S.W.1
[Victoria: 7346–7]

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council
H.R.H. The Prince Philip, Duke of Edinburgh, K.G., K.T., G.M.B.E.; The Earl of Radnor, K.C.V.O. (*Lord Warden of the Stannaries*); Sir Edward Peacock, G.C.V.O. (*Receiver General*); The Earl Fortescue, K.G., C.B., O.B.E., M.C.; The Earl Waldegrave; Brig. The Lord Tryon, K.C.V.O., D.S.O.; Hon. Charles Russell, Q.C. (*Attorney-General of the Duchy*); Sir John Carew Pole, Bt., D.S.O.; P. G. T. Kingsley, C.V.O. (*Secretary*).

Other Officers of the Duchy of Cornwall
Auditor, W. E. Parker, C.B.E.
Solicitor, B. B. D. Stopford.
Asst. Secretary, G. H. H. Syms, M.V.O.
Deputy Receiver, R. F. H. Adams.
Sheriff (1958–59), Maj.-Gen. E. G. W. W. Harrison, C.B., C.B.E., M.C.

THE DUCHY OF LANCASTER
Lancaster Place, Strand, W.C.2
[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1265. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

Chancellor of the Duchy of Lancaster, The RIGHT HON. CHARLES HILL, M.D., M.P. £5,000
Private Secretary, Miss B. M. Shedden.
Vice-Chancellor, Sir Leonard Stone, O.B.E.
Attorney-General and Attorney and Serjeant within the County Palatine of Lancaster, E. Milner Holland, C.B.E., Q.C.
Receiver-General, Brig. The Lord Tryon, K.C.V.O., D.S.O.
Clerk of Council and Keeper of Records, R. Somerville, C.V.O.
Solicitor, K. R. E. Taylor, C.V.O.
Chief Clerk, E. R. Wheeler, M.B.E.
Registrar, Manchester District, R. A. Forrester.
Do. Liverpool District, W. E. Helsby.
Do. Preston District, W. E. Helsby.

THE COUNTY PALATINE OF DURHAM
Registrar's Chambers, St. Nicholas Court, Market Place, Durham

It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the

Norman Conquest. William I., in reorganizing his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection and defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Norham and Islandshire (roughly the northern quarter of Northumberland) and Bedlingtonshire. Palatinate rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of co-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers on behalf of the Crown.

Chancellor, His Hon. James Neville Gray, D.S.O., Q.C.
Attorney-General, G. de P. Veale, Q.C.
Solicitor-General, G. S. Waller, O.B.E., Q.C.
Registrar of Chancery Court, Lt.-Col. H. L. Swinburne.

MINISTRY OF EDUCATION

Curzon Street, W.1
[Mayfair: 9400]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. The cost of administration for the financial year 1958 was estimated at £4,741,373.

Minister of Education, THE RT. HON. GEOFFREY WILLIAM LLOYD, M.P. £5,750
Principal Private Sec., D. H. Morrell £1,410 to £2,000

ELECTRICITY AUTHORITIES

THE ELECTRICITY COUNCIL

Trafalgar Buildings, S.W.1

(Whitehall: 2121)

Winsley Street, W.1

(Museum: 4040)

The Electricity Act, 1957, provided for the dissolution of the Central Electricity Authority, as from Jan. 1, 1958, and for the allocation of its duties and powers to an Electricity Council and a Central Electricity Generating Board. These bodies were set up on Sept. 1, 1957, and as from Jan. 1, 1958, all liabilities and obligations of the Central Authority in respect of British Electricity Stock issued before that date were tranferred to the

Electricity Council, and all property, rights, liabilities and obligations which before that date pertained to the Central Authority, with certain exceptions which by agreement under the Act vested in the Council, were transferred to the Generating Board.

Electricity Council

Chairman, Sir Henry Self, K.C.B., K.C.M.G., K.B.E. £10,000

Secretary, A. A. Wallace.

EXCHEQUER AND AUDIT DEPARTMENT

Audit House, Victoria Embankment, E.C.4
[Fleet Street: 8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of monies provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

Comptroller and Auditor General, Sir Edmund Compton, K.B.E., C.B. £6,000
Private Secretary, G. H. Burch.
Secretary, P. J. Curtis, C.B.E. £3,400

REGISTRY OF FRIENDLY SOCIETIES (CENTRAL OFFICE) AND OFFICE OF THE INDUSTRIAL ASSURANCE COMMISSIONER

17 North Audley Street, W 1
[Mayfair: 7001]

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Scientific Societies Act, the Trustee Saving Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act, the Superannuation and other Trust Funds (Validation) Act and the Prevention of Fraud (Investments) Act. Under the Industrial Assurance Acts, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

Chief Registrar and Industrial Assurance Commissioner Sir Cecil Crabbe £4,250
Private Sec., Miss M. E. Blake.

Investigations Branch (Head), A. E. M. Brook ..... £1,350 to £1,605
Disputes Branch (Head), J. Bellingham ..... £1,350 to £1,605

Registry of Friendly Societies, Scotland

19 Heriot Row, Edinburgh, 3
[Edinburgh: Waverley: 4371]

Assistant Registrar, J. Craig, W.S.

THE GAS COUNCIL

1 Grosvenor Place, S.W.1
[Sloane: 4554]

The Gas Council was set up by the Gas Act, 1948, to advise the Minister of Power on the affairs of the gas industry and to assist the Area Boards in the discharge of their functions. It is responsible for the creation and issue of British Gas Stock.
Chairman, Col. Sir Harold Smith, K.B.E. (£8,500).
Deputy Chairman, Sir Henry Jones, M.B.E. (£7,500).
The Members are the Chairmen of the 12 Area Gas Boards.

Area Gas Boards

Twelve Area Gas Boards are established by the Act. The assets and liabilities of former Gas Undertakings vested on May 1, 1949, in these Boards which are responsible for the manufacture and distribution of Gas and for the production of residuals.

Chairmen

Scottish, S. Smith, C.B.E.
Northern, E. Crowther, C.B.E.
North Western, D. P. Welman.
North Eastern, Dr. R. S. Edwards.
East Midlands, R. S. Johnson, M.B.E., T.D.
West Midlands, G. le B. Diamond, C.B.E.
Wales, T. Mervyn Jones.
Eastern, Sir John Stephenson, C.B.E
North Thames, M. Milne-Watson, C.B.E.
South Eastern, W. K. Hutchison, C.B.E.
Southern, C. H. Leach.
South Western, C. H. Chester, C.B.E. ... each £6,500

Gas Consultative Councils

Twelve Gas Consultative Councils were set up by the Minister of Power, one for the area of each of the Gas Boards, to represent the interests of consumers. These Councils deal with specific complaints and consider matters of general interest to the consumer. Under the Act the Area Boards are required to inform the Councils of their general plans and arrangements. Each Council Chairman is an *ex officio* member of his Area Board.

Chairmen

Scottish, Sir Robert Nimmo.
Northern, J. Hoy, M.B.E., B.E.M.
North Western, R. M. Bradburn.
North Eastern, H. Sutcliffe.
East Midlands, A. H. Wood.
West Midlands, J. H. Lewis, O.B.E.
Wales, Maj. C. G. Traherne, T.D.
Eastern, Lt.-Col. R. I. Musson, M.C.
North Thames, E. Bayliss.
South Eastern, Dame Alix Meynell, D.B.E.
Southern, F. C. Rea, O.B.E.
South Western, Sir Colin Campbell, O.B.E.

GENERAL REGISTER OFFICE

(England and Wales)
Somerset House, W.C.2
[Temple Bar: 2407]

The Registration of Births, Marriages and Deaths is believed to have been inaugurated by Thomas Cromwell in 1522, but it was not until 1837 that the General Register Office was established, when a system of civil registration of births, marriages and deaths was introduced in England and Wales. In 1926 provision was made for the registration of still-births, for the re-registration on the Registrar General's authority of the births of legitimated persons and for the maintenance of a register of adopted children. The Registrar General controls the local registration officers appointed under the consolidating Registration Service Act, 1953, in the execution of their duties, which are set out mainly in two consolidating Acts, the Marriage Act, 1949 and the Births and Deaths Registration Act, 1953. These duties relate to the registration of births, still-births and deaths, the correction of registers, the civil preliminaries to marriage, the solemnization and registration of civil marriages and the registration of certain Nonconformist marriages. Central records of births, still-births, marriages and deaths are maintained at Somerset House.

The Registrar General is also responsible for the collection, processing and analysis of statistics relating to population, fertility, births, marriages, deaths and diseases and for the arrangements for the periodical census of population.

Officers

Registrar General, E. M. T. Firth, C.B. £3,600
Establishment Officer and Deputy to Registrar General, A. E. Joll (*Establishments, Accounts, International and General, Statistics, Census and Publications*) £2,100 to £2,700

Actuaries, W. Elrick; Miss I. A. Laurence; W. M. Low; L. V. Martin; J. R. Patterson; C. M. Stewart; W. W. Webb ..... £1,720 to £2,050

THE GOVERNMENT CHEMIST

(Government Laboratory)
13 Clements Inn Passage, Strand, W.C.2
[Chancery: 6331]

In 1842 a laboratory was established by the Board of Excise (later the Board of Inland Revenue) for the purpose of checking the adulteration of tobacco and subsequently for the examination of all excisable commodities. In 1875 the Board of Customs formed a laboratory for duties connected with its responsibilities under the *Food and Drugs Act* and in the assessment of revenue on imported materials. These two laboratories were amalgamated in 1894 as the Government Laboratory, the facilities of which were then made available to other Departments for advice and assistance on chemical matters. In order to promote the centralization, as far as possible, of all Government Chemical work and to place all Departments on the same footing as regards its services, the Laboratory was constituted as a separate Department in 1911 under the Government Chemist.

Besides having statutory functions under the *Food and Drugs Act* and the *Fertilisers and Feeding Stuffs Act*, the Department carries out analytical, advisory and investigatory chemical work for most other Government Departments.

Government Chemist, G. M. Bennett, C.B., SC.D., F.R.S. £3,350
Deputy Government Chemist, E. H. Nurse, C.B.E. £2,450 to £2,750

Minister in Charge, RT. HON. A. H. E. MOLSON, M.P.
Secretary, Brigadier G. A. C. Macnab, C.B., C.M.G. £2,500

MINISTRY OF HEALTH

Savile Row, W.1
[Regent: 8411]

The Ministry of Health was established by the *Ministry of Health Act*, 1919, to exercise in England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commission. Responsibility for the National Health Insurance and the Widows', Orphans' and Old Age Contributory Pensions Schemes was transferred to the Ministry of National Insurance on April 1, 1945. The functions of the Ministry relating to local government, rating and valuation, public health, housing, rent control, burials and coast protection were transferred to the Ministry of Housing and Local Government on January 30, 1951. The responsibility for hospitals, limb-fitting, the supply of surgical appliances and certain treatment services formerly undertaken by the Ministry of Pensions was assumed on August 31, 1953. Since 1955 the Ministry has assumed responsibilities for food hygiene and welfare foods which were previously carried out by the Ministry of Food. On May 1, 1957, responsibility for certain aspects of the recruitment of nurses and midwives was transferred from the Ministry of Labour and National Service to the Ministry of Health. The main administrative divisions in the Ministry of Health deal with general practitioner services; nursing; general relations with various health professions; Local Authority health and welfare services; hospitals and specialist services; mental health services; nutrition, and international health.

NATIONAL HEALTH SERVICE

(For main article, *see* Index)

Regional Hospital Boards

England and Wales are divided into 14 hospital regions, each with its own Regional Hospital Board which administers the hospital and specialist services in the area. The Regional Hospital Boards do not, however, administer Teaching Hospitals, which have their own Boards of Governors.

The Chairmen and members of Regional Hospital Boards and Boards of Governors are appointed by the Minister of Health in accordance with the third schedule to the National Health Service Act, 1946.

Areas

Newcastle, Benfield Road, Newcastle upon Tyne 6. *Chairman*, E. F. Collingwood, C.B.E., Ph.D., D.Sc. *Secretary*, R. Dobbin.

ROYAL COMMISSION ON HISTORICAL MONUMENTS (ENGLAND)

34 Chester Terrace, Regent's Park, N.W.1.
[Welbeck: 7711]

The Royal Commission on Historical Monuments (England) was appointed in 1908 to survey and publish in inventory form an account of every building, earthwork or stone construction up to the year 1714. The terminal date was extended after the late war to 1850. The Commission has published up to present date inventories covering nine counties. It is a purely recording body and while the Commissioners may recommend that certain structures should be preserved, they have no power to implement their recommendations.

Chairman, The Marquess of Salisbury, K.G., P.C.
Commissioners, Miss Rose Graham, C.B.E., D.Litt., F.S.A.; Sir Cyril Fox, D.Litt., Ph.D., F.B.A., F.S.A.; Walter Godfrey, C.B.E., F.R.I.B.A., F.S.A.; H. S. London, F.S.A.; Sir Albert Richardson, K.C.V.O., P.A., Litt.D., F.S.A., F.R.I.B.A.; Professor I. A. Richmond, C.B.E., D.Litt., LL.D., F.B.A., F.S.A.; Sir James Mann, K.C.V.O., B.Litt., F.B.A., F.S.A.; The Earl of Shaftesbury, P.C., K.P., G.C.V.O., C.B.E., LL.D.; Professor V. H. Galbraith, F.B.A.; Professor S. Piggott, F.B.A., F.S.A.; W. Godfrey Allen, F.S.A., F.R.I.B.A.; Lord Digby, D.S.O., M.C., T.D.; Sir John Summerson, C.B.E., F.B.A., F.S.A., A.R.I.B.A.; Professor H. C. Darby, O.B.E., Ph.D.; Christopher Hussey, F.S.A.; C. A. Ralegh Radford, F.B.A., F.S.A.; Prof. J. G. D. Clark, Ph.D., F.B.A., F.S.A.; Prof. F. Wormald, Litt.D., F.B.A., F.S.A.
Secretary, G. F. Webb, C.B.E., F.B.A., F.S.A. . . £2,200

ROYAL COMMISSION ON ANCIENT AND HISTORICAL MONUMENTS OF SCOTLAND

7 Coates Gardens, Edinburgh 12
[Edinburgh: 65113]

The Commission was appointed in 1908 to make an inventory of the Ancient and Historical Monuments of Scotland from the earliest times to 1707, and to specify those that seem most worthy of preservation. The terms of reference were extended by Royal Warrant dated Jan. 1, 1948, to cover the period since 1707 at the Commissioners' discretion.

Chairman, The Earl of Wemyss and March, LL.D.
Commissioners, Prof. I. A. Richmond, C.B.E., LL.D., D.Litt., F.B.A., F.S.A.; Prof. S. Piggott, F.B.A., F.S.A.; W. Douglas Simpson, O.B.E., D.Litt., F.S.A.; I. G. Lindsay, O.B.E., R.S.A., F.R.I.B.A.; Prof. W. C. Dickinson, M.C., LL.D.; G. P. H. Watson, M.B.E., F.R.I.B.A., R.S.W.; Mrs. A. I. Dunlop, O.B.E., Ph.D., D.Litt., LL.D.
Secretary, K. A. Steer, Ph.D., F.S.A. £2,000

HOME OFFICE

Whitehall S.W.1
[Whitehall: 8100]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and Her subjects, and between the U.K. Government and the Government of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—The maintenance of law and order; the efficiency of the police service; the treatment of offenders, including juvenile offenders; the efficiency of the Probation Service; the organization of Magistrates' Courts; legislation on criminal justice; the supervision of the Fire Service; the preparations for Civil Defence Services; the care of children by local authorities and voluntary societies; the regulation of the employment of children and young persons; the control and naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, byelaws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonials and formal business connected with honours.

CENTRAL OFFICE OF INFORMATION

Hercules Road, Westminster Bridge Road, S.E.1 [Waterloo: 2345]

The Central Office of Information came into being on April 1, 1946, as a non-Ministerial Department with a separate vote; it operates in England and Wales, the regional work in Scotland being undertaken by the Scottish Home Department, and in Northern Ireland by the Government of Northern Ireland. The Department performs common technical and production functions, and gives specialized assistance and advice to other departments, for both home and overseas publicity purposes. Some of its principal functions are: (*a*) To act as the central Government agency for the preparation of publicity material required by departments, such as films, press and poster advertising, photographs, books, pamphlets and magazines and exhibitions; to maintain liaison with departments on their publicity requirements; and to provide technical advice and assistance, both at home and overseas. (*b*) To undertake publicity as required on home matters of interdepartmental scope. (*c*) To provide a daily service of comment and background information for the use of press officers and other British representatives overseas. (*d*) To provide a regional publicity organization in this country for the use of departments requiring such services. (*e*) To provide the machinery in this country for the central issue of Government news.

Director-General, T. Fife Clark, C.B.E..... £4,250

Private Secretary, Miss E. M. Butler, M.B.E.

BOARD OF INLAND REVENUE

Somerset House, W.C.2
[Temple Bar: 2407]

The Board of Inland Revenue was constituted under the Inland Revenue Board Act, 1849, by the consolidation of the Board of Excise and the Board of Stamps and Taxes. In 1909 the administration of excise duties was transferred to the Board of Customs. The Board of Inland Revenue is responsible for the management and collection of income tax, surtax, profits tax, estate duty, stamp duties and other direct taxes, and also for the valuation of freehold and leasehold property for Inland Revenue taxation, for certain purposes on behalf of other Government Departments and public authorities and, in England and Wales, for local authority rating. Salaries and expenses of the Board for 1958/59 are estimated at £44,820,000.

The Board
Chairman, Sir Alexander Johnston, K.B.E., C.B. £6,000

MINISTRY OF LABOUR AND NATIONAL SERVICE

8 St. James's Square, S.W.1
[Whitehall: 6200]

The office of Minister of Labour was created by the *New Ministries and Secretaries Act*, 1916, which provided for the transfer to the Ministry of Labour of certain of the duties of the Board of Trade. Under the *Minister of National Service Order*, 1939, the title of the Ministry was changed to the Ministry of Labour and National Service and the offices of Minister of Labour and National Service are held by the same Minister. The principal functions of the Ministry of Labour and National Service are: (1) Administration of the *Employment and Training Act*, 1948, and provision of facilities and services for the purposes of assisting persons to select, fit themselves for, obtain and retain employment suitable to their age and capacity, of assisting employers to obtain suitable employees, and generally for the purpose of promoting employment in accordance with the requirements of the community, including the operation of, (*a*) a national system of Employment Exchanges; (*b*) the Technical and Scientific Register and Nursing Appointments Offices; and (*c*) Government schemes for vocational training. (2) Central administration through the Central Youth Employment Executive of a comprehensive Youth Employment Service, which may be provided locally either by the local education authority under a scheme approved by the Minister or the Ministry's local office. (3) Collection and publication of labour statistics including statistics of manpower, employment and unemployment, wage rates, earnings, hours of labour, retail prices, household expenditure, industrial disputes, employers' and employees' organizations and industrial accidents and diseases. (4) Manpower policy and co-operation with other Government Departments on matters of general employment policy including the distribution of industry and the maintenance of a high and stable level of employment. (5) Registration, medical examination and calling-up of men under the *National Service Acts*; deferment and postponement of call-up; reinstatement in civil employment. (6) Resettlement in civil employment of men called up under the National Service Acts or released from service in the Regular Forces. (7) Administration of the *Disabled Persons (Employment) Act*, 1944, to enable disabled persons to secure employment, including provision where necessary of courses of industrial rehabilitation and vocational training. (8) Administration and enforcement of the *Factories Acts* 1937 and 1948, and the *Employment of Women and Young Persons Act*, 1936, and dealing generally with questions concerning the safety, health and welfare of workpeople in factories and certain other premises. (9) Administration of the *Anthrax Prevention Act*, 1919 and of the Government Wool Disinfecting Station at Liverpool. (10) Dealing with industrial relations, i.e. questions affecting relations between employers and employed, in particular with: (*a*) assistance in the prevention or settlement of industrial disputes, including the administration of the *Conciliation Act*, 1896, the *Industrial Courts Act*, 1919, and the *Industrial Disputes Order*, 1951; (*b*) administration of the *Wages Councils Acts*, 1945 to 1948; (*c*) administration of the *Catering Wages Act*, 1943, (*d*) administration of the *Baking Industry (Hours of Work) Act*, 1954, and (*e*) encouragement of good personnel management and of arrangements for joint consultation in industry. (11) Employment of foreign workers in Great Britain. (12) Dealing with labour policy in the international field, including relations with the International Labour Organization, and with overseas questions concerning labour and employment. (13) Agency work for other Government Departments in connexion with National Insurance, National Assistance, repayment of income tax to unemployed persons and the issue of passports.

The gross amount for the services administered by the Ministry (Parliamentary Vote, Class VI. 9) was estimated at £24,877,000 for the year ending March 31, 1959, reduced by Appropriations in Aid to a net sum of £21,087,000. The gross estimate is made up as follows: Salaries, £15,786,000 for Headquarters Departments and Outstations: £376,000 for travelling, etc., expenses: £320,000 for telegraph and telephone services and £75,500 for incidental administrative expenses; £72,900 for Adjudication, Advisory Services, etc.: £6,864,500 for Employment, Training and Rehabilitation, including £3,667,000 for special facilities for seriously disabled persons; £480,000 for expenses in connexion with National Service; £575,000 for repayment of loan charges in respect of Employment Schemes; £306,500 in connexion with the International Labour Organization, including a subscription to the Organization of £278,000; and £20,600 for other services. The appropriations in aid amounting to £3,790,000 include estimated repayments of some £3,200,000 for agency services.
